Manufacturers of Garage, Airport and Fire Door Hardware

DANVILLE, ILL.

Products

OVERHEAD CARRIERS.
DOOR HANGERS and HINGES.
GARAGE and AIRPORT DOOR HARDWARE.
INDUSTRIAL and FIRE DOOR HARDWARE.

TRADE-MARK

Also manufacturers of:
Rolling Ladders.
Pitching Shoes and Stakes.
Certified Malleable Iron Castings.

For Allith Stadium Seat Brackets, see Manufacturers' Index

AIRPORT DOOR HARDWARE

Straight Sliding Doors on Bottom Rollers

Straight sliding rollers on bottom rail are preferable

Round-a-Corner Doors Carried on Bottom Rail

The ideal arrangement for large openings; doors

Typical Installation of No. 7090 Roller

Typical Installation of No. 7092 Roller

for extremely large and heavy doors especially where they are over ten feet in width. These doors are carried on industrial rail embedded in concrete to give rigid support. Vertical adjustment is provided to insure weather tight closing. Doors carried on this equipment slide straight back from the center of the opening past the sides of the building, allowing a clear opening. The track may be laid on single or parallel runs. The tops of the doors are guided by rollers between the guides incorporated in the overhead construction. These guides extend past the sides of the building to some form of support provided. In some designs the front piers are of a size to permit stacking door in a pocket within the pier.

All our bottom rollers are equipped with genuine Timken bearings. Note big rugged axle shaft

inside out of the wind and weather, when open. When they are in closed position they are under the roof and inside of the walls proper. In operating they are simply pushed around the corner on a curved track and stand along the sidewall. The roller frames for these doors are designed to permit adjustment after installation, for lining up of doors and to take care of unevenness of the track. This feature insures weather tight closing. The wheels rotate on Timken bearings and are machine turned to insure concentric treads. The pivot shafts are in Timken bearings to insure free turning as well as to forestall the possibility of the wheels climbing the rails of the curve. All bearings are equipped with Alemite fittings for easy lubrication.

Typical Installation of No. 7050 Roller

Typical Installation of No. 7062 Roller

Airport Door Roller Details

Rollers No. 7090 (without wheel lock) and 7090 W. L. (with wheel lock) are identical in size and the following Details are correct for both.

When wheel lock roller is used provision should be made in the spacing of track centers to allow at least $\frac{1}{2}$ in. more space in order to clear the foot trip.

On straight sliding door installations it is customary to use multi-parallel tracks, in which case each door is then equipped with one roller with the wheel lock (7090 W. L.) and one roller without wheel lock (7090).

Top rollers No. 7076 or 7077 shown on the following page are recommended for use with these bottom rollers.

Rollers No. 7092 (without wheel lock) and 7092 W. L. (with wheel lock) are identical in size, and the following Details are correct for both.

For installations with doors rolling round the corner—the placement of floor tracks, curves and top guides calls for special layout data in order to provide proper clearances of all door edges regardless of position and travel. Allith has this data in blue print and will gladly furnish information to interested architects and engineers, or will work out any special problem where door handling is under consideration.

Weathering plates for complete weathertightness around mortise in which bottom rollers are bolted are considered by Allith of as much importance as the rolling action of the wheels. We do not use rubber or fabric than can deteriorate. Allith weathering plates are of embossed steel and secured to door or roller in such a way as to prevent any pinching, binding or interference in the action of the door rollers.

Details for No. 7092WL Bottom Roller

Top Hung Round-a-Corner Type

Where the doors are not too heavy for supporting from the overhead construction, it is oftentimes most economical to use top hung doors.

Door arrangement featured above provides means for rolling doors around the corner, out of the way, along sidewalls. A passage door is hinged to each jamb to swing independent of doors on hangers. Three tracks are shown, as this arrangement keeps doors stacked ahead of roof truss. Where there is no truss interference, a single run of track down each sidewall is recommended.

Top Hung Straight Sliding Type

A simple and most practical way of fitting hangar doors when space will permit the track beyond the sides of the building.

When considering this straight sliding—top hung method—it is necessary to use doors of a weight that will not place a strain on the overhead construction and for this reason, openings having a width of more than 50 ft. per opening should be equipped with the bottom roller equipment.

Complete Details on Request

No. 1306 Flush Door Pull

No. 1306
Flush Door Pull

Made of two parts of certified malleable iron. The flush or mortised side is set into the steel plate of the door while the raised pull is bolted to the opposite side. These pulls are large and sturdy so full strain may be applied without danger of bending. Two flush pulls may be used together on doors with plates on each side.

No. 2239 Cremone Bolt

This bolt is especially designed for very high doors. It is used on the swing door next to the jamb. The guides are provided with adjustments allowing the doors to swing well under the header. Flush handle is set in the plate on the outside of the door. All cast parts are made of certified malleable iron and the rods are made of the highest grade steel. Vibration will not cause the bolt to change from locked to unlocked position or vice versa.

No. 2239
Cremone Bolt

No. 7046 Top Bumper

No. 7046
Top Bumper

Top Bumpers for direct attachment to overhead guides are most suitable for use in preventing doors from rolling past their proper position in closing. Also highly desirable at back of pocket space.

Ample bearing surface on angle enables Allith Top Bumpers to withstand more than the usual abuse without causing damage to the doors.

No. 7076 Top Guide Roller for Tubular Doors

No. 7076
Top Guide Roller

Malleable wheels are made in diameters varying from 3 to 8 in. as specified; equipped with graphite bronze self-lubricating bearings. Axle shafts are 1 in. in diameter. Specify size of tubing to be used.

No. 7077 Top Guide Roller for Channel Iron Doors

No. 7077
Top Guide Roller

Malleable wheels are made in diameters varying from 3 to 8 in. as specified; equipped with graphite bronze self-lubricating bearings. Axle shafts are 1 in. in diameter. Specify width of channel used.

Note: With all of these top guide rollers allow at least $\frac{1}{4}$ in. clearance on each side of wheel. Thus the diameter of wheel will be $\frac{1}{2}$ in. less than spacing between top guides.

No. 7164 Top Guide Roller

No. 7164
Top Guide Roller

Allith Guide Rollers for straight sliding doors and single angle guide are of the swivel type to produce free movement even though angle may be somewhat distorted.

Made in sizes and types for either channel or tube doors and for all usual door thicknesses.

No. 7135 Top Guide Roller

• No. 7135
Top Guide Roller

Guide Rollers for round-the-corner doors and single angle guide must incorporate proper weathering. The weathering wing on No. 7135 is so designed as to travel freely on curves and to assure perfect weathering when doors are in closed position.

FOLDING SLIDING GARAGE DOOR HARDWARE "TEN-EIGHTY"

This hardware is designed for folding sliding doors, allowing the doors to fold back at any angle up to 180°, and for use on openings from 6 to 18 ft. wide, depending upon the number of doors used. Single tracks are required for 3, 4, 5 or 6 doors.

With these outfits, doors are hinged together and hung to the jambs and are supported at the upper outer corner by a ball bearing swivel hanger, sliding in a trolley track. This arrangement prevents sagging of doors, and permits the use of all or part of the opening at one time.

Space required between the inside wall and car when doors swing open or shut is governed by the width of one door only. When closed, doors fit against the stops in the same manner as a house door, making the opening weatherproof.

This equipment may be applied to the outside of an opening, though protection for the doors when open should be arranged for.

No. 60-X track with adjustable brackets is regularly furnished with No. 1080 equipment. The hangers are of malleable iron construction with vertical and horizontal adjustment, roller bearing metal wheels and ball bearing swivel.

See page following for details.

No. 1081 similar to above but of heavier construction.

No. 71-X track with heavy adjustable brackets and hangers is furnished for medium weight doors. Specify No. 1081 equipment.

See page following for details.

No. 67-X track with heavy adjustable brackets and hangers is furnished for extra heavy doors. Specify No. 1082 equipment.

See page following for details.

Three-door Outfit Type "3D"—For openings 6 to 9 ft. wide. Two doors hinged together and attached to one jamb, while the third or passage door is hinged to the opposite jamb. Type 3D1 slides and folds all three doors to one jamb.

Four-door Outfit—For openings 8 to 12 ft. wide. Made in two combinations as follows:

Two doors hinged to each jamb, or three doors hinged to one jamb and one door hinged to opposite jamb.

Five-door Outfit—For openings 10 to 15 ft. wide. Two doors hinged together and hinged to one jamb and three doors hinged together and hinged to opposite jamb.

Six-door Outfit—For openings 12 to 18 ft. wide. Three doors hinged to one jamb and three doors hinged to opposite jamb.

Accordion Door Hangers

Hangers have certified malleable iron frames; roller bearing wheels, ball bearing swivels, anti-friction guide rollers, and vertical adjustments.

General Directions—*Plan Type No. 1* uses a half door at one side of opening with all doors folding and sliding to one jamb. Recommended practice is to use four-wheel hangers (No. 69, 117 or 64) and apply them to alternate doors. When the two-wheel hangers are used (No. 1069, 1117 or 1064), they should be applied to each full door.

A passage door, full size, may be hinged to the opposite jamb.

Where doors in the opening are to be folded each way from center, use half doors at each jamb, and arrange the full doors in same manner as in above plan.

Plan Type No. 10 uses full doors throughout, arranged to fold and slide in units of two doors, each door having a two-wheel hanger (No. 1079, 1127 or 1074).

Detail shows casing stops applied on both sides and extending across the opening except for the distance equal to width of two doors, plus the combined thickness of all doors, at the end where first door is pivoted to the jamb. This space without stops permits only two doors to fold, and the operation of doors is to fold the two doors at pivoted end first. This will give a clear space into which the next unit of two doors is slid—still not folded—when this unit reaches the clear space these doors will fold flat like the first pair. Each unit thereafter is slid along until the clear space is reached and the folding of the doors is repeated.

This set is the smoothest running and the most easily operated form of accordion doors.

DETAILS OF ACCORDION DOOR HANGERS

Labeled Sliding and Swinging Fire Door Hardware

Allith Labeled fire door hardware is regularly inspected and labeled under the supervision of the Underwriters' Laboratories, Inc., under the direction of the National Board of Fire Underwriters, and is also approved by the inspection department of the Associated Factory Mutual Fire Insurance Companies.

All cast parts are made of certified malleable, possessing twice the strength of gray iron castings and greater efficiency than wrought iron. The steel used in such parts as are made of steel is all carefully selected for the purpose intended.

Horizontally sliding doors, inclined track rather than level track, are preferable to swinging doors, for they occupy practically no room, and the openings are easily kept clear from obstructions for their successful operation.

Types—Allith Labeled sliding and swinging fire door hardware is furnished to meet practically every requirement. Unless otherwise specified, hangers, track brackets and fixtures will be furnished for three-ply (2 $\frac{5}{8}$ in.) doors.

For detailed information on fire door hardware see our Catalogue No. 87-C.

If opening is square top, 12-in. headroom is required at edge of opening toward which door slides in closing, and $\frac{3}{4}$ in. more for every foot of track.

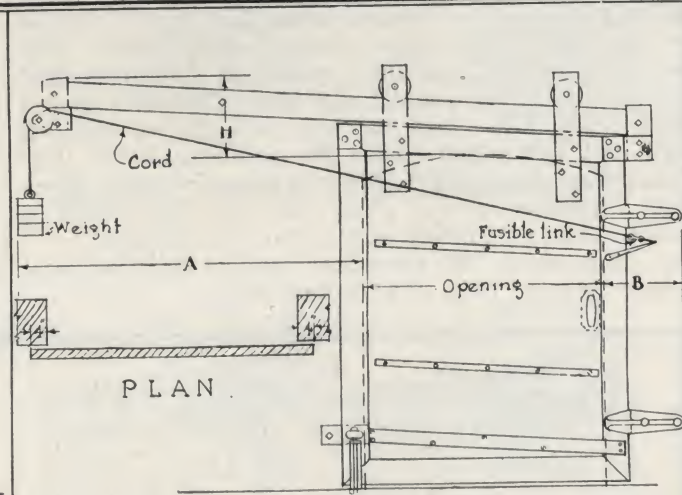

If opening is arched top, 12-in. headroom is required above top of arch and $\frac{3}{4}$ in. more for each foot of track from the center of opening.

Straight Sliding Warehouse Door Hangers

No. 3 Rigid Hanger—Standard for fire doors. Similar to No. 6 Hanger but made in one piece, without the adjustment features of No. 6 Hanger. Length over all 21 in.

No. 6 Double Adjustable Hanger—Approximate capacity 1000 lb. For doors $1\frac{3}{4}$ to $3\frac{3}{8}$ in. thick. These hangers have a vertical adjustment of $1\frac{1}{2}$ in. Hanger is made of certified malleable iron, fitted with large easy running, roller bearing wheels. Used on freight stations, garages, warehouses, etc., it has no equal.

No. 17 Double Adjustable Tandem Hanger—Approximate capacity 2000 lb. For doors $1\frac{3}{4}$ to $3\frac{1}{2}$ in. thick. The hanger frame is 15 in. wide by 28 in. long; wheels $4\frac{3}{4}$ in. in diameter with hardened steel bushings and roller bearings. The axles are fitted with grease cups. The hanger is adjustable up and down, also in or out. The No. 27 is the same except that it has a short apron only $7\frac{1}{2}$ in. high, to go on cross rail above panels. In ordering, always specify thickness of doors.

Parallel Door Equipment

This outfit is designed for insuring perfect movement of continuous parallel doors, such as are used in freight stations, warehouses, public garages, etc. It is arranged to permit an opening at any place desired.

The track shown in the illustration is assembled in sections to accommodate different openings. It is suitable for attaching to any construction. Installation is simple and alignment perfect. The parting strip fastened between the brackets and extending below top of door makes the equipment stormproof as well as the strongest.

For wooden floors, $\frac{1}{2}$ -in. thick bars are used as floor guides; for concrete floors, $2\frac{1}{4}$ x $2\frac{1}{4}$ -in. angles.

Showing Application of Parallel Door Equipment

THE COLUMBUS ROLLING DOOR CORPORATION

Manufacturers of Columbus "Rol-Up-Over" Doors

TELEPHONE
ADAMS 1749

COLUMBUS, OHIO

Product

COLUMBUS "ROL - UP - OVER"
GARAGE and INDUSTRIAL SERVICE
DOORS.

For Columbus Steel Rolling
Doors and Shutters, see Manufac-
turers' Index.

Columbus "Rol-Up-Over" Doors

These doors are adaptable to public and residential garages and many types of industrial buildings, such as terminals, warehouses and factories, as well as hospitals and power stations where quiet operation and daylight are essential. This type of door is especially convenient in modern superservice stations where greasing lifts are used.

Materials

Because of the engineering features embodied in Columbus "Rol-Up-Over" Garage and Industrial Doors, all wood parts are standardized as per the following specification regardless of width or height of door. The continuous hinged strut members (patents applied for) which are used on all doors, are so designed that all possibility of deflection or warpage is eliminated and excessive wind pressure guarded against adequately. Lumber is of the best grade, free from knots and all parts are mortised and tenoned, glued and doweled with steel dowels, thoroughly sanded ready for paint or varnish. Sections are rabbeted $\frac{5}{16}$ in. deep on each rail making a shiplap waterproof joint.

Metallic Structure

Rollers—Pressed steel ball bearings.

Sheaves—Either cast grey or pressed steel operating on steel roller bearings.

Hinges—Continuous weather-proof hinges are 18 gauge cold rolled steel tooled to 10/1000ths in.

Track—Standard throughout, of special design 14 gauge cold rolled steel (.095). Track angle $2 \times 1\frac{1}{2} \times \frac{1}{8}$ -in. margin.

Castings and Stampings—All castings, except sheaves, are malleable iron; stampings 8 gauge USS. or over, tumbled and pickled, all movable parts are heavy cold rolled tool steel.

Door Sections

Columbus "Rol-Up-Over" Doors up to 7 ft. 1 in. are made with three panels; 7 ft. $1\frac{1}{2}$ in. to 9 ft. 4 in. have four panels; 9 ft. $4\frac{1}{2}$ in. to 11 ft. 6 in. have five panels; 11 ft. $6\frac{1}{2}$ in. to 13 ft. $9\frac{1}{2}$ in. have six panels; 13 ft. 10 in. to 16 ft. $11\frac{1}{2}$ in. have seven panels. No door section exceeds 30 in. in width.

Any number of sections may be made for glass at added cost but each standard door is made with one section for glazing. Panes of glass are standardized, 10 in. wide and 18 in. high, but special sizes may be had if necessary. Double strength glass is recommended.

Locking Device

A strong malleable iron bolting device is used on one side of door only, bolting through a slot in the track and controlled by a standard cylindrical lock designed to be master-keyed with the house if desired.

Full Inside View of Closed Door
Note the hinges

Angular View of Half Open Door
Nothing overhead but the tracks

Specifications

The door [doors] shall be Columbus "Rol-Up-Over" Doors as made by THE COLUMBUS ROLLING DOOR CORPORATION, of Columbus, Ohio.

The door [doors] shall be of the "Rol-Up-Over" type, consisting of four or more hinged sections supported on ball bearing rollers, floating on a fixed pin in a curved track, operated (a) manually, (b) electrically or (c) by chain hoist.

The rails, stiles and muntins shall be 1½ in. No. 1 fir, vertical grain old growth soft yellow or No. 1 vertical grain spruce; panels ⅝ in. three-ply flat fir veneer glued with casein weatherproof glue pinned with steel dowels. Sections shall be hinged with special weatherproof continuous hinges of 18 gauge cold rolled steel acting as struts, strengthening the door construction and preventing deflection when door is placed in open horizontal position.

The top section of the door shall be equipped with a radial arm to insure smooth operation in all positions of door structure and to provide a means of clamping the door against the jambs when in a closed position.

(Note: This radial arm is not used on vertical lift jobs where overhead tracks are two or more feet above lintel.)

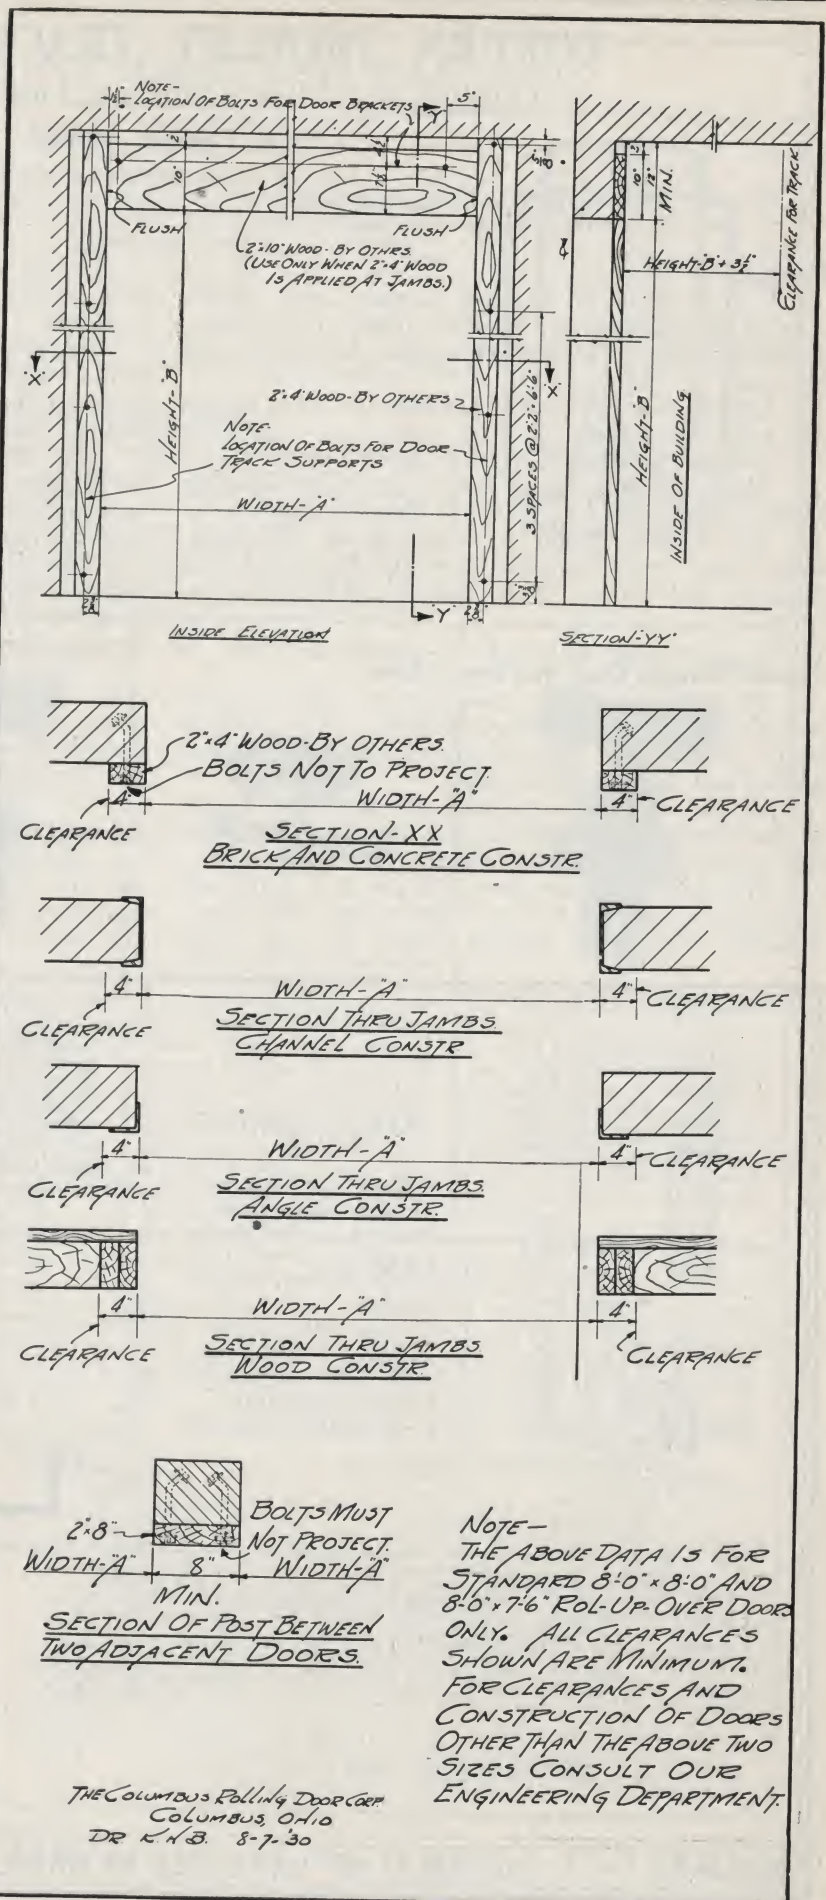

The track shall be adjustable laterally in relation to the face of the wall and the vertical track, and shall be mounted on 2x1½x½-in. angle continuous supporting members.

The door shall be accurately counterbalanced to properly equalize the tension of the lifting cables (a) by a single tension spring stretched parallel to the inside face of the wall above the lintel (or in case of door larger than 8x8 in.) (b) by a helical torsion spring mounted on a shaft parallel with face of wall seated in brackets above the lintel. Door and spring shall be connected by special high tensile strength airplane cable operating over suitable sheaves on all sizes up to 64 sq. ft., or on special drums in larger sized doors where helical torsion counterbalance is used.

Spring counterbalance shall be covered and protected by an iron hood shaped to enclose spring mechanism and fastened to brackets at either end of spring or shaft.

Locking device shall consist of supporting member lock bar and lock gear of malleable iron, controlled by cylindrical lock (which may be master keyed if required) to bolt through slot in the track and to be automatic in action.

(Note: White pine or any other special wood may be had on the architect's specification at an advanced cost. Any or all sections may be specified for glass at added cost.)

COBURN FOLDING SLIDING GARAGE DOOR HARDWARE, COBURN STRAIGHT SLIDING GARAGE DOOR HARDWARE including TRACKS, HANGERS, BRACKETS and HINGES.

COBURN No. 750 STYLE HANGERS for heavy garage and warehouse doors.

COBURN FOLDING PARTITION HARDWARE.

Also manufacturers of Overhead Track Conveying Systems and Rolling Ladders for high shelving.

For Coburn Metal Covered Doors, Windows, Frames and Trim, Standard Tin Clad Fire Doors and Shutters and Folding Partitions, see Manufacturers' Index.

Coburn Garage Door Hardware Sets

These hardware sets contain all the items required to erect the doors in working condition. They are made up for two different types of door opening; the folding sliding and the straight sliding.

In the *folding sliding* types, the doors are hinged to the jamb and supported at the upper outer edge by ball bearing swivel hangers sliding in a trolley track.

With this outfit, the doors fold and slide to the side, fit perfectly tight and will not warp or sag. This type is specially adapted to garages where the full width

of the door opening should be available and where the space between door jamb to the sidewall on each side is limited.

In the *straight sliding* types the tracks are parallel to the wall, the doors sliding to either side as the plan views of the designs indicate. In this type only part of the width of opening is available.

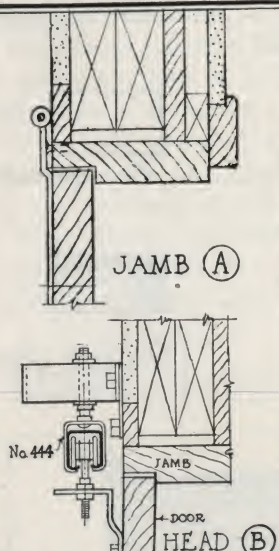

The standard equipment included in each set is listed under the description. All carriage bolts, lags and woodscrews required for the fastening of the different units are furnished with the set.

In case a service door is used, the ordinary lock will be required as shown, and if two service doors or swinging doors are used, as in the 6-door outfit, a cremone bolt or top and bottom bolt may be used.

The COBURN TROLLEY TRACK MFG. Co. can furnish butts, locks and all hardware required to make a complete equipment or, if desired, these items can be purchased elsewhere, the COBURN TROLLEY TRACK MFG. Co. furnishing only the track, brackets, and hangers.

Co-operative Service

Our Engineering Service Department is available at all times for a satisfactory solution of perplexing door problems. This service rendered to architects, engineers, contractors, owners without charge or obligation.

No. 444 Door Hanger

Has both vertical and lateral adjustments.
For use on garage and other doors which slide and swing to the side, giving a clear opening with a minimum amount of floor space, and still fit in the jambs, making a tight weather-proof job. Not recommended for doors over 3 ft. wide.

No. 444 door hanger has cast iron wheels, steel ball bearings, with turned cold rolled steel ball bearing swivel pendant, forged steel petticoat, steel adjusting and check nuts and steel lock washer.

No. 137 Door Hanger

Has both vertical and lateral adjustments.
For use on garage, barn and warehouse doors. Has machined cast iron wheels, case hardened roller bearings, drop forged steel pendant, machined cold rolled steel adjusting and lock nuts, and stamped steel petticoats.

No. 350 Door Hanger

Has vertical adjustment only.
For use on school, house and garage doors, where doors slide by each other or into a pocket. The No. 350 hanger has machined cast iron wheels, case hardened roller bearings, machined cold rolled steel ball bearing swivel pendant, cast iron adjusting nuts, and forged steel pendant plate.

No. 120 Door Hanger

Has lateral adjustment only.
For use on garage, barn and warehouse doors, where doors run to the side on a single run track. No. 120 hanger has machined cast iron wheels, case hardened steel roller bearings, steel pendant and heavy cast iron petticoat.

MFG. CO.

COBURN GARAGE DOOR HARDWARE

PLATE 3

No. 750 Style Hangers for Heavy Garage or Warehouse Doors

For Large Heavy Doors and Gates Where the Track Will Act as a Structural Support for the Door Over Wide Openings and Where Ease of Operation is Necessary

No opening is too wide or door too heavy to operate on this style of door hanger and track. The track is made of structural steel channels and I-beams and can be made an integral part of the building if desired.

The only limit to the free spans over which this style of track can be used is that of the safe carrying capacity of the structural steel. The size of the track and hanger

required is determined by the strength of the structural section. It should be figured at about 60% of the safe load of beams for the span as recommended in any of the steel handbooks.

The use of this type of hardware becomes an engineering problem and Coburn engineers will gladly co-operate with architects in any particular requirements they may have.

Patented

No. 750 Hanger

Used for straight track only. Wheels are machined cast iron, with hardened steel ball bearings. A cold rolled steel axle and a heavy forged machine steel petticoat give it the required strength for use on very heavy doors

William Skinner & Sons' Garage, Holyoke, Mass.

Patented

Single Channel Track

A single cold rolled steel runway on the lower flange. 2 to 12-in. channels used. The hanger wheel has a minimum clearance between flanges and can not jump off the track

Patented

Double Track I-Beam

Special shaped cold rolled steel runways on the lower flanges. We use 3 to 12-in. I-beams. Runways are securely fastened to flange with machine screws from the bottom

Patented

No. 751 Hanger

Used for straight or curved track. Construction similar to No. 750 except that petticoat is replaced with a heavy forged steel pendant, cold rolled steel ball bearing swivel adjusting nut, lock nut and pendant plate for attaching to door

A Few Typical Applications

Fig. No. 4—Shows a method of attaching channel track to lintel or to a pilaster at the ends. The bolts through the web of the channel can be used for supporting the track but they should be in any event spaced not over 5 ft. on centers to keep the track vertical. Used for light doors not over 2 in. thick.

Fig. No. 5—Shows a method of spacing this channel track out from the wall to compensate for the thickness of doors. This is the method we recommend, for hanging channel track. We have found that $\frac{1}{8}$ in. between the wall and the face of the door to be about the right clearance.

Fig. No. 6—Shows track hung as in Fig. No. 4, but the petticoat offset to compensate for the thickness of doors. While it is advisable to keep the center of the door directly under the center of the track, it is not necessary.

Fig. No. 7—Shows a method of supporting the track from the lintel where the supporting bolts must be carried up from the top of the opening to avoid reinforcements or other obstructions.

Fillers should be placed behind the track every 5 ft. to compensate for the thickness of the doors and keep the track in vertical position.

Fig. No. 8—Shows a method of hanging three parallel runs of track on a structural hanger from the lintel or the ends of the run. If only two runs of track are required the channel track at the right can be omitted.

The exact construction of the supporting bracket can be varied to suit conditions.

Fig. No. 9—Shows a method of hanging three parallel runs of track from the ceiling, where it is impossible to hang same from sidewalls. If only two runs of track are required the channel track at right can be omitted. This is simply a typical method and may be varied to suit requirements.

This type of support was used for a set of 3-speed doors in an opening 37 ft. high for the American News Building, New York.

Fig. No. 10—Shows No. 751 door hanger mounted on channel track and is similar to No. 750, except the wheel is mounted on a ball bearing swivel, which allows the hanger to operate around curves and for corner doors.

THE McCABE HANGER MANUFACTURING CO.

Manufacturers of Sliding Door Hangers and Specialties

MAIN OFFICE AND FACTORY

425-427 West 25th Street
NEW YORK, N. Y.

TRADE-MARK

Products

All types of SLIDING DOOR HANGERS, including:
ELEVATOR DOOR HANGERS.
PARLOR DOOR HANGERS.
ACCORDION DOOR HANGERS.
FOLDING DOOR HANGERS.
BARN DOOR HANGERS.
BRACKETS for Hangers.
SLIDING AND RECEDING WARDROBE DOOR HANGERS.

Also manufacturers of Combination Floor Guide and Weatherstrips, Vertical Bar Elevator Door Locks, Overhead Carrying Devices, Expansion Bolts, etc.

Service

Representatives of this Company are qualified and willing to furnish every possible assistance and co-operation to architects and builders.

You are invited to consult with us about your hanger problems. There is no obligation in receiving authoritative information from our Engineering Department. We are advising constantly how to meet various conditions which arise.

The Company and Its Responsibility

Specialization in the manufacture of door hangers for over thirty years has given this company an unsurpassed understanding of hanger problems.

Every hanger we manufacture has been specially designed to meet a particular condition. Our hangers possess features—found in no other makes—which positively insure superior ease of operation, and a long life without repair. In fine homes and well-constructed buildings everywhere in the United States and abroad—you will find McCabe Hangers silently and efficiently performing their duty. You may be sure that the first cost will be the last when the installation is a *McCabe* product.

Distribution

Our products can be obtained through any hardware dealer.

Disappearing Inter-wall Doors

The use of the disappearing inter-wall door is now becoming more general than ever before.

Partial View of Executive Offices, Chase National Bank, New York, N. Y.

Saving of space is a most desired feature in conference rooms, offices and apartments, and architects are using the space-saving advantages of the inter-wall door, as is shown in the photograph of the offices of one of the new city bank buildings.

You can have the wide opening between rooms when desired, with no doors standing in the way—or the rooms can be very effectively and completely separated if privacy is essential.

The design of the door can be made to harmonize with the woodwork of your rooms.

A 4-in. pocket in the partition wall is all the space required for the use of the inter-wall doors. The U-plate in the rear of the pocket makes it always possible to take out the doors without disturbing any partition woodwork.

House Door Hangers No. 10 and No. 2

Construction Details—No. 2 parlor door track is made of 13 gauge steel, the heaviest gauge used in any house door hanger. The carriages have drop-forged case hardened frames with double ball bearing wheels. Header plates, door plates, stops and guides are of malleable steel.

Pocket construction invariably provides a header, and to screw our header plates in position is the simplest form of erection. The pocket U-plate makes it always possible to get at the tracks. Printed instructions for hanging the doors are furnished in the sets.

Single and Double Sets—Single sets have the tracks arranged in two pieces, the joint coming at the opening edge of the pocket. The tracks are connected with the No. 104 bracket which screws into header plate. Three screws only are furnished on the tracks for single sets.

Double sets have the tracks arranged in two pieces, the joint coming in the center of the opening. Each piece of track has two $\frac{1}{2}$ -inch screws. The end screws are furnished with lifting nuts which slide into U-shaped header plates at the rear of the pockets. Center stops are furnished with the double sets.

Where Used—The No. 10 House Door Hanger is made for the average house door of 150 to 250 pounds. The track is the same as used in the No. 2 Hanger. The carriage frames, header plates and door plates are made of pressed steel.

The No. 2 House Door Hanger is made for the heavier type house door of 300 pounds or over. This hanger has the drop forged carriage frames, header plates and door plates of malleable iron casting.

Doors Operate on the McCabe Hangers, Which Are Especially Designed for Doors Which Disappear into Pockets Between Partition Walls

This type of door has a distinct advantage over the hinged door, as it does not take up the floor space needed for the swinging hinged door, and it is not in the way of furniture or draperies, etc.

Accordion or Folding Door Hangers for Accordion or Folding Partitions

Ball Bearing Swiveled Carriage

The accordion type hanger is used on partitions where the jamb door is half the width of the other doors. There is no floor track required on this partition, as the doors are centrally hung. Flush bolts at the bottom of every other door will hold the partition firmly in place when closing the opening.

Any number of doors may be used and the average width of doors should not exceed 3 feet. Where an entrance is required through the partition, by using an odd number of doors, the odd door will be without a hanger and can be used as a regular hinged entrance.

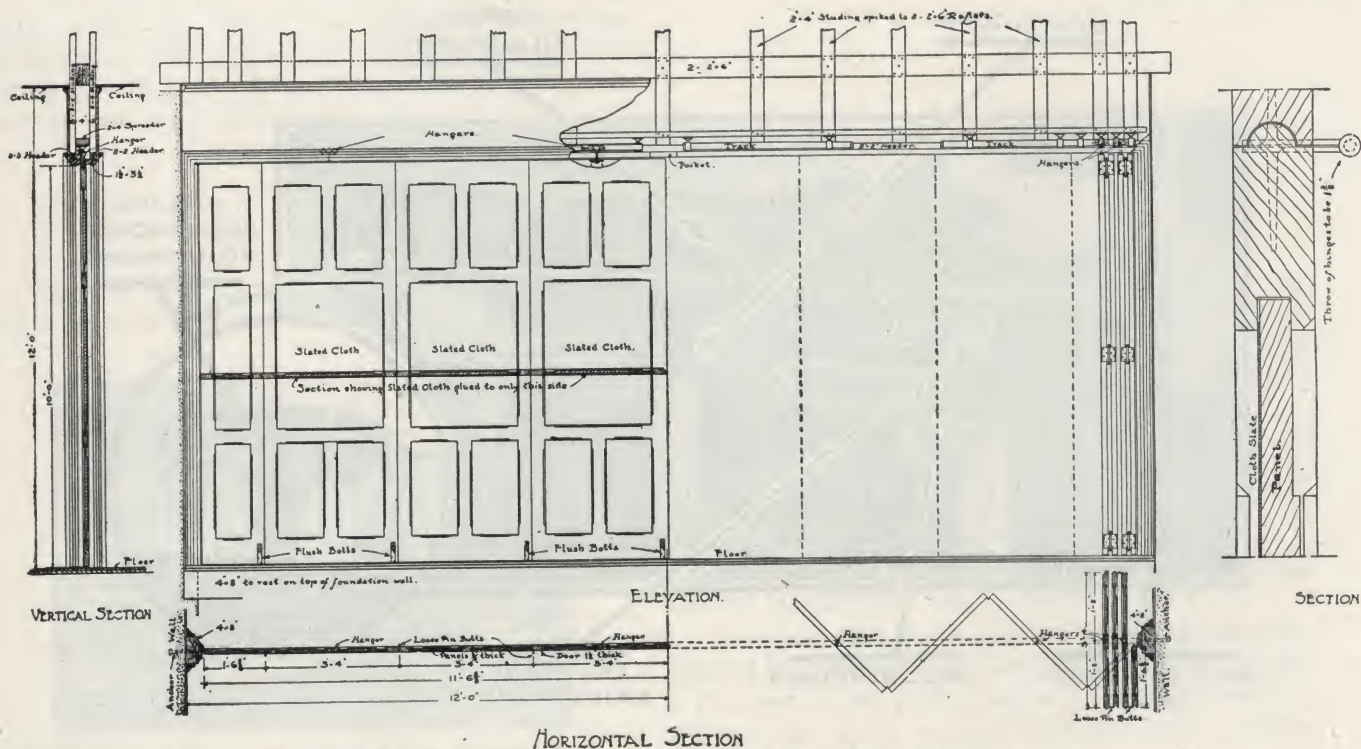

McCabe Accordion Tracks and Hangers

HEADROOM REQUIRED FOR ACCORDION DOOR HANGERS

Carriage No.	Headroom, in.
71	4 1/2
72	4 1/2
73	6 1/2

Section Through Head

Standard Details of Accordion Doors as Hung with McCabe Hangers

Special Folding Door Hangers Nos. 402 and 405*For Use Where All Doors in Partitions Are of Equal Width*

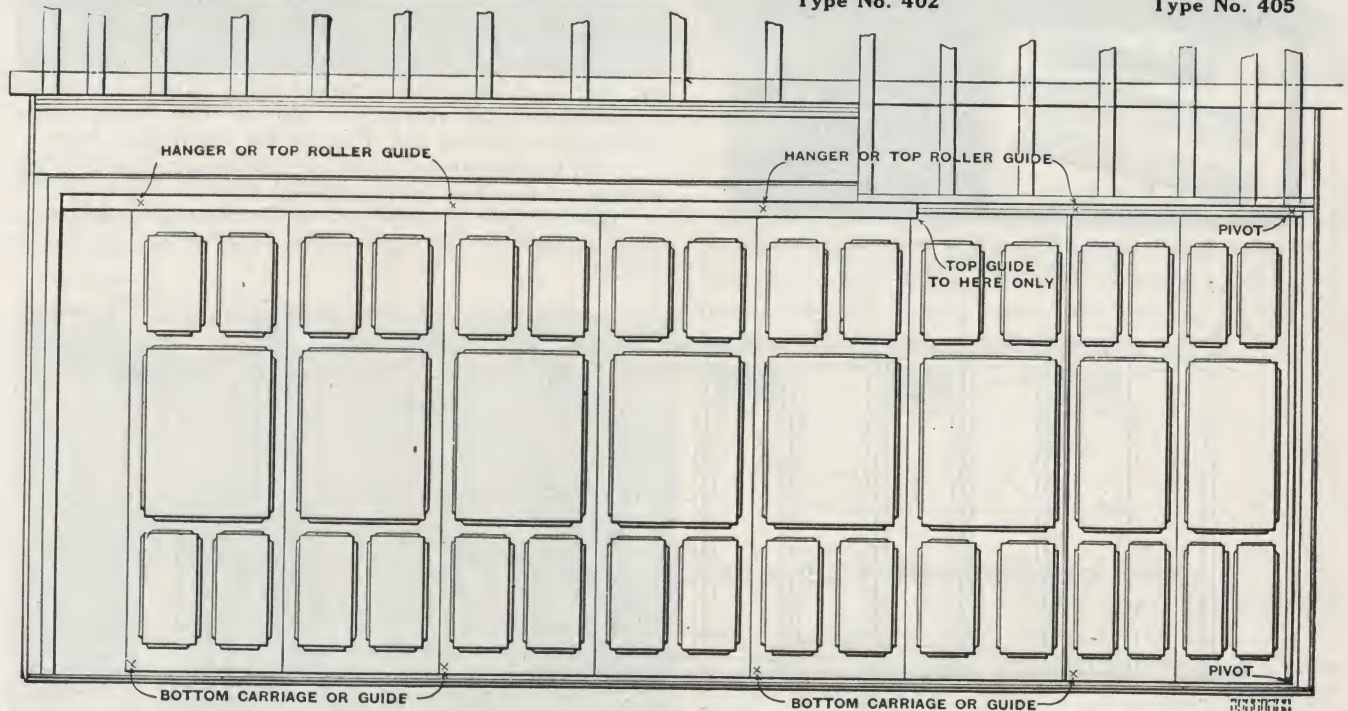

Type No. 402—Used on doors where the regular accordion hanger cannot be used. On this type door the carriage is placed at the end of the door, instead of the center as in the accordion type. The accordion track is used at the top with the accordion carriage; the bottom of the door has a ball bearing guide which runs in special pressed steel channel in the floor.

The doors will fold back as noted on plan and elevation sketch at the bottom of the page. It will be noted that all the doors are hinged together, making the opening and closing of the partition much quicker for the reason that the operator stands at the jamb side of the opening where the doors fold up and is able from this

position to open and close the doors, saving the extra walking back and forth across the opening.

Type No. 405—Used on doors the same as the No. 402 type with the exception that the doors roll on the floor and guide overhead. This type is used where overhead construction is not strong enough to carry door. See cross section for headroom on both types.

How to Specify—Folding partitions to be hung with McCabe No. 402 or McCabe No. 405 Special Folding Hangers.

NOTE:—ALL DOORS MUST BE SAME WIDTH

Standard Details of Folding Doors as Hung with McCabe Special Folding Door Hangers

Parallel Partition Sliding Door Hardware for Dividing Large Rooms

Parallel sliding doors forming movable partitions are used for dividing large rooms into smaller divisions. If the openings are large the doors can be arranged to slide back to each side. If the doors all slide to one side, separate tracks are required for each door.

For doors weighing 500 pounds we supply the No. 2 track with No. 94 carriage. For doors 500 to 1000 pounds we supply the No. 2 track with double-tree hanger. Clevis apron (shown at the right) or the No. 54 plate ($11\frac{1}{2} \times 2\frac{7}{8}$ inches) is furnished with these hangers.

Headroom—Required for double-tree hangers is 7 inches from bottom of header to top of the door. Using No. 94 carriage 5 inch headroom is required.

Typical Installation of Parallel Partition Door Hangers

Sliding Wardrobe Hangers for Use in School Buildings

Typical Installation of Sliding Wardrobe Door Hanger
For use in school buildings

The illustration at the left is a typical installation of McCabe wardrobe door hangers used in school buildings.

One long wardrobe is built, the front of which is closed by alternate stationary and sliding doors. The detail at the bottom of this page shows the sliding door mounted on hangers overhead.

It is advisable to have the outside line of doors the sliding group, and the inside line the stationary group.

All sliding doors are connected on the top with a steel bar, and on the bottom with a steel channel.

One carriage is used on the top center of each sliding door. A small ball bearing roller guide is screwed to the floor, just inside the edge of the doors. This arrangement leaves the floor of the wardrobe clear.

All the wardrobe doors are opened or closed by the sliding of any one of the doors.

How to Specify—Wardrobe doors to be hung with McCabe Sliding Wardrobe Hangers complete with top bar and bottom channel.

Detail for Sliding Wardrobe Hangers

Stage Curtain Hanger Equipment for Center Parting Curtains

Our curtain equipment as illustrated below is used to the best advantage on center parting velours or plush curtains. The tracks should lap in the center of the opening about one foot. The track is supported on the side wall by brackets No. 230/104 and No. 10; if supported on wooden or iron header use brackets No. 16 or 8C.

At one end of one track we mount a double pulley and at the opposite end of the other a single pulley; over which an endless cord passes. We supply floor pulley if desired but it is not necessary.

Do not try to form the folds of the curtain with

the carriages. It is best to arrange the folds as desired, binding off the top with canvas or leather strip, and space the carriages on this binding about 18 inches apart. It is always best to use double carriages with the single ones. The leading carriages on each curtain should be double carriages.

This equipment is used in the leading playhouses, motion picture theatres and school buildings throughout the country.

The track No. 2 is of 13 gauge steel. Carriages are ball bearing and have hard fibre wheels. You will note the felt piece in the construction of the single wheel carriage to avoid noise as the carriages come together when the curtain is pulled back. The pulleys are malleable castings with machine turned grooves, and have double ball bearings.

McCabe Hanger Equipment for Center Parting Curtains

Hangers for Sliding Gates

The illustration below illustrates the use of our No. 2 track and No. 10A carriage for self-closing teller cage doors.

Typical Installation of McCabe Sliding Gate Hangers

The No. 2 track is inclined about 2 inches in the average 6-foot length. It is attached with side wall brackets (see third page following). The No. 10A carriage is ball bearing with steel wheels, and has a riveted pendant which allows the pendant to take a vertical position, although carriage wheels are inclined.

Complete sets are furnished with:

Track No. 2, 6 feet 0 inches.

3 Brackets Nos. 10-11A-11B.

2 Carriages Nos. 10A-31G plate.

Hangers for Collapsible Elevator Gates

The No. 2 track and single wheel carriages are used for collapsible gates on elevator cars.

Track is furnished plain or with three 1/2-inch bolts for the average 6-foot length.

Carriages are ball bearing and have hardened frame, and pendant 1/2-inch diameter, 3/4 inches long, 13 thread. Carriages are furnished with two nuts.

Door Hangers for Doors Weighing Up to 1000 Pounds

To Determine the Weights of Doors—The table below may be used to determine the weights of doors for the purpose of selecting a hanger of the proper strength. Use full thickness of door regardless of paneling.

Material	Weight in pounds of each square foot of door for various thicknesses								
	1 in.	1½ in.	1¾ in.	2 in.	2¼ in.	2½ in.	2¾ in.	3 in.	3½ in.
Pine.....	2.08	3.12	3.64	4.16	4.68	4.95	5.46	6.24	7.28
Oak or ash...	4.00	6.00	7.00	8.00	9.00	9.50	10.50	12.00	14.00
Cypress.....	2.50	3.75	4.36	5.00	5.62	5.93	6.55	7.50	8.75
Whitewood...	2.42	3.63	4.22	4.84	5.45	5.74	6.34	7.26	8.47
Chestnut....	3.42	5.13	5.98	6.84	7.69	8.12	8.97	10.26	11.97

TRACK WEIGHTS, GAUGES AND STOCK LENGTHS

Track No.	Gauge No.	Weight, lb. per ft.	Stock lengths, ft.
1	13	2	3, 4, 5, 6, 8, 10
2	13	2	3, 4, 5, 6, 8, 10, 12
3	12	3	4, 5, 6, 8, 10
4	12	4	4, 6, 8

Note: No. 3 track with brackets spaced every 2 ft. will carry doors weighing from 500 to 700 lb. No. 4 track similarly supported will carry doors weighing from 800 to 1000 lb. For heavier doors use more brackets and double tree carriages.

Nos. 20 and 30 Barn Door Hanger

Barn Door Hangers Nos. 3 and 60

No. 3 Hanger—Designed for heavy warehouse and garage doors up to 800 pounds. The No. 3 track is made of 12 gauge steel. Brackets should be spaced 2 feet apart. Carriages are ball bearing with drop-forged case hardened frames. Wheels $2\frac{3}{8}$ -inch di-

ameter. No. 19 apron 7 inches long, or heavy clevis 9 inches long. Adjustment lateral and vertical. Head room required from top of bracket to top of door is 7 inches.

No. 60 Hanger—For heavy warehouse doors weighing 1,000 pounds per door. No. 4 track self-cleaning is made from 12 gauge steel. Brackets should not be spaced over 2 feet apart. Carriages Nos. 60 and 60A have pressed steel frames, case hardened. Wheels 3-inch diameter with double rows of ball bearings. Adjustable clevis apron (heavy) 9 inches long. Adjustment lateral and vertical. Head room required from top of bracket to top of door is $7\frac{1}{2}$ inches.

No. 3 Barn Door Hanger

No. 60 Barn Door Hanger

Receding Wardrobe and Receding Booth Hardware

Receding Wardrobe Door Hardware—Used on school buildings where individual compartment wardrobes are preferred. This

can be accomplished as shown in illustration. Each wardrobe has two doors, which slide back at right angles and stand parallel to side of wardrobe, allowing full interior to be used. Four channels are used on floor—two parallel to sides of wardrobe and two at 45° . Two tubular, self-cleaning tracks are used at 45° overhead, with two channels parallel to sides of wardrobe. Two ball bearing carriages, one in center of each door, with two pin plates, one at bottom center of each door, carry doors into position at sides of wardrobe.

Two pins on rear of each door, top and bottom, guide doors in side channels.

Receding Type of Booth Door Hardware—First manufactured by our Company for telephone booths. The door slides to the side and stands parallel to side of booth when open. Hardware for telephone booth is exactly one half the requirements shown for wardrobe doors opposite.

When ordering state exact width of each opening and width and thickness of each door.

Typical Installation Individual Compartment Wardrobe, Receding Type

For use in school buildings

Typical Installation of Receding Booth Hardware

Brackets

The following illustration shows the various forms of brackets used for hanging track to the structural member of door opening. Fittings in upper half of illustration are for Nos. 20 and 30 hangers, No. 2 track; the 6 fittings at bottom are for No. 60 hangers, No. 4 track; and the remaining fittings are for No. 3 track.

Brackets for Nos. 2, 3 and 4 Track

Guide Rollers

Reversible Guide—For doors 3 inches thick, steel angle reversible with adjustable guide wheel 2 inches in diameter. Weight, 1½ pounds.

Lag Screw Guide—¾-inch lag, 4½ inches long, 2-inch diameter wheel. Weight, ½ pound.

Floor Guide—Malleable floor plate, 3 inches square. Wheel

3 inches in diameter, overall height, 3½ inches. Weight, 1½ pounds.

Shoe Guide

For doors 1¾ to 2¼ inches thick, 3 inches wide, pressed steel angle, long side 4 inches, short side ¾ inches. Made up for special door thicknesses. Weight, 1 pound.

Shoe Guide

Tandem Trolley

Tandem Trolley

Originally designed for heavy engine house doors, but is used on any heavy door where flat bar track construction is desired. Wheels are 4 inches in diameter malleable cast—double ball bearing—machine turned grooves. They are connected by the Y-shaped malleable bracket which is bolted to the door.

Floor Guide and Weatherstrip

The No. 2 track inverted and anchored in the concrete by the No. 9 bracket forms the floor guide shown in this cut. It extends the full travel of the door. The weather strip which is made of heavy sheet steel, black enamel finish, guides between the lips of the track. This not only holds the door in alignment but makes the construction weatherproof.

Floor Guide and Weatherstrip

Weatherstrip and Floor Guide

Particularly desirable for parallel door construction. The angle sides form an anchor in the concrete and are held in position by separators. The clear spaces between separators allow water or dirt to drain off. When ordering state width and thickness of doors, and width of opening, or send rough sketch of door layout.

Single Door

Double Door

Strap Hangers for Flat Track

Constructed to run on a ¾-inch flat bar track, 3 inches wide. Wheels—malleable castings, 5 inches in diameter, double ball bearings—extra heavy steel strap apron 21 inches long. Finish in black enamel.

Flat Track Strap Hangers

Elevator Door Hangers

Track 6 feet, three brackets, two carriages No. 84 with 31-G plates for iron doors or No. 97 apron for metal covered doors.

When ordering give width of doors, thickness and direction of swing of door, and state if hollow metal or wood (metal covered).

Head room required for any of the above sets, 6 inches.

Hanger Equipped with
No. 31-G Plate

Hanger Equipped with
No. 97 Apron

No. 2 Hanger for Bolting Overhead to Angle Construction

Track No. 2, 6 feet
3 bolts

COMPLETE SET
2 carriages No. 84 with 31-G plate or 97 apron
Weight, 19 pounds

McCabe Bar Lock

Made in spring pattern of steel tube, finished black oxidized. Is simple in its construction and is made strong and durable, to insure long service. Standard length of bar 3 feet 6 inches.

No. 2 Hanger for Combination Swing and Slide Doors when Transom Swings Out

Track No. 2, 6 feet
3 brackets

COMPLETE SET
2 carriages No. 84, 97 apron
1 shoe guide
Weight, 25 pounds

No. 2 Hanger with Single Bar Swing Device Where Transom Bar Is Stationary

Track No. 2, 6 feet
3 brackets
2 carriages No. 89, 97 apron

COMPLETE SET
Single bar device
1 shoe guide
Weight, 30 pounds

Bar
Lock

No. 5 Elevator Door Hanger

The track is a self-cleaning type, simple in construction, having three working parts, namely: hanger track, carriage track and ball retainer. It is made of No. 10 gage cold rolled steel, has a smooth rolling surface for the bearings and is of sufficient thickness and strength to insure long and efficient service.

The bearings consist of $\frac{3}{4}$ -inch hardened steel balls. These balls are the largest size in any elevator door hangers. Balls are spaced 3-inch centers which gives 17 balls to a 3-foot door. The balls, as noted on full size cross section, having only four points of contact, reduce the friction to a minimum, and easy running and quiet operation is the result.

The length of the hanger track is equal to the full travel of the doors. The carriage track is equal to the width of the door less the distance required for track stops. The ball retainer is three-fourths of the full travel of the door. There is no cantilever action, as the weight is always traveling on the balls. This ball retainer also acts as a cleaner in the track.

These hangers are suitable for doors weighing up to 300 pounds. On doors of heavier weight we supply track of heavier gage steel and 1-inch balls.

Doors may be adjusted laterally or vertically without difficulty.

Detail of "McCabe No. 5" Elevator Door Hanger for Single Door

Elevator door hangers and tracks can be furnished for three arrangements of doors, namely: single door type; two-door type with doors sliding in opposite directions; and two-door type with doors sliding in the same direction.

How to Specify—Equip elevator doors with "McCabe No. 5" Elevator Door Hangers and "McCabe" Vertical Bar Locks.

McCabe "Blue Book"—This book on elevator door hangers sent on request.

No. 5 Hanger for Single Door

This arrangement is the most simple and is such that the door can slide in either direction. Angle brackets are furnished with all hangers as illustrated.

Cross Section of "McCabe No. 5" Elevator Door Hanger for Single Door

Scale, full size

Single Bar Swing Device

Used for sliding swinging doors in connection with No. 5 single hanger where transom bar is stationary.

Single Bar Swing

No. 5 Hanger with Two Doors Sliding in the Same Direction (Two-speed Type)

Two sets of tracks are required for this arrangement, each door sliding on a separate track. A pinion and two racks are so arranged that one door slides twice as fast as the other. Thus both doors reach the side jamb at the same time. Hangers are furnished with a 2x4-inch continuous angle for full travel of the doors, on which is mounted the rack and pinion operating device.

Garage Sliding Door Hangers

Typical Installation of McCabe Garage Sliding Door Hangers

The following page illustrates practical layouts of garage door openings which we feel will be a help to any one planning or designing garages.

Any number of doors can be used in these openings and our hangers can be applied to any weight of door.

For the average weight of door up to 200 pounds we use the No. 2 size of track, brackets and rollers.

The No. 3 size of track and hanger is furnished for heavier weight doors.

We manufacture sliding door hangers only—therefore locks, hinges or pulls are not included in our sets, but can be purchased from any hardware dealer.

When ordering state type, width of opening, number, size and thickness of doors.

Garage Sliding Door Hangers—(Continued)

Type G-1

Using No. 16 bracket provide header for bracket over top of door

Head room 5 inches from top of door to underside of header

300-pound doors and under, brackets 4 feet apart
500-pound doors, brackets 2 feet apart

Type G-2

OVERHEAD DOOR CORPORATION

MAIN OFFICE AND FACTORY
HARTFORD CITY, IND., U. S. A.

DISTRIBUTORS EVERYWHERE

CANADA: OVERHEAD DOOR COMPANY OF CANADA, LTD., 1951 Dundas Street, West, TORONTO, ONT.

The "Overhead Door"

The "OVERHEAD DOOR" for public, private and apartment house garages, factory, warehouse, greasing and filling stations, airplane hangars and similar buildings.

Made in any size or design to conform with any architectural trend. May be electrically operated if desired.

Stock Materials—Stiles and rails are made of the finest grade Sitka spruce, free from all knots and blemishes. Panels are made of three-ply fir veneer, manufactured with waterproof glue. All materials are thoroughly sanded and ready for paint or varnish. Doors can be made of clear cypress or white pine throughout, with solid raised panels, at extra cost. All rails and stiles are $1\frac{3}{4}$ " thick and veneer is $\frac{3}{8}$ " thick. All material is kiln dried.

"OVERHEAD DOOR" tracks and hardware are made of steel formed in our factory. All moving parts are ball-bearing. Safe working load of chain is many times the weight of the door. Springs are tested at 10% more stretch than required to operate the door.

Door Sections—Stiles and rails are mortised and tenoned together and are glued and doweled with steel dowels. Casein waterproof glue is used. Sections are joined together by means of special graduated hinges and the joints between the sections are rabbeted to make a shiplap joint. The rabbet is $\frac{3}{8}$ " deep on each rail and is sufficient to exclude all wind and rain.

Stock Doors—Stock Doors are made with 4" wide center stiles, $5\frac{3}{8}$ " end stiles, $2\frac{1}{8}$ " center rails, 4" top rails, 5" bottom rails. Each section is made with 5 center stiles and 6 three-ply fir panels $\frac{3}{8}$ " thick.

Doors made to size, in general are constructed as follows: Doors up to 10'2" wide are made with $3\frac{1}{2}$ " center stiles, $2\frac{1}{8}$ " center rails, $5\frac{3}{8}$ " end stiles, 5" top rails and 6" bottom rails. The bottom rails can be furnished extra wide if desired.

Doors from 10'3" to 16' wide are made with 5" wide center stiles, $2\frac{1}{8}$ " center rails, 6" end stiles, 6" top rails and 7" bottom rails. Doors over 16' wide are made with $6\frac{1}{2}$ " wide end stiles. The bottom rails can be furnished extra wide if desired.

Center stiles are arranged so that no glass or wood panel is over 16" or less than 10" in width.

Stock size doors are carried in stock by all "OVERHEAD DOOR" distributors and are available for immediate delivery. Stock size doors are: 8'x8', 8'x7'6", 8'x7'.

Number of Sections Required—

Doors up to 8'6"	4 sections
Doors from 8'6" to 10'6"	5 sections
Doors from 10'6" to 12'6"	6 sections
Doors from 12'6" to 14'6"	7 sections

Higher doors should be figured with intermediate sections not to exceed 23" in height. We reserve the right to specify changes, when better door operation will result.

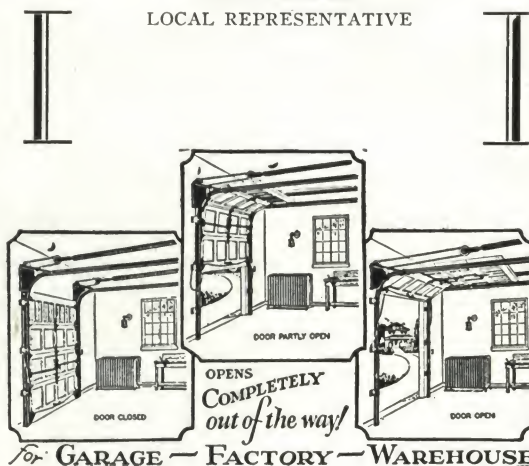

Glass Sections—Any or all sections may be arranged for glass. If mullions are required they are furnished $1\frac{3}{4}$ " wide.

Special Design Doors—Doors of special design will be built to conform to any architectural conception. The beauty and artistic features of a building may be incorporated in the garage doors. Our engineering department will gladly cooperate with architects in making their plans so they may utilize to the utmost the unique advantages of The "OVERHEAD DOOR."

Door Tracks—Doors up to 90 square feet, inclusive, have track 2" wide, mounted on jamb brackets. Jamb brackets are slotted for lag screws. Doors larger than 90 square feet have 2" track mounted on $2\frac{1}{2}$ "x $2\frac{1}{2}$ "x $\frac{1}{8}$ " reinforcing angle. Doors approximately 144 square feet or over, or doors of less area made heavier than regular, use 3" heavy gauge track. This is listed as heavy hardware track, the vertical tracks being either mounted by means of heavy gauge brackets or 3"x5" full length angle. 2" track is rolled with a 10" or 15" radius, while 3" track is rolled with a 20" radius.

Door Struts—Doors 12' wide or over require our steel struts to make the door rigid. Doors of special construction less than 12' wide may require struts.

LOCAL REPRESENTATIVE

Locking Device—A Yale cylinder lock in combination with a positive locking device, securely locks, bolts and bars the door, across its entire width, with a quarter turn of the handle. The door may be locked or unlocked from either side. Doors may be keyed alike, separately or master keyed.

Everything But Glass—All necessary hardware to make an installation is furnished with each door. This includes all bolts and screws. No glass is furnished unless specified.

Head Room—Head Room is indicated on all Jamb Details. "Head Room" is a term applied to the space required for installation and operation of "OVERHEAD DOORS." The term indicates the clear space (full door and track width) vertically above the top of the opening to the nearest point of obstruction, such as rafters, ceiling, beams or roof. For Head Room one must consider obstructing pipes, beams, etc., that may interfere with the operation of the door. Head Room considers the clear space for springs and their fastenings. For convenience "Head Room" has been given for a flat, unobstructed ceiling and also for a "Hip Roof," indicating a slanting roof, of all types, it being considered that the Hip Roof has the pitch up and away from the opening.

Jamb and Pier Construction—2"x6" facing secured to the wall with bolts, and made flush with the sides of the opening provides an ideal foundation for the hanging of any size "OVERHEAD DOOR." These facings should extend at least 15" above the header and be fastened securely near the top. Angle mounted track may be installed directly on steel jambs by drilling and tapping the jambs, and fastening the track securely with flat-head machine (Cap) screws. Where two or more doors are to be installed with a center pier, see Jamb Details for minimum clearances.

We recommend mounting "OVERHEAD DOORS" on steel jambs or wood casings, although it is not impossible to erect directly on brick or concrete.

Stock doors, or smaller, may be installed in a frame garage on jambs made of 2x4's with their inside edges flush. This is regular construction for a frame garage and requires nothing special.

Open Position of Doors—In a normal installation the underside of the door in an opened position will be 9" higher than the header height. Horizontal tracks slant upward 1" in 4' so that there will be more than 9" clearance above the header line at the back ends of the horizontal tracks.

Electric Control—"OVERHEAD DOORS" may be operated electrically with The "OVERHEAD DOOR" Control. Control stations may be located at any desired point giving instant control of the door. Private garage doors may be operated from the driveway, house or any convenient location.

Accessories

Attention is called to the many devices used with "OVERHEAD DOORS" to assist in their installation and operation, namely, girder and auxiliary track; chain hoist; chain hoist electric control; automatic fire-station equipment; full vertical doors, weight operated; metal clad doors; doors with more than normal vertical travel; doors of special construction for greasing stations; and accessories such as rubber rollers, built-in pass doors, etc., are listed.

Service

The "Overhead Door" sales-service organization is international in scope. There is an Overhead Door Company in your community, our direct representative, composed of skilled door engineers who will welcome the opportunity to confer with you regarding The "Overhead Door." Each individual company maintains trained installation specialists for your convenience.

Specifications

In specifying "OVERHEAD DOORS," designate them as The "OVERHEAD DOOR," manufactured by OVERHEAD DOOR CORPORATION, Hartford City, Indiana, U. S. A.

The "Overhead Door" Control (motor size always in the proper relation to door size) assures perfect and positive electric operation for The "Overhead Door"

OUTSTANDING FEATURES OF THE "OVERHEAD DOOR"

Below:

The tracks inclined rearwardly from jambs is accomplished by varying lengths of jamb brackets. Observe simplicity of installation. Note attachment of chain to bottom of door which eliminates strain on hinges and sections

At left:

A very slight upward lift and the door pulls away from the jambs, eliminating binding and friction as the door moves upward and open—completely out of the way

Above:

Inside view of positive locking device which securely bolts both sides of the door through the tracks. Lock rod guides at each side of door are adjustable

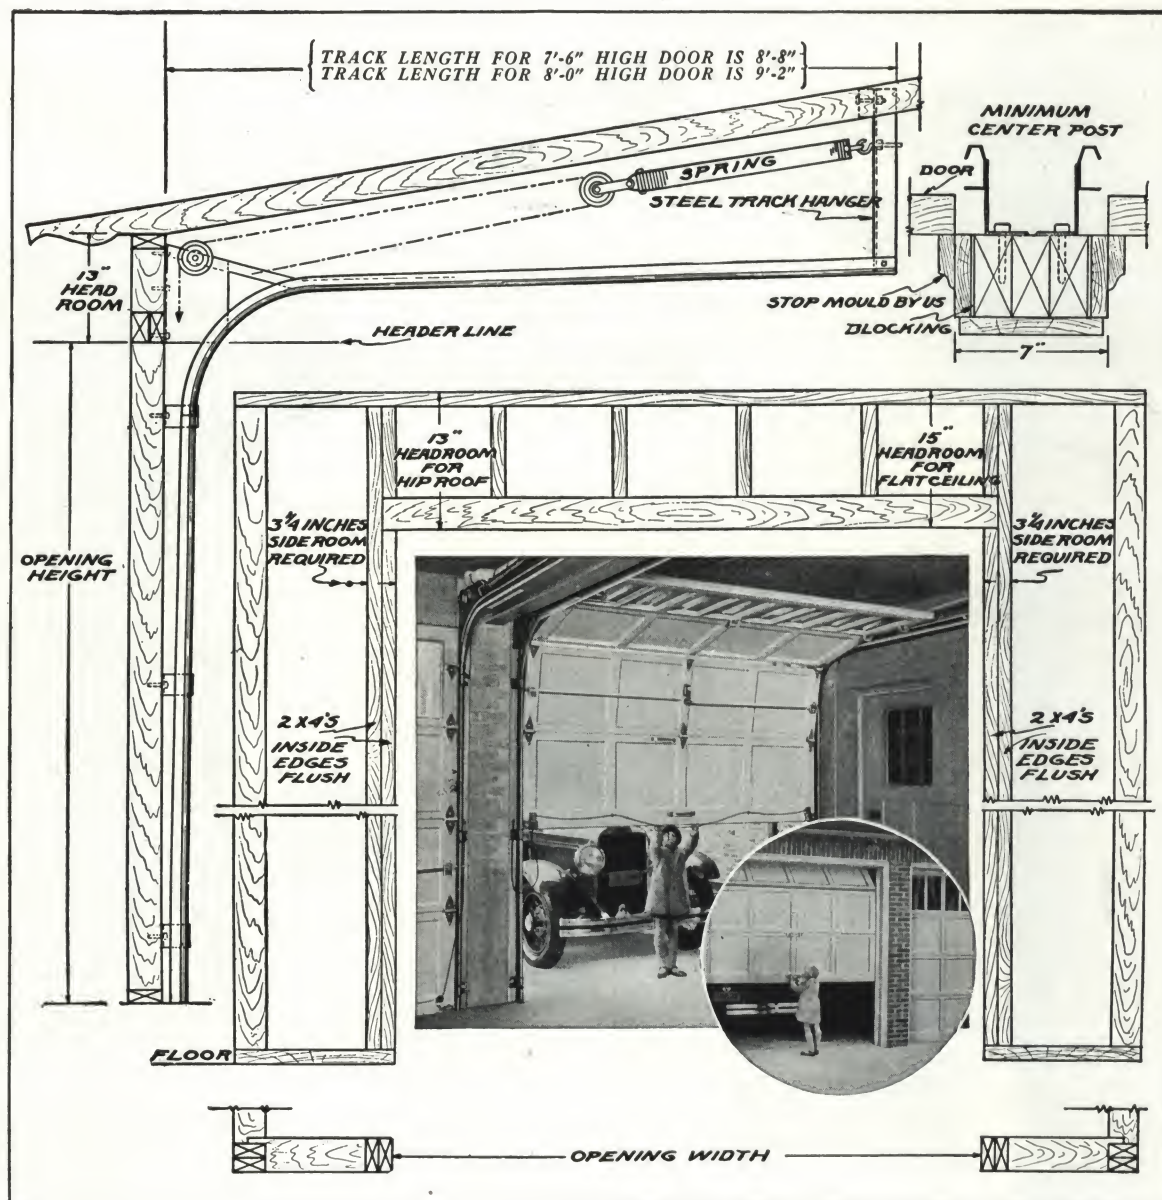

At left:

Exterior view of lock assembly. Use of key is necessary only when unlocking door from outside. The door is locked automatically by a quarter turn of either the outside or inside lock handle

The "Overhead Door" Control (motor size always in the proper relation to door size) assures perfect and positive electric operation for The "Overhead Door"

OUTSTANDING FEATURES OF THE "OVERHEAD DOOR"

Practical jamb construction for all "OVERHEAD DOORS" not exceeding 8 ft. wide or 8 ft. high.

Stock size doors are 8 ft. wide by 8 ft. high, 8 ft. wide by 7 ft. 6 in. high, and 8 ft. wide by 7 ft. high.

Tracks for all "OVERHEAD DOORS" to be installed on steel jambs are mounted on angle iron because a drill and tap method of installation is necessary.

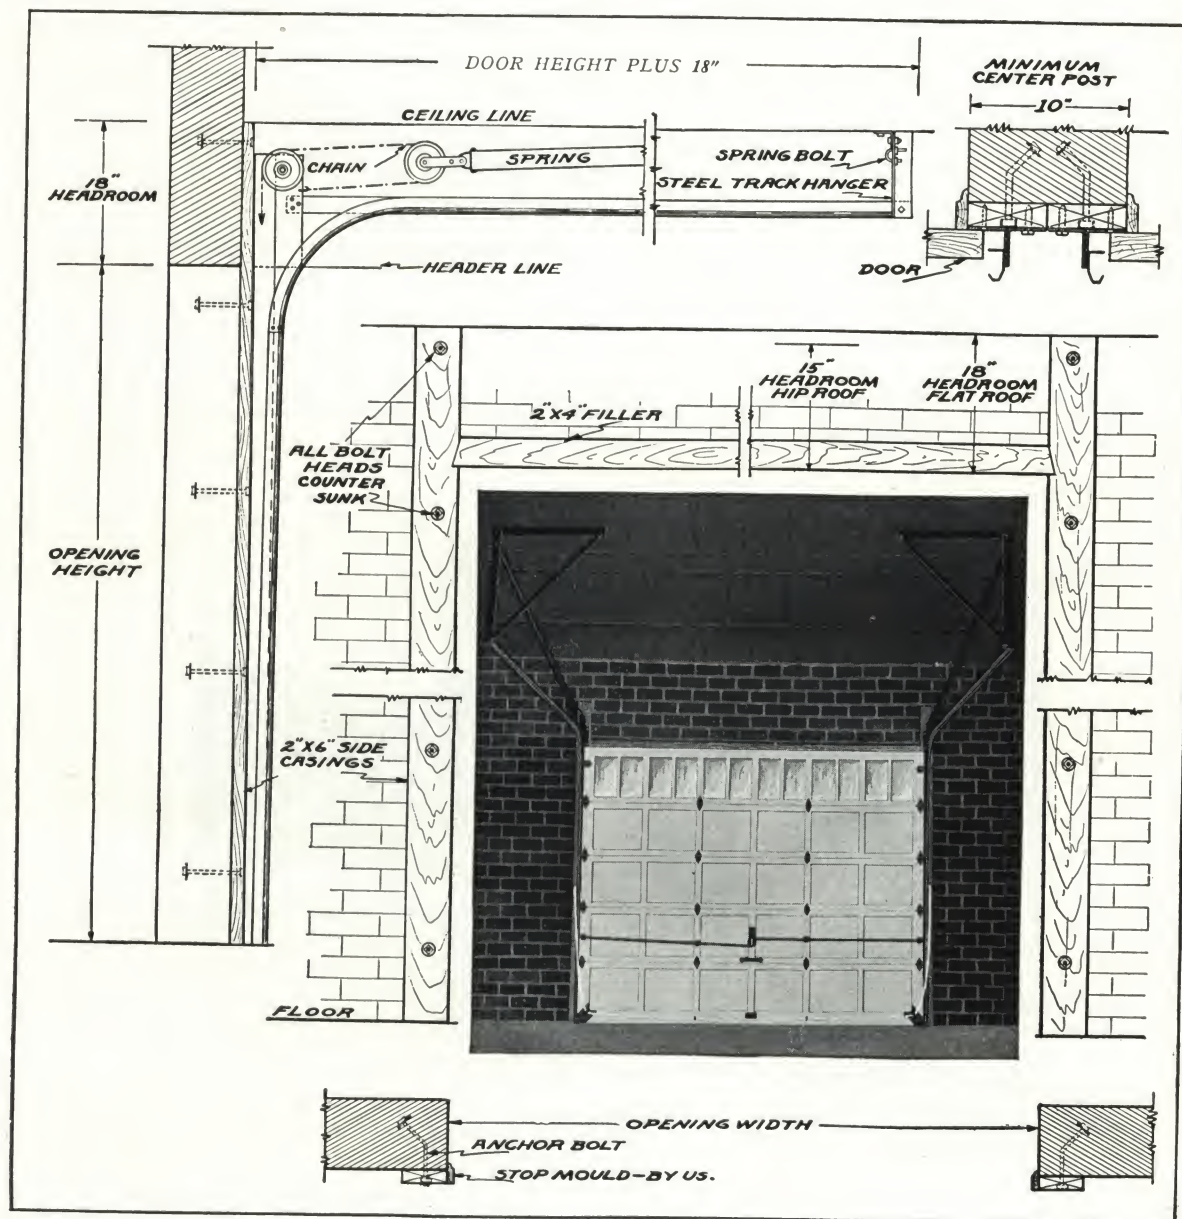

Doors 64 sq. ft. and less in area, to be installed on steel jambs have the vertical tracks mounted on $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{1}{8}$ -in. angle. Horizontal tracks do not require reinforcement.

Should an inside wood (casing) jamb construction be desired follow Jamb Detail No. 3. Should the use of 2x4-in. instead of 2x6-in. casings as in Jamb Detail No. 3 be desired, the minimum clearances as specified in Jamb Detail No. 1, may be followed

The "Overhead Door" Control (motor size always in the proper relation to door size) assures perfect and positive electric operation for The "Overhead Door"

DETAIL
NO. 1

WOOD JAMB DETAIL FOR THE "OVERHEAD DOOR"

Practical jamb construction for "OVERHEAD DOORS" measuring in area up to (approximately) 144 sq. ft. and which are to be installed on wood (casing) jambs.

Vertical and horizontal tracks for doors 90 to 144 sq. ft. (approximately) in area are mounted on $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{1}{8}$ -in. angle iron.

Doors 65 to 90 sq. ft. in area have the vertical tracks assembled with double jamb brackets and the horizontal tracks mounted on $1\frac{1}{4} \times 1\frac{1}{4} \times \frac{1}{8}$ -in. angle iron.

If a door measuring less than 65 sq. ft. in area is desired for installation on inside wood (casing) jambs, clearances as

specified in Jamb Detail No. 1 may be followed, and 2x4-in. inside wood (casing) jambs may be used if desired.

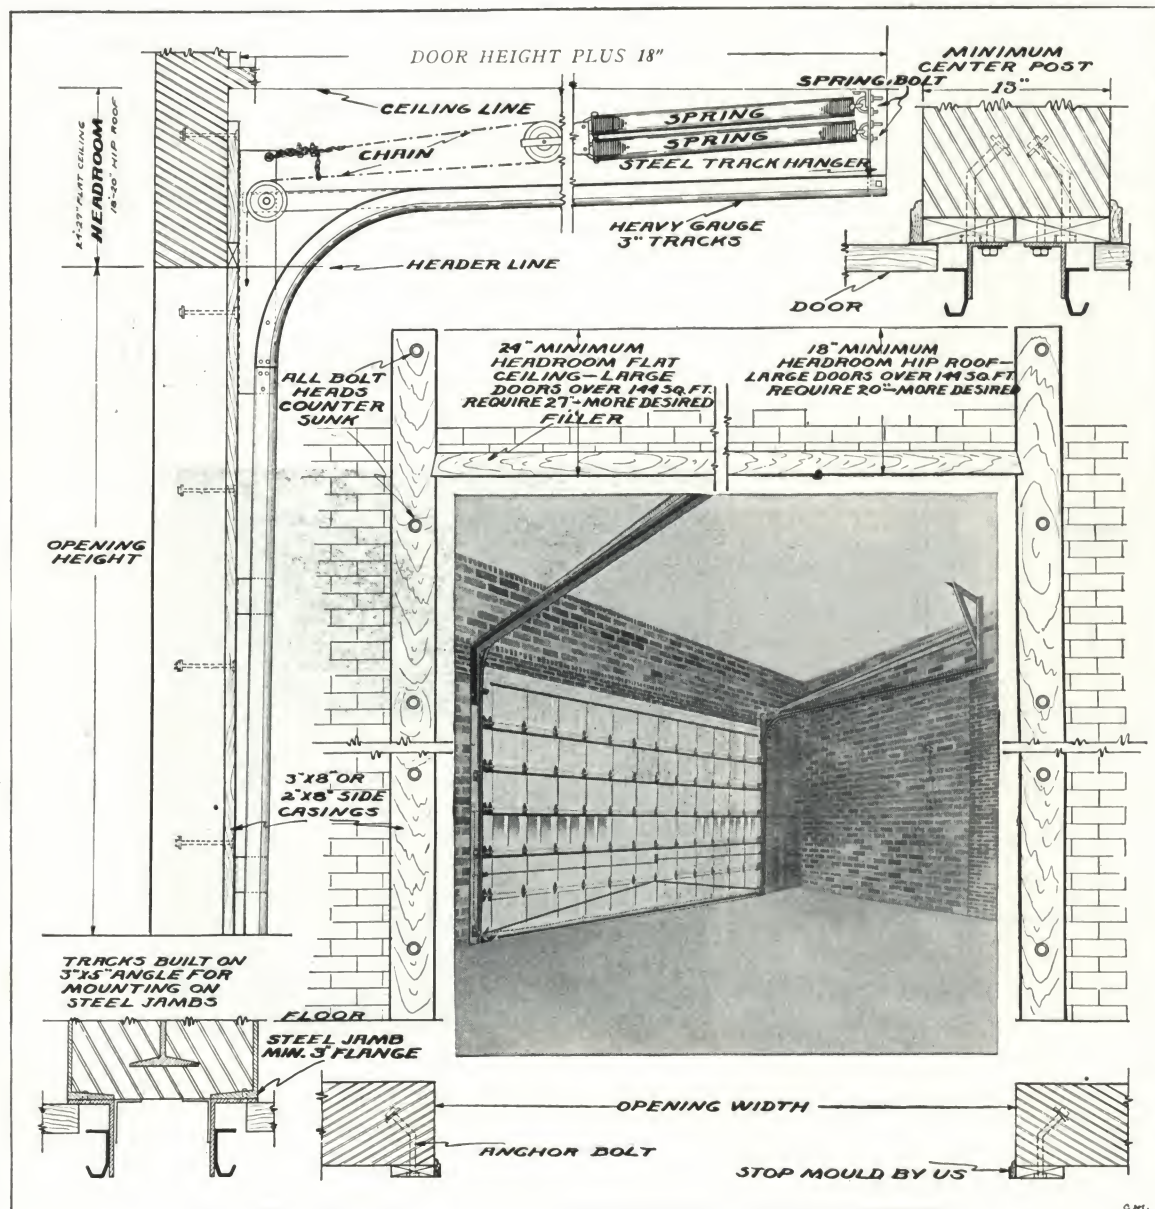

Tracks for all "OVERHEAD DOORS" to be installed on steel jambs are mounted on angle iron because a drill and tap method of installation is necessary.

Vertical and horizontal tracks for doors 64 to 144 sq. ft. (approximately) in area to be installed on steel jambs are mounted on $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{1}{8}$ -in. angle iron. Doors 65 to 90 sq. ft. in area have the vertical tracks mounted on $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{1}{8}$ -in. angle iron and the horizontal tracks mounted on either $1\frac{1}{4} \times 1\frac{1}{4} \times \frac{1}{8}$ -in. angle iron or on $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{1}{8}$ -in. angle iron.

The "Overhead Door" Control (motor size always in the proper relation to door size) assures perfect and positive electric operation for The "Overhead Door"

DETAIL
NO. 3

INSIDE WOOD (Casing) JAMB DETAIL FOR THE "OVERHEAD DOOR"

Jamb detail requirements for the installation of "OVERHEAD DOORS" measuring (approximately) 144 sq. ft. or more, in area.

Special heavy gauge track and hardware are standard equipment for use on doors of this classification, which are to be installed on either wood or steel jambs.

Doors 144 sq. ft. (approximately) and over in area, to be erected on wood (casing) jambs, have vertical tracks equipped

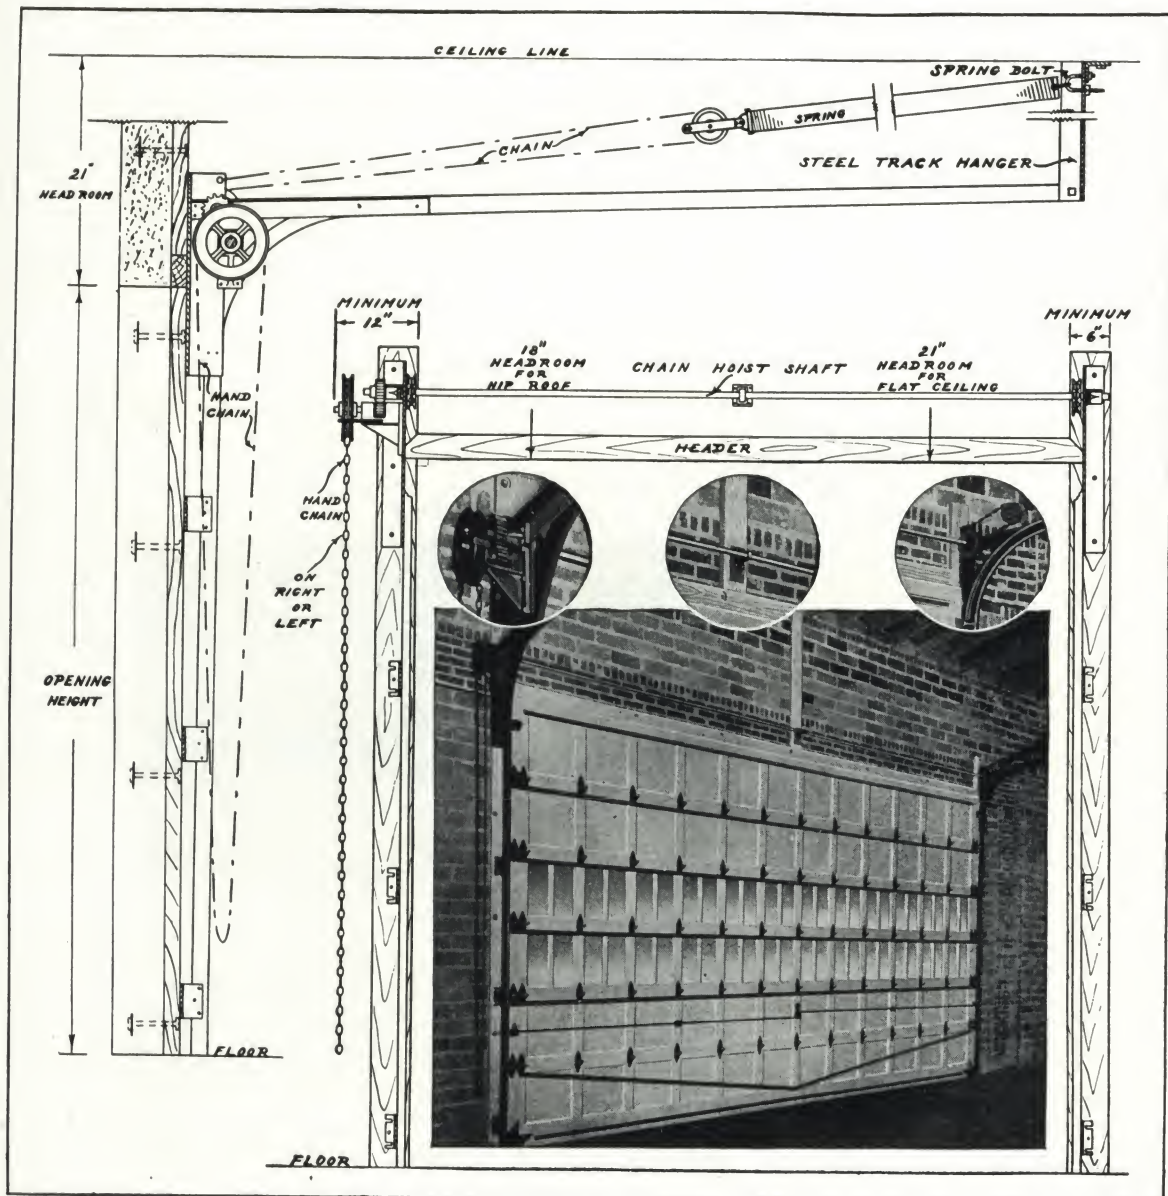

with heavy gauge jamb brackets and have the horizontal tracks mounted on $2\frac{1}{2} \times 2\frac{1}{2}$ -in. angle iron. Doors exceedingly wide or high (approximately 165 sq. ft. and greater) have vertical tracks mounted on 3×5 -in. angle iron.

For installation on steel jambs, vertical tracks of all doors 144 sq. ft. (approximately) in area and greater, are mounted on 3×5 -in. angle iron and horizontal tracks are mounted on $2\frac{1}{2} \times 2\frac{1}{2}$ -in. angle iron.

The "Overhead Door" Control (motor size always in the proper relation to door size) assures perfect and positive electric operation for The "Overhead Door"

DETAIL
NO. 4

HEAVY HARDWARE JAMB DETAIL FOR THE "OVERHEAD DOOR"

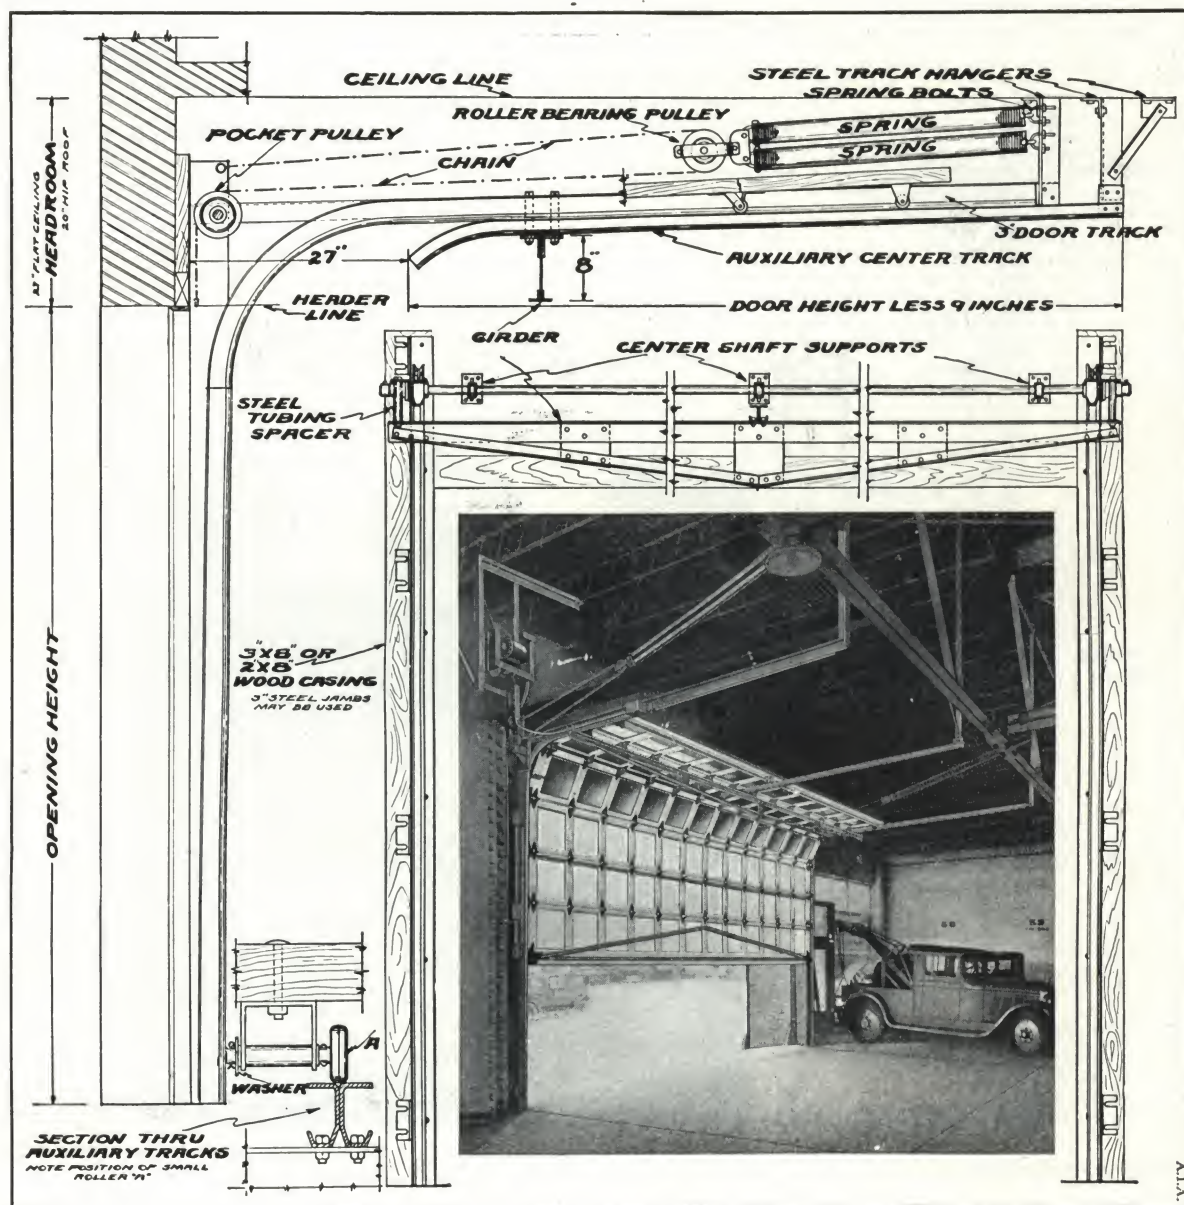

The chain hoist has been specially designed for large "OVERHEAD DOORS." The chain hoist is primarily manufactured for use on doors equipped with heavy hardware but may be used on doors equipped with $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{1}{8}$ -in. angle iron

mounted tracks. The chain hoist operates The "OVERHEAD DOOR" rapidly and does not restrict hand operation from the outside. Hoist is available for operation of door from either side (right or left)

The "Overhead Door" Control (motor size always in the proper relation to door size) assures perfect and positive electric operation for The "Overhead Door"

DETAIL NO. 114-B
(See Jamb Detail No. 4)

CHAIN HOIST DETAIL

On all doors 18 ft. wide or wider, the girder and auxiliary track is recommended. The auxiliary or center track forms an ideal support for very wide doors when in the open or horizontal position. Doors less than 18 ft. wide, of special construction heavier than our regular stock, require the girder and auxiliary

track. Doors approximately 16 ft. wide and wider come under this classification. The chain hoist, hand or control operated, may be used as desired. (Above illustration is of a door 21 ft. x 12 ft. equipped with motor controlled chain hoist.)

The "Overhead Door" Control (motor size always in the proper relation to door size) assures perfect and positive electric operation for The "Overhead Door"

Experience and Facilities

The RICHARDS-WILCOX MANUFACTURING Co. have been continuously in business over 49 years, since the founding of the company in 1880. They are pioneer specialists in door hangers and similar hardware specialties. The factory at Aurora, Ill., covers 260,000 sq. ft. The average yearly output is 10,000 tons of finished products.

Engineering Service

A corps of experienced engineers and draftsmen are maintained at the plant to assist in the designing and detailing of equipment particularly adapted to unusual or special conditions. The services of this department are obtainable, without obligation, through the local representative whenever required.

Responsibility

Our rating in R. G. Dun's and Bradstreet's is over \$1,000,000.00—first grade of credit.

Distribution and Service

R-W equipment is distributed through the better retail hardware dealers throughout the country. In the larger distributing centers branch offices are maintained in charge of an experienced R-W representative always accessible to the architect for prompt assistance and service.

Contract and Erection Department

To assure the maximum satisfaction and permanent ease of operation for folding partitions adapted to wide or high openings the RICHARDS-WILCOX MANUFACTURING Co. have recently added this new department to their service facilities. Since the main difficulty with this type of equipment has arisen largely from the use of ordinary mill made doors prone to warp and twist after erection, the R-W Co. now furnish veneered wood folding partition doors of the highest quality of construction and finish, fully equipped with the proper hardware and completely erected in the opening under the supervision of experienced erection mechanics.

R-W "SLIDETITE" GARAGE DOOR EQUIPMENT

No. 1035 Equipment

Operation

"Slidetite" equipment consists of complete sets of hardware for the operation of from 3 to 10 doors closing in line in one opening. The doors are so hinged together and suspended at intervals on hangers running in overhead tracks that the doors open or close with a *sliding-folding*, accordion movement and at all times occupy the minimum space requirements.

When open, the doors are carried to one or both sides of the opening compactly folded together and swung clear of the jamb line opening, standing either at an angle to the front wall or, where space is sufficient, folded parallel with the front wall.

Although in-folding is recommended, "Slidetite" equipment is equally adapted to doors opening out.

Adaptability

Use for both private and public garages.

Features

The outstanding feature of "Slidetite" is that the particular method of operation causes the doors to close *absolutely tight* together and against the rabbet at head, jamb and sill. They are extremely easy to operate. Locking devices, operated from the outside, provide convenient access without the necessity of a separate garage entrance door. Up to 30 ft. in width no intermediate posts or mullions are required.

Doorway and Door Sizes—Door Weights

"Slidetite" equipment is adaptable to clear openings from 8 ft. wide to a maximum of 30 ft. wide equipped with from 3 to 10 doors.

Individual doors (all of the same width) should not exceed 3 ft. wide nor 250 lb. in weight.

Heights may vary up to a maximum of 12 ft., so long as the weight limitations are not exceeded (higher doors require other hardware).

Hardware Furnished

Each "Slidetite" set consists of the requisite quantity of track, hangers, hinges, floor guides, tie rods, handles and door locking devices (together with all bolts and screws for attachment) necessary to operate the number of doors for which the set is intended. Complete erection details are furnished with each set of equipment. The hardware furnished is as follows:

(A) **Track and Brackets**—Rolled steel tracks Nos. 31, 232 and 32 are used dependent on weight of door to be carried. Tracks are supported on steel brackets of type and number required to fit the particular track assembly. The maximum length of track section is 10 ft.—where the track length required is greater than 10 ft., two lengths are connected in perfect, rigid alignment with the R-W Lock Joint Bracket. Finish: tracks, black japan; brackets, black japan.

(B) **Tracks and Hangers**—No. 435, four (4) wheel, roller bearing: wheels, steel ($2\frac{1}{8}$ -in. dia. for track No. 31 and 3-in. dia. for tracks No. 232 and No. 33); drop forged steel frame and hardened bearings, adjustment, lateral and vertical; apron for track No. 31 is $7\frac{1}{8}$ in. high and 2 in. wide, and for tracks No. 232 and No. 33 $7\frac{1}{8}$ in. high and $2\frac{1}{2}$ in. wide. Finish, black japan.

(C) **Hinges**—All hinges are wrought steel, black enamel finish.

(C1) No. 435 surface hinge. Sizes: $2\frac{1}{2} \times 4$ in.; $3\frac{1}{2} \times 5$ in.; 4×7 in.; 12×4 in.

Note: Used inside and outside where no space between doors is required for cremone bolts or special locking devices. The correct size is furnished with each set.

(C2) No. 836 offset surface hinge. Sizes same as listed for No. 435. Hinge knuckle is offset $1\frac{1}{2}$ in. making a 3-in. space between doors when folded, otherwise hinge is similar to No. 435.

Note: Used for out-opening only whenever space between folded doors is required for cremone bolts or where special cremone bolt locking device is installed. The correct size is furnished with each set.

(C3) No. 1035 heavy offset hinge with surface pintle. Sizes: $18 \times 2\frac{1}{2}$ in.; $24 \times 2\frac{1}{2}$ in.; $20 \times 2\frac{1}{2}$ in.; $36 \times 2\frac{1}{2}$ in.

Note: Used at jambs where two or more doors are folded clear of jamb line. The correct size is furnished with each set.

(D) **Handles**—No. 81, gray iron, $6\frac{1}{2}$ in. over all, black enamel finish.

(E) **Cylinder Lock and Latch**—No. 6.0 rim cylinder lock and thumb lift latch and handle one (1) cylinder for locking door from outside only—two (2) cylinders for locking door from both sides. Face of cylinders made of solid polished bronze—lock case handle and thumb lift finished in black japan.

Note: Furnished when specified on free swinging door. See plan types, R-W page 3.

(F) **Cremone Bolts**—All cremone bolts are finished in black enamel.

(F1) No. 517 cremone bolt with lugged, adjustable bottom keeper is standard with No. 1035 "Slidetite" equipment. Locks both top and bottom with one movement of lever handle. Made in one size adjustable up to 9 ft. high (extra 18-in. sections furnished for higher doors).

(F2) No. 517x427 cremone bolt is No. 517 plus a high grade cylinder lock with offset locking attachment and an outside operating handle.

Note: Furnished when specified on plan types No. 4 $\frac{1}{2}$ and No. 8 $\frac{1}{2}$ (see R-W page 3) where outside access is desired.

(F3) No. 617 cremone bolt made in three principal sections—the center or lever handle locking section and top and bottom adjustable bolt sections—the three sections united by $\frac{1}{2}$ -in. connecting rods. Made in one size adjustable up to 10 ft. high (extra 18-in. sections furnished for higher doors).

Note: Furnished when specified in lieu of No. 517 bolt which is standard with No. 1035 equipment.

(F4) No. 617x427 cremone bolt is No. 617 plus a high grade cylinder lock with offset locking attachment and an outside operating handle.

Note: Device is similar to that illustrated for No. 517x427 bolt and is used under similar conditions when No. 617 cremone bolt is used elsewhere on No. 1035 equipment.

(G) **Tie Rods**—No. 435, $\frac{3}{8}$ -in. dia. with adjustable tension. Designed to fit No. 1035 hinge pintle pin.

Note: Furnished on all jamb doors where three (3) or more doors are hinged together.

(H) **Bumper Shoes and Floor Guides**—No. 435-72 black enameled, steel bumper shoes (for one or two doors as required). No. 273 adjustable floor center (or near center) door guide; made of black enameled steel and gray iron; adjustable for doors from $1\frac{3}{4}$ in. to 3 in. thick.

(I) **Door Holder**—No. 119 special black enameled spring metal.

Note: Furnished on all free doors located at end of multiple hinged units.

(J) **Mechanical Operators**—Where required in public garages, fire stations, etc., "Slidetite" doors can be equipped with R-W No. 1200 or No. 1300 Automatic Electric Door Operator. Complete information on request.

No. 1135 Equipment General

In operation the No. 1135 "Slidetite" equipment is similar to the No. 1035 equipment. It is particularly adapted to the highest type of private garage installations.

The track and hanger units are similar to the "Ideal" elevator door equipment and operate with exceptional smoothness and ease. Except for (1) the "Ideal" track and hangers and (2) the cremone bolts, the equipment is the same as described for the standard No. 1035 sets.

Tracks and Hangers

The door hangs from a wide rider-bar, rolling over hardened steel balls, which in turn, roll along a carefully milled steel track groove.

Friction is practically eliminated and at the same time the rider-bar travels at twice the speed of the balls. A ball retainer keeps the steel balls accurately spaced at all times.

Cremone Bolts

The No. 617 (and 617x427, when specified) cremone bolts are standard with the No. 1135 equipment.

No. 1135 Ideal "Slidetite" Track and Hanger

TABLE FOR NO. 1035 "SLIDETITE" STANDARD EQUIPMENT SETS

Catalogue No.	Number of doors	Maximum weight each door, lb.	Minimum head-room "R," in.	"S" Minimum, in.	
				Doors opening at 90°	Opening parallel with wall

1035-B6 -232	6	175	11¼	Thickness of 3 doors + 2¾	1½
1035-B6 -33	6	250	11½	Thickness of 3 doors + 2¾	1½
1035-B7 -31	7	100	9	Thickness of 4 doors + 3¼	1½
1035-B7 -232	7	175	11	Thickness of 4 doors + 3¼	1½
1035-B7 -33	7	250	11½	Thickness of 4 doors + 3¼	1½
1035-B8 -31	8	100	9	Thickness of 5 doors + 6¼	1½
1035-B8 -232	8	175	11	Thickness of 5 doors + 6¼	1½
1035-B8 -33	8	250	11½	Thickness of 5 doors + 6¼	1½
1035-B8½-31	8	100	9	Thickness of 4 doors + 3¼	1½
1035-B8½-232	8	175	11	Thickness of 4 doors + 3¼	1½
1035-B8½-33	8	250	11½	Thickness of 4 doors + 3¼	1½
1035-B9 -31	9	100	9	Thickness of 5 doors + 6¼	1½
1035-B9 -232	9	175	11	Thickness of 5 doors + 6¼	1½
1035-B9 -33	9	250	11½	Thickness of 5 doors + 6¼	1½
1035-B10 -31	10	100	9	Thickness of 5 doors + 6¼	1½
1035-B10 -232	10	175	11	Thickness of 5 doors + 6¼	1½
1035-B10 -33	10	250	11½	Thickness of 5 doors + 6¼	1½

Note: All dimensions for out-opening sets are the same as above except the dimension "S" where the plus figures for sets O1035-B3 and B4½ is 4½ in., for sets O1035-B4, B5 and B6 is 5¼ in., for sets O1035-B7 and B8½ is 8¼ in., for sets O1035-B8, B9 and B10 is 9 in.

How to Use the Table

(A) **System of Numbering**—The number in the left hand column designates the complete "open in" hardware set adapted to the number and weight of doors to be operated, and the plan type (the number of doors opening from the split to the right and left hand). In the table the numeral 1035 indicates the set type; the numeral B3 etc. indicates, B—No. 517 standard cremone bolts and 3 etc.—the plan type; the numerals 31, 232 and 33 indicate the track used for various door weights (see R-W page 2).

(B) **Open-out Sets**—To designate sets for out-opening doors, prefix the letter "O" to the first numeral, thus O1035.

(C) **To Substitute No. 617 Cremone Bolts**—Omit the letter "B" in the second numeral and specify the No. 617 bolt in the optional hardware (see suggested specification below).

(D) **To Specify No. 1135 "Ideal" Equipment**—Substitute the number 1135 for 1035 in the first numeral and omit the letter "B" in the second numeral and the track number, thus No. 1135-3, etc.

Specification

Furnish and install in accordance with the manufacturer's erection details, Richards-Wilcox "Slidetite" Garage Door Equipment as follows:

Doors (number or otherwise locate): No. "Slidetite" for opening wide, high; door thickness

Note: If there is more than one opening and the equipment varies, list each door separately.

Note: Select the equipment number from the table above. Insert dimensions required—measurements should be from finished jamb to jamb and from finished floor to finished jamb.

In addition to, or in lieu of, the standard hardware designated by the set number include the following optional hardware if desired.

Note: Select from list under heading "Hardware Furnished" R-W page 2.

- (a) No. 650 rim cylinder lock and latch (one (1) or two cylinders) for free swinging door.
 (b) No. 517x427 cremone bolt locking device.
 (c) No. 617 cremone bolts.
 (d) No. 617x427 cremone bolt locking device.

PLAN TYPES

NOTE: Grouping of doors may be reversed to swing from either jamb from split.
 NOTE: Door "A" is a free swinging door.

R-W No. 235 "SLIDASIDE" GARAGE DOOR EQUIPMENT

Operation

Where maximum use of the floor area is desired and front wall space is limited, "Slidaside" R-W No. 235 is the ideal equipment. When open, "Slidaside" doors stand at right angles to the door opening along the inside wall or walls of the building. Only a small amount of floor space is required to swing the door open.

Note: The doorway clearance diagrams on this page indicate the amount of clearance required for various sized doors. Each square in the diagram represents one foot. The full lines mark the line of travel of doors on straight tracks, the dotted lines, doors on curved tracks.

Adaptability

"Slidaside" hardware is adaptable to various doorway conditions and arrangements (1) Single doors with space between the jamb and the side wall. Double doors with space between jambs and side wall. (2) Single and double doors with jambs adjacent to the side walls. (3) Pair of doors hinged together for opening with space between the jamb and the side wall. (4) Three doors hinged together and sliding to one side. (5) Six doors, three of which are hinged together sliding to the right, three of which are hinged together sliding to the left.

Hardware Furnished

Each "Slidaside" set consists of the requisite quantity of tracks, brackets, hangers, floor guides, end stops, hinges, handles, door holders, stay rollers, locks and bolts (together with all bolts and screws for attachment) necessary to operate the number of doors for which the set is intended. Complete erection details are furnished with each set of equipment. Plans of each set of "Slidaside" doors are found on page 6. The hardware furnished is illustrated on page 7 and is as follows:

(A) **Tracks and Brackets**—Rolled steel tracks Nos. 31, 232 and 33 are used with steel brackets required to fit the par-

ticular type of assembly for the various sets. Finish, black japan.

(B) **Trucks and Hangers**—No. 235 to fit sizes of track and weights of doors including two and four wheel truck types with long and short pendants as required. Dropped forge steel frame and hardened bearings. Roller or ball bearing as best adapted to the particular set. Adjustment lateral and vertical. Wheels $2\frac{1}{8}$ -in. diameter for track 31, 3-in. diameter for tracks 232 and 33. Finish, black japan.

(C) **Center Floor Guide**—No. 271 with bumper shoes No. 435-72 for the BB, DD, FF, HH, KK double door set. Finish, black enamel.

(D) **Floor End Stop**—No. 272 with bumper shoes 435-72 for use with all single door sets. Finish, black enamel.

(E) **Hinges**—All hinges used on all multiple door sets in this series are No. 635 wrought steel surface hinges, 12 gauge. Finish, black enamel.

(F) Handles—

(a) Flush Drop Handles for all except the JJ and KK sets. Finish, black enamel.

(b) Bow Handles No. 81 are supplied with all sets in the 235 series. Finish, black enamel.

(G) **Door Holders**—No. 119 supplied with the JJ and KK sets. Finish, black japan.

(H) **Stay Roller**—For JJ and KK sets are No. 55 finished in black japan.

(I) Locks and Bolts—

Note: Locking devices for various "Slidaside" sets are given on page 7.

(a) **Cane Bottom Bolts** of heavy steel No. 524. Finish, black enamel.

(b) **Parallel Door Bolt and Lock** No. 516, made of malleable iron and steel. Finish, black enamel.

(c) **Door Lock** No. 825, half mortise type, steel and malleable iron. Finish, rustless dead black.

(d) **Door Lock** No. 525.

(e) **Door Bolt and gravity latch** No. 835. Bolt of malleable iron, other parts of steel. Finish, black enamel.

side." (See page 6 for plans.) The first number after the letters indicates the locking device. On all the sets listed above, the number is 1, indicating inside locking only for all except the 3 and 6-door sets. In the latter it indicates outside locking only. Optional methods and devices for locking, however, are given below. The second, or second and third numbers, 8, 9, or 10, designate the width of opening. The last two or three numbers, 31, 232, or 33 represent the track size.

Locking Devices

In choosing sets from the above table, the following combinations of locking devices are available for the sets indicated:

The following combinations are available for one door or two doors hinged together sliding to one side with space between jamb and sidewall (AA, EE and GG sets): To lock from inside only, one 524 cane bottom bolt or one No. 516 door bolt. For locking from outside only, one No. 524 cane bottom bolt.

For single door sets with opening adjacent to the side wall (CC sets): To lock from inside only, No. 524 cane bottom bolt or No. 516 door bolt. For locking from outside only, one No. 825 door lock.

For pairs of single doors, or pairs of double doors hinged together sliding to both sides with space between jamb and sidewall (BB, FF and HH sets): To lock doors from inside only, two No. 524 cane bottom bolts or two No. 516 door bolts. To lock doors from inside and outside, one No. 524 cane bottom bolt or one No. 516 door bolt and one No. 525 door lock.

For two single doors sliding to either side with opening adjacent to sidewall (DD sets): To lock doors from inside only, two No. 524 cane bottom bolts or two No. 516 door bolts. To lock doors from inside and outside, one No. 524 cane bottom bolt or one No. 516 door bolt and one No. 825 door lock.

For three doors hinged together sliding to one side (JJ sets): To lock doors from outside only, one No. 835 locking bolt or one No. 525 door lock.

For six doors, three hinged together sliding to one side, three hinged together sliding to the other side (KK sets): To lock all doors from outside only, two No. 835 locking bolts or two No. 525 door locks. To bolt three doors from inside and three doors from outside, one No. 516 door bolt and one No. 835 locking bolt or one No. 525 door lock.

To Specify

Furnish and install in accordance with the manufacturer's erection details, Richards-Wilcox No. 235 "Slidaside" garage door equipment as follows:

(Select catalogue number for door weights, size and number of doors, from table) for doors weighing lb., total opening width, height, door thickness (Attach sketch of floor plan with dimensions.)

Note: Select from the above list of optional locking methods and devices for each type of equipment, the locks and bolts to be furnished.

Note: If there is more than one opening and the equipment varies, list each door separately.

How to Use the Table

The first number, 235, designates the "Slidaside" series. The capital letters, AA, BB, etc., indicate the type of "Slida-

R-W "IDEAL-SLIDING" GARAGE DOOR EQUIPMENT

Description

"Ideal-Sliding" Garage Door Equipment is high class hardware in which "Ideal" ball bearing track and hanger assemblies support sliding doors. The "Ideal" track and hanger assembly embodies, because of scientific construction, perfect operation. The door hangs from a wide rider-bar, rolling over steel balls, which in turn roll over a carefully milled track groove. Friction is practically eliminated and at the same time the door travels at twice the speed of the bearings. A ball retainer always keeps the steel balls properly spaced.

Operation

From the suggested hardware sets given below, equipment for single sliding and double sliding doors can be selected to suit various doorway conditions.

(A) Single doors sliding on single track to one side of doorway. (See Plan A below.)

(B) Pair of doors sliding in opposite directions on single track. (See Plan B.)

(C) Two parallel doors sliding on two tracks to wall space on one side of opening. (See Plan C.)

(D) Two parallel doors sliding from jamb to jamb on two tracks. (See Plan D.)

(E) Parallel doors on two tracks with front wall space in center of doorway. (See Plan E.)

(F) Parallel doors on two tracks sliding to wall spaces on both sides of doorway.

(G) Parallel doors sliding from jamb to jamb in two tracks, one inside and one outside. (See Plan G.)

Illustration Shows a Two-Car Garage. Doorway Is Equipped with "Ideal-Sliding" Parallel Doors

Hardware Furnished

With the exception of the track and hanger assemblies which are of the "Ideal" type, all other hardware in the "Ideal-Sliding" sets is the same as described and illustrated in the section on "Parallel Sliding Garage Door Equipment" page 5.

Weatherstripping—Sets 457 and 454 are furnished with tracks having no weatherstripping. 456 hardware is supplied with tracks equipped with weatherstrips.

Weights of Doors

This equipment is made for doors weighing up to 500 lb.

Headroom

Distance between top of door and top of track brackets for plans using double track is 11 in. The headroom on plans using single track is 7 in.

To Specify

Furnish and install in accordance with the manufacturer's erection details, Richards-Wilcox "Ideal-Sliding" Garage Door Hardware as follows:

(Select catalogue number for size opening and plan of tracks) for doors weighing lb. total opening, width, height, door thickness

Note: If there is more than one opening and the equipment varies, list each door separately.

PLANS OF TRACK

R-W STRAIGHT SLIDING GARAGE DOOR EQUIPMENT

Description

This equipment consists of all the necessary hardware to operate a single door or a pair of doors suspended from hangers sliding on one overhead track.

Door Sizes and Weights

This equipment is for doors weighing from 300 to 800 lb. Door thicknesses range from $1\frac{3}{4}$ to $3\frac{1}{2}$ in.

Hardware Furnished

The equipment is shown in detail in the descriptive drawings for both the single and double sliding doors. The hard-

Note: Above catalogue numbers are for single sets. In specifying double door sets, substitute the figure 2 for the first figure in the catalogue number which is given as 1 above for single sets.

ware is illustrated on page 11 in the section on Parallel Sliding Door Equipment. As shown in the table of sets, roller bearing or ball bearing hangers may be chosen.

Locking Devices

Specify No. 525 locks for these doors. Single doors require a jamb strip equal to the thickness of the doors to attach lock strike.

To Specify

Furnish and install according to the manufacturer's erection details, Richards-Wilcox Straight Sliding Garage Door Equipment as follows:

(Select catalogue number for door weights, door thickness, roller or ball bearing hangers and whether single or double doors.) For doors weighing lb. Total opening, width, height, door thickness

Note: If there is more than one opening and the equipment varies, list each door separately.

R-W HEAVY INDUSTRIAL SLIDING DOOR EQUIPMENT

Description

This equipment consists of all the necessary hardware to operate heavy doors on single or multiple runs of parallel track. It is designed for heavy doors weighing from 800 to 3000 lb. and up to $4\frac{1}{2}$ in. thick.

Operation

This equipment will operate over any width of opening. One, two or three runs of track may be used. Weights and thickness of doors are given in the table herewith.

HEAVY INDUSTRIAL DOOR EQUIPMENT

Hanger No.	Track	For doors weighing, lb.	Thickness of doors, in.	Distance, top of door to bottom of track

	145	3000	$3\frac{1}{2}$ to $4\frac{1}{4}$	$5\frac{1}{2}$	$6\frac{1}{2}$

Hardware Furnished

Hardware, as shown in the drawing above for garage door equipment, is supplied for these industrial doors in correspondingly heavier sizes.

Hangers—Hangers are specifically designed for heavy duty. All are of ball bearing construction and will operate easily and smoothly the weight doors indicated for each type.

Tracks and Brackets—No. 233 Track is 10 gauge, lock joint, $4\frac{1}{4}$ in. high, $2\frac{5}{8}$ in. wide, inside measurement.

No. 375 Track is 10 gauge, $3\frac{1}{4}$ in. high, $2\frac{5}{8}$ in. wide, inside measurement.

No. 145 Track is 11 gauge with $\frac{1}{4}$ -in. angle iron tread, 3 in. wide, $4\frac{3}{4}$ in. high, inside measurement.

No. 533 Track is No. 9 gauge, $4\frac{1}{2}$ in. high, $2\frac{1}{8}$ in. wide, inside measurement.

Bracket attachments may be for overhead or wall attachment. Track is furnished in 4, 6, 8 and 10 ft. lengths. Brackets should be spaced on 24-in. centers.

To Specify

Furnish and install according to manufacturer's erection details, Richards-Wilcox Heavy Industrial Door Equipment as follows:

Hanger No. (select according to corresponding weights and thicknesses of doors, two hangers to each) for use with runs of track (if multiple track, to be assembled by manufacturer with necessary brackets) for doors weighing lb. Total opening ft. wide, ft. high. Door thickness in.

Note: If there is more than one opening and the equipment varies, list each door separately.

Note: State whether overhead or wall attachment.

R-W No. 1300 AUT-O-DOR ELECTRIC DOOR OPERATOR

Description

In bringing out the No. 1300 Aut-O-Dor Operator, we have kept pace with modern times by developing an Electric Door Operator that is neat in appearance and compact in design. We have eliminated the long levers and connecting arms that have so detracted from the general appearance of the door operators in the past.

We believe the No. 1300 Aut-O-Dor Operator to be the neatest door operating mechanism on the market today and when installed on the doors, it does not detract from the artistic design of the building.

Installation

Heretofore, the problem of installation has been a very vexing one. In the No. 1300 Aut-O-Dor Operator we have again complied with the popular demand, by developing a door operator so simple in design that it can readily be installed in an hour's time by any handy man, exclusive of the electric wiring.

The No. 1300 Door Operator is set in place in much the same manner as a liquid door check. It is only necessary to put three bolts through the top rail of the door and two lag screws or cap screws into the door jamb to install each unit, one unit being used on each side of the opening. In other words, there are only 10 bolts and screws to attach to make a complete installation.

Control

It is not necessary to run electric conduit to the rear of the building in order to operate an Aut-O-Dor, throughout the length of the garage. By means of an especially designed switch mounting, the doors may be operated by a small overhead cable, which is regularly furnished. As many cords may be dropped from the cable as desired. Cords are usually hung the full length of the driveway, and floor men find it more convenient to operate the doors from the pull cords than from wall switches. If desired, standard three and four-way switches can be secured from any electrician and used for operating the doors instead of the pull cords.

Inasmuch as no special switches are required to operate

No. 1300 Aut-O-Dor Unit Designed for Either Plain Swinging or Sliding-folding Doors

this controller, they are not furnished regularly. Any electrician can install as many sets of push button switches in the office and other places as necessary.

Safety Features

In order to guard against accidents, we have designed our No. 1300 Operator so as to take care of every emergency.

Should the electric current be off, the doors may be operated by hand from the inside by merely pulling the release cord. The introduction of this feature means that at no time are your customers locked in or out.

In case the doors are hit when in motion the crank arm is propelled through a friction clutch which allows slippage so that no damage is done to the mechanism. By pushing any operating button a second time the doors may be stopped in the middle of either cycle of operation.

As the doors are opened and closed by means of a crank, they start opening very gradually, the action becoming more rapid in the middle of the operation and stopping in a slow, easy manner without any sudden jerk or pull on the doors. This keeps the doors in good shape and will not break the glass by slamming.

Another great feature derived from the crank movement is that power increases toward the end of the operation. This makes it possible to completely close the doors against a heavy wind without any strain whatsoever on the mechanism.

When the doors are closed they are locked and cannot be blown open by a wind.

Time Switch for Fire Station Use

The Richards-Wilcox No. 1300 Aut-O-Dor Electric Door Operator has met with universal approval among the architects, as well as with Fire Department officials, for controlling large entrance doors in fire stations operated by a time switch.

In Fire Departments, it is important that when an alarm is turned in that the equipment leave the building in the shortest time possible and that the doors be controlled with the least amount of effort. By a slight pull on a cord hanging conveniently over the driver's seat, the doors are opened, and after the equipment has left the building the doors are automatically closed after a predetermined lapse of time. The time switch has a motor as a time element and is easily adjusted.

The doors may be opened and closed electrically independently of the time switch without the necessity of disconnecting the time element.

Should the occasion demand, there are extra contacts provided so that the lights, sirens, and other equipment may be controlled automatically without any extra duties being required of the firemen. Should there be an interruption in electric current after the time switch has started its cycle of operation, the doors will remain open and the time switch will continue its cycle of operation upon resumption of the electric current.

Time Switch

No. 1300 Aut-O-Dor in Fire Station

R-W FOLDING PARTITION DOORS AND HARDWARE

Description

Doors—In R-W folding partitions, the doors are of the well known Key Veneered construction manufactured by the Compound and Pyrono Door Company exclusively for the RICHARDS-WILCOX MANUFACTURING CO. If an absolutely sound-proof partition is desired, special doors will be made to meet the requirements.

Hardware—The hardware is of the well known Richards-Wilcox quality which has been in use for many years with satisfaction. It is made in a number of styles and finishes.

R-W No. 535—Doors are hinged together in pairs by invisible hinges and each pair of doors operated as an independent unit. Designed for large heavy doors, the weight of the doors is carried on the floor track, the upper track serving only to guide the top of the doors. (See page 12.)

R-W No. 237—The doors are hinged together in pairs the same as in No. 535 but the weight of the doors is carried by hangers running in a trolley track above the opening. Weights of doors are limited according to the capacity of the overhead track used. The floor track in this case merely acts as a guide for the doors. (See page 14.) This equipment is not recommended for doors over 12 ft. high.

Doors

Description—Extra heavy sawed veneers are used on stiles and rails. They are keyed to the laminated cores as well as glued to it. This tongue and groove construction forms a tenacious bond besides affording twice the gluing surface possible in flat veneers. The result is a veneer construction of exceptional sturdiness that will last for decades.

Types—These doors are furnished in flush type and in ten standard types of panel arrangement for use with R-W partition door hardware. (See illustrations.)

To Specify Doors—Furnish and install where shown on the plans, Richards-Wilcox partition doors for R-W (here name the hardware selected) Folding Partition Door Hardware as follows:

Note: Use matter below for flush type.

All doors so shown shall be made with stiles, rails, and flush panels.

Stiles and rails shall have cores built up of strips of soft-wood not over $\frac{3}{8}$ in. thick, with $\frac{3}{4}$ -in. edge strips of the same wood as face veneers. All stile and rail veneers shall be sawed $\frac{1}{4}$ in. thick to finish $\frac{1}{8}$ in., and shall be tongued and grooved to the core with at least four tongues and four grooves to the inch, and glued with best grade of glue. Tongues and grooves to be cut not less than $\frac{1}{8}$ in. deep. All stile and rail joints to be mortised and tenoned.

Panels shall be made with built-up cores and sawed face veneers and cross banding over the staved core. They shall be the full thickness of the door and shall finish flush with the stile and rail surfaces, with joints well made and glued.

All doors shall be hand or belt smoothed and entirely free from cross-grain sander scratches.

Showing Key Veneered Flush Door Type

No. 535 Doors

No. 237 Doors

The design and thickness of the doors to be as detailed on the plans.

Note: Use matter below for panel type.

The doors shall have stile and rail cores built up of strips of soft-wood not thicker than $\frac{3}{8}$ in.; glued together under pressure, with $\frac{3}{4}$ -in. edge strips of same wood as face veneer. All stile and rail veneers shall be sawed $\frac{1}{4}$ in. thick to finish $\frac{1}{8}$ in. thick and shall be tongued and grooved to the core with at least four tongues and four grooves to the inch, and glued with best grade of glue. Tongues and grooves shall be cut not less than $\frac{1}{8}$ in. deep.

All panels shall be laminated five-ply with grain crossed on alternate plies. All stile and rail joints to be mortise and tenon construction. All doors to be hand or belt smoothed and entirely free from cross grain sander scratches on plane surfaces and from knife marks on mouldings and moulded edges.

The design and thickness of the doors to be as detailed on the plans.

R-W No. 535 FOLDING PARTITION DOOR HARDWARE

Description

Doors are hinged together in pairs by invisible hinges. Each pair of doors operated as an independent unit. Designed for large heavy doors, the weight of the doors is carried on the floor track, the upper track serving only to guide the top of doors. The plans on the next page suggest different door arrangements.

Width of Opening—The width of the opening is immaterial as the method of operation allows for any number of doors to be used. An odd number of doors may be used if desired by pivoting the door nearest the jamb and operating it as a single unit.

Door Height and Thickness

Maximum heights of doors recommended for various thicknesses: 1¾ in. thick, 12 ft. high; 2 in. thick, 14 ft. high; 2¼ in. thick, 15 ft. high; 2½ in. thick, 18 ft. high; 2¾ in. thick, 20 ft. high, and 3 in. thick, 24 ft. high. Thicker doors than those recommended above, for the various heights, can be used but the maximum thickness of doors for which No. 535 hardware is made is 3 in.

Passage Doors

When the partition doors are small, one door in the opening can be used as a passage door from room to room when the partitions are closed. There should then be an odd number of doors in the opening, the passage door being the odd door. It is not recommended for doors over 9 ft. high.

We recommend that the third door from the jamb be made the passage door. This door would then be hinged to the second door of the first pair of doors. It will be necessary to shorten the top door stop on one side of the doors so the end will be far enough from the jamb toward which the doors fold to clear the passage door and permit it to swing.

Wicket Doors

When doors are large, we recommend the use of wicket doors which can be placed in any of the doors except the pivot door. Wicket door threshold with table of minimum width of door stile is shown on page 13.

Spring Plates

When all the doors open to one side between jambs, spring plates for compensating jamb strips are furnished. This strip allows for slight variation in width of doors due to shrinking or swelling. It will always keep the doors pressed tightly together when they are closed. We are also prepared to furnish details for compensating strip (patent pending) at center of opening when doors divide at the center.

Hardware Furnished

No. 535 hardware is furnished in several different classes as follows:

Class A—

The Top Pivots, Bottom Pivots (except base plate, bottom stops, top stops, top guides are made of steel, polished and brass plated, brush brass finish. All bottom rollers, top guides, flush bolts, flush pulls, top stop lugs are solid brass, polished, brush brass finish. Tracks, jamb springs, guide track knees and base plate of bottom pivot are steel, dead black finish. Furnished with invisible hinges.

Class C—

The Top Pivots, Bottom Pivots, top stops, top guides are made of steel, dead black finish. All bottom rollers, top guides, flush bolts, flush pulls, top stop lugs, are malleable iron, dead black finish. Tracks, jamb springs, guide track knees are steel, dead black finish. Furnished with butt hinges.

Class D—

Same as Class C except has Invisible Hinges instead of butts.

Class E—

Same as Class A except has Surface Hinges with Back Plates instead of invisible hinges.

Class F—

Same as Class C except has Surface Hinges with Back Plates instead of butt hinges.

To Specify

Furnish and install according to the manufacturer's erection details, Richards-Wilcox No. 535 Folding Partition Doors as follows:

Types of No. 535 Doors

By Manufacturer—Doors shall be hinged together in pairs with invisible hinges and shall be mounted on double ball bearing flange type rollers running on cold rolled steel track set flush with the floor. Top of doors shall be guided and steadied laterally by ball bearing top guides running in wood-lined metal track. The doors shall be fitted with safety devices which will only permit of their being folded when in the correct position to engage with interlocking plates attached to floor and head jamb.

By Others—The partitions shall be furnished and installed complete by the manufacturer excepting rough bucks at jambs and at head which shall be furnished and installed by the general or carpenter contractor. The contractor shall provide sufficient supports for the floor track which shall be approved by the architect and the partition manufacturer. The trim consisting of soffits, finished jambs, casings and all other exposed members shall (shall not) be furnished by the partition manufacturer, but shall be installed by him. All paint and finishing shall be done by others.

The above partitions are to be guaranteed against defective material or workmanship for a period of five years.

To Specify Doors

See specifications for Key Veneered doors on page 11.

P-24 Top Track
P-25 Guide Track Knee

P-78 Bottom Track for Concrete Floor

P-18 Bottom Track for Wood Floor

P-20 Bottom Track for Wood Floor

P-79 Bottom Track for Concrete Floor

**Bottom Roller with
Side Plate Removed**

Plan A

A 5-door opening showing the odd door hinged to the second door on the right. This method of providing passage door is suitable for small doors only, not over 9 ft. high. Notice spring jamb at the left.

Plan B

See how the doors disappear into a Wall Pocket. Swing door can be completely shut when the Partition Doors are fully opened or closed.

Plan C

Showing how doors stand behind a projection of the wall. As the first door on the right end must slide to get into the door space behind projecting wall, rollers are substituted for the pivots otherwise used on this door. Spring jacks are not necessary.

Plan D

Doors divide at the center. Half slide to the right, half to the left.

Suggested Plans of Doors

R-W No. 535 FOLDING PARTITION DOOR HARDWARE

R-W No. 237 FOLDING PARTITION DOOR HARDWARE

Description

No. 237 doors are hinged together in pairs moving independently as in the case of No. 535 hardware but the weight of the doors is carried by hangers running in a trolley track above the opening. Weights of doors are limited according to the capacity of the overhead track used which is not recommended for doors over 12 ft. high. A floor track and guide is provided to guide the bottom of the doors. Where it is desired to close the doors into a pocket or have them stand behind a projection of the partition wall, each pair of doors may be fitted with hangers at both ends. The plans on the next page give a graphic idea of the various methods of installation to which No. 237 hardware is adaptable.

Width of Opening

The width of opening, as in the case of No. 535 doors, is unlimited due to the method of operation.

Size of Doors

Thickness and weight of doors for each type of track are given in the table below. Doors approximately 3 ft. wide are recommended.

Passage Doors

The same recommendations made with regard to Passage Doors in connection with No. 535 hardware hold true with No. 237 hardware.

Wicket Doors

As in No. 535, wicket doors are recommended when partition doors are large. They can be placed in any one of the partition doors except the pivot door. The minimum width of the door stile beyond the edge of the wicket door should be: 5½ in. for doors 1¾ in. thick or 6 in. for thicker doors.

Spring Plates

Spring plates for compensating jamb strips to allow for swelling and shrinking of doors are provided similar to that described in No. 535 hardware.

Hardware Furnished

No. 237 hardware is illustrated in detail below with drawing showing application on doors.

Track and Hangers—Four sizes of overhead track are

LIST OF PARTS

P-6 No. 535 Flush Pull, Malleable iron, black finish, for doors 1¾ in. or more in thickness.
 P-6 No. 535 Flush Pull, Solid brass, brushed finish, for doors 1¾ in. or more in thickness.
 P-14 No. 135 Butt Hinges.
 P-21 Wicket Door Threshold, less latch.
 P-30 No. 237-0 Top Pivot. (Used with 237-0 and 237-10 Hangers).
 P-30 No. 237-2 Top Pivot. (Used with 237-2 and 237-12 Hangers).
 P-30 No. 237-3 Top Pivot. (Used with 237-2 or -4 and 237-13 or -14 Hangers).
 P-31 No. 535 End Jamb Spring.
 P-32 No. 3 Style Split Brackets.

furnished for various weights of doors as shown in the table. Two or four wheel hangers according to location, both illustrated below, may be chosen to fit each size of track. The hangers may be ball bearing or roller bearing.

Floor Guide and Floor Track—Both are illustrated below. The steel track, when set on top of the floor as in the case of 739-3 it forms a raised threshold with bevelled strip on either side. 739-2 is set into the floor flush. Nos. 739-2 and 739-3 are regularly furnished for doors 1¾ in. thick and track No. 30½. 739-5 should be put in place before the floor is laid so that it will be flush with the floor.

Bolts and Hinges—One and one-half pairs of hinges and one flush pull are required for every two doors. One No. 237 surface bolt is required for each opening when all doors fold one way, two required for each opening when doors divide at center.

Finish—Hardware is supplied with exposed parts in three finishes as desired: Solid brass, plated and black.

To Specify

Furnish and install according to the manufacturer's erection details, Richards-Wilcox No. 237 Folding Partition Door Hardware as follows:

(Select track number from table according to the weight and thickness of doors to be installed). Width of opening Number of Doors Height of Doors Width of Doors Thickness of Doors (Two wheel hangers), (Four wheel hangers) with (Ball Bearing), (Roller Bearing) Rollers, Type of Floor Guide (Select number from illustration) Finish of exposed parts (Solid brass), (plated), (black).

Note: A floor plan of type of operation of doors should accompany specifications.

To Specify Doors

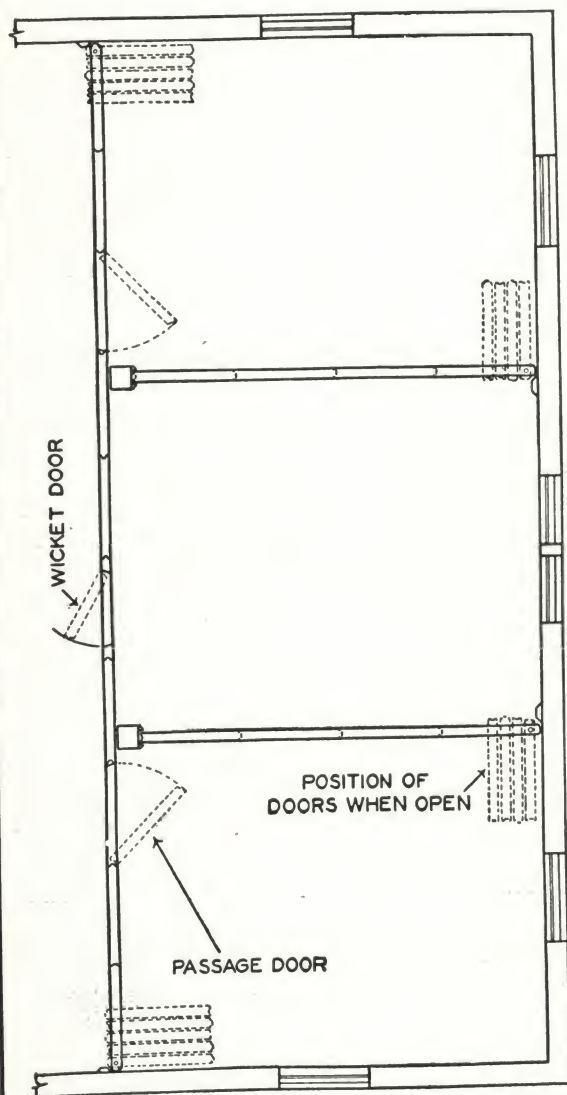

See page 11 for specification of Key Veneered Doors.

Note: Top of rail of door should not be less than 5 in. wide.

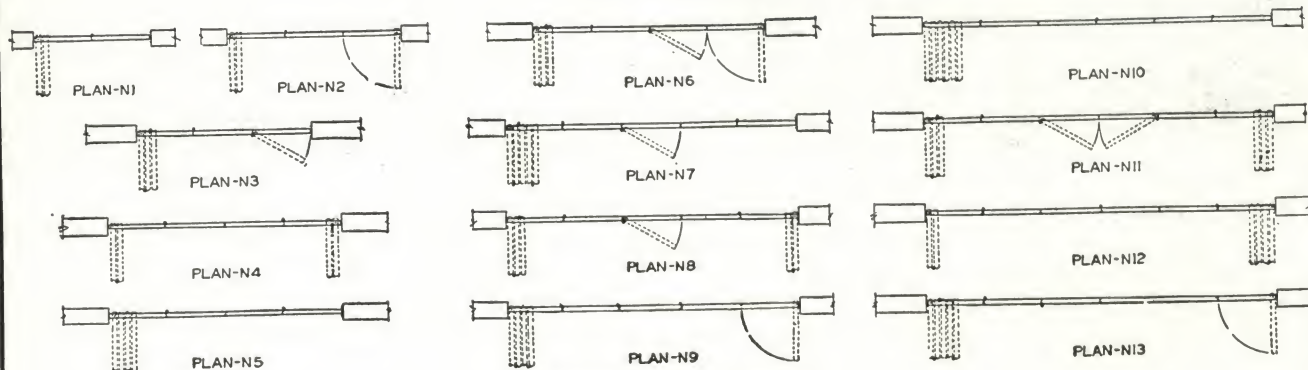

NO. 237 HARDWARE

Sets for Track No.	Thickness of doors, in.	Maximum weight of doors, lb.	Weight of hardware per door, lb.
30 ½	1 ¾	80	13
75	1 ¾ to 2	110	17
33	2 to 2 ¾	225	30
232	1 ¾ to 2 ½	150	25

Schematic Plan Showing Partitions of Different Widths

Suggested Door Plans

R-W No. 237 FOLDING PARTITION DOOR HARDWARE

R-W SLIDING ACCORDION PARTITION DOOR HARDWARE

Adapted to

Use in Sunday school rooms, Y. M. C. A.'s, industrial schools, lodges, hotel dining rooms, sample rooms, etc.

Operation

All the doors may be folded to one side or divided at center with half the doors folding to either side. When opened the doors fold compactly against the wall. No pocket required.

Half Doors—A half door is required adjoining the jamb toward which the doors fold. When doors divide and fold toward both sides, two half doors are necessary.

Width of Doors

No door should exceed 3 ft. in width. The exact width of the doors is determined by four conditions. First, the distance from the center of the hinge pin to the edge of the door. Second, by the thickness of the doors. Third, by the number of doors and fourth, by the style of hanger used.

To determine width of full size doors (when all doors fold to one side) add dimension "B" (from table below), to clear width of opening and divide this sum by the number of full size doors plus one half.

Example—Clear width of opening—12 ft. 1 in.; thickness of doors—2 in.; number of full size doors—4; "B" for loose pin butts (from table)—1¼ in.; 12 ft. 1 in. + 1¼ = 146¼ in.; 146¼ ÷ 4½ = 32½ in., width of full size doors.

Width of Half Doors—Width of half door—one-half width of full size door, less "B" from table. In the above example, 32½ ÷ 2 = 16¼ in. = one-half width of full size door. 16¼ — "B" = 16¼ — 1¼ = 15 in., width of half door.

Divided Doors—When doors divide in center proceed as above except base calculations on one-half the width of opening, dividing by one-half the number of doors.

Door Thickness

Doors of any standard thickness may be used, depending on their size and other special conditions.

Tongue and Groove Styles

This type of door is recommended because it will make a much tighter partition.

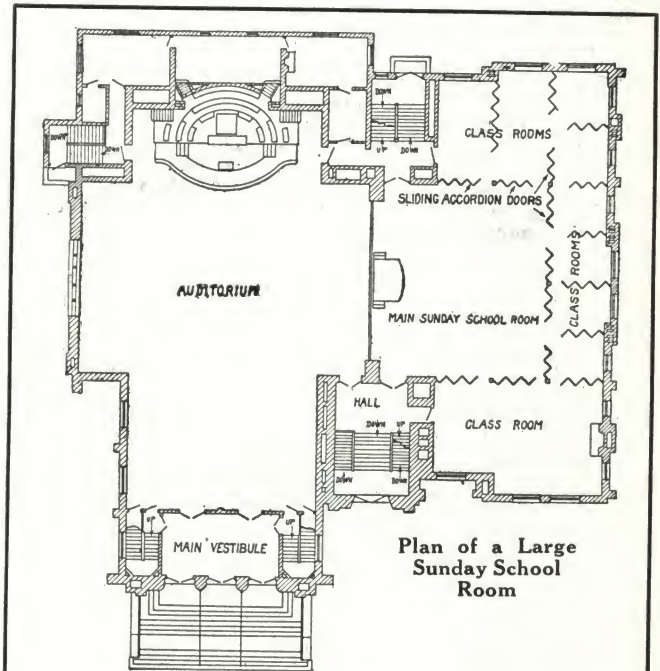

Butt Hinges

Use 1½ pairs of hinges to each hinge joint. As may be seen from the table below, the use of tight pin butts enables the hinge pin in some cases to be set very close to the edge of the doors because it is not necessary to make allowance for removal of hinge pins.

Butts in the sizes listed are considered suitable for ordinary wood doors of the given thickness, but for extra high doors or doors of material considerably increasing weight a larger size door hanger should be used. This necessitates the use of larger butts as shown in the table in the line corresponding to the hanger.

Sliding Accordion Doors

137-0	1⅝	3 x 3	1/4	1/4	15/16	15/16	1/2	1/2	3 1/8	1 1/8	1 3/8	3 1/4
137-2	2	4 x 4	1/4	1/4	1 1/4	1 1/4	1/2	1/2	3 7/8	1 1/8	1 3/8	3 1/4
137-2	2 1/4	4 x 4	1/4	1/4	1 5/8	1 5/8	1/2	1/2	3 7/8	1 1/8	1 3/8	3 1/4

Surface Hinges

Flat surface hinges may be used if desired so long as the size door hanger listed for given thicknesses of doors is followed and the hinges are of such dimensions that the space between the doors when folded is not less than that given in the table below for tight pin butts. Surface hinges are impractical unless offset for types of doors larger than those given. The dimension "B" for calculating width of door will then be one-half the thickness of the door plus one-half the space between the doors when folded.

Service Doors

It is sometimes desirable to have a passage or service door between the two rooms, and to accomplish this the two methods given in Figs. A-1487 and A-1488 are in use. Fig. A-1487 is a plan and elevation of a partition consisting of four full-size doors and two half doors. The left half of the partition is hung as described above. At the right side, instead of attaching the hanger to I, the door farthest from the half door, it is attached to the next door.

The door I is then free to be used as an ordinary swing door. This method is the more common and gives a reasonable degree of satisfaction on narrow doors, but for wider doors it is subject to difficulty from the door dragging on the floor. It is also necessary to use a little more care when folding the doors, especially if floor guides are not in use. The second method, Fig. A-1488, can sometimes be used to good advantage, and is perhaps the better of the two where conditions permit. This plan and elevation shows two full size and one half door folding toward one side and a separate swing door hinged to the opposite jamb. The swing door is used for service independent of the folding doors.

Hardware

Hangers—For accordion doors are of two types, that is, two-wheel and four-wheel hangers. The two-wheel hangers are designed for use on each full size door, but the four-wheel hangers are attached to each alternate door, beginning with the door farthest from the half door.

Track—When all the doors fold to one side, a length of track equal to the width of the opening, less 8 in., is required. The 8-in. space is convenient for inserting or removing the hangers from the track. When doors fold toward both sides of the opening a 1-ft. space may be left at the center between the two runs of track.

Flush Door Bolts and Pulls—A flush door bolt should be used at the bottom of each door to give the required rigidity to the partition. Ordinary flush pulls are not used. If desired, one flush pull may be used in each full sized door, alternating them on opposite sides of the doors. The pull should be on the opposite side from the hinge pin.

Floor Guides—These serve to steady the doors in operation but are not essential. For illustration of No. 739 floor guides see section on No. 237 folding partition door hardware.

To Specify

Furnish and install according to the manufacturer's erection details, Sliding Accordion Partition Door Equipment as follows:

Set for hanger No. (Select hanger number from table according to weight and thickness of doors) width of opening door height door weight door thickness doors to be (divided in center) (folded to one side only).

To Specify Doors

Note: Key Veneered Doors are furnished and erected by the manufacturer with the installation of Sliding Accordion Partition Door Hardware if desired. See specifications for doors on page 11.

R-W SLIDING ACCORDION PARTITION DOOR HARDWARE

R-W SLIDING FLUSH PARTITION DOOR HARDWARE

Adapted to

Folding partitions requiring unusually wide doors.

Operation

Each door is a separate unit. This door slides on hangers running in two tracks. One track is straight and the other parallel to it except near the side of the opening toward which the doors fold. At this place the track is made in the shape of a compound curve and is separated from the straight track by approximately the width of one door. No floor guide or track is required. The bottoms of the doors are held in place by flush door bolts.

Door Weights

No. 442 hardware is designed to operate doors weighing up to 500 lb. each.

Wicket Doors

A wicket door may be built into any one of the doors. For details, see wicket doors described in section on No. 535 Folding Partition Doors.

Sliding Flush Partition Installation

Hardware

Hangers—Hangers are No. 442, illustrated below: Heavily constructed, dead black finish.

Track—No. 33 straight track and No. 33 curve track illustrated below. Dead black finish.

Brackets—Three types of brackets necessary to install track, 5 and 6x33, 7 and 8x33 and 18 and 19x33 shown below. Location of brackets shown on plan. Dead black finish.

Flush Door Bolts—No. 135, 9 in. long 1 in. wide. Dead black or polished brass finish.

To Specify

Furnish and install according to the manufacturer's erection details, Richards-Wilcox No. 442 Sliding Flush partition doors as follows:

Width of opening....., number of doors....., weight of doors..... lb., door thickness.....

Note: Attach sketch of floor plan showing which way doors fold.

To Specify Doors

Note: Key Veneered Doors, if desired, may be supplied by Richards-Wilcox in accordance with specifications shown on page 11.

R-W No. 434 ROUNDHOUSE AND SHOP DOOR HARDWARE

Description

The R-W No. 434 Hardware was designed primarily to meet the severe service and operating conditions required of roundhouse doors. It is positively the most satisfactory type of door hardware that has been offered for roundhouse, railroad shop and all other car door openings.

The doors are narrow, presenting only half as much area to the wind as the ordinary pairs of hinged doors. The upper corners of the center doors are supported and guided by hangers so the doors cannot be easily blown about by the wind.

On roundhouses it is only necessary to use 12-in. columns with 1-in. stops on each side, between the openings. The doors will fold behind the columns and give an entirely clear opening.

Operation of Doors

No. 434 equipment operates doors in the same manner as the "Slidetite" equipment described in the section on garage doors.

The doors are held open by heavy steel latches. They are bolted in closed position with heavy horizontal steel cane bolts which make no contact with floor or lintel, making the equipment equally suitable for use in buildings having cinder, block or concrete floors. All of the hardware is extra heavy and is adapted to both wood and steel doors.

No. 434 Hardware

The R-W No. 434 hardware consists of hangers, tracks, brackets, hinges, locking bolts and hold open latches. When wicket doors are used, hinges and latch are furnished for the same.

Tracks and Hangers—The hangers and track brackets are the Nos. 435x375 and 1035x375 illustrated on page 68. The track is our No. 375 made of No. 10 gauge steel.

No. 434 Hardware Applied to Wood Doors

No. 434 Hardware Applied to Steel Doors

Jamb Hinges—The jamb hinges consist of a strap made of $\frac{3}{8}$ x2 $\frac{1}{2}$ -in., $\frac{3}{8}$ x3-in., $\frac{1}{2}$ x2 $\frac{1}{2}$ -in., or $\frac{1}{2}$ x3-in. steel which extends entirely across the door. The double eye pintle has a $\frac{3}{4}$ -in. diameter pin. When mounting on minimum width columns, the pintles must be recessed into the column. The two doors of each pair are connected together by heavy double strap hinges made of $\frac{3}{8}$ x2 $\frac{1}{2}$ -in., $\frac{3}{8}$ x3-in., $\frac{1}{2}$ x2 $\frac{1}{2}$ -in., or $\frac{1}{2}$ x3-in. steel with knuckles 5 in. wide. The bolt holes in one leaf of the double strap hinges are made to correspond with the bolt holes in the strap of the jamb hinge. These two hinge leaves are placed on opposite sides of the door nearest the jamb and are bolted together with bolts through the door, in that way forming a continuous hinge from the jamb to the center of the opening. Ordinarily three sets of hinges are sufficient but very heavy doors may require four or five sets of hinges.

Cane Bolts—When floors are earth or cinder large cane bolts operating horizontally with guides and keeper plates are furnished for each pair of doors. The cane bolts slide across the hinged joint of the pair of doors holding them rigid in the same plane and preventing folding. When floors are concrete, wood or block, cane bolts locking into the floor are used and spring bolts are furnished to lock into the head jamb.

Hold Open Latch—A hold open latch bar is attached to the outside of one door of each pair. The hold open latch is attached to a post or a section of rail set in the ground as illustrated. The latch cannot be accidentally released but holds doors positively until manually released.

Wicket Doors—A pair of heavy tee hinges and a heavy warehouse door latch are furnished for wicket doors when so ordered.

To Specify

Furnish and install according to the manufacturer's erection details, Richards-Wilcox No. 434 Roundhouse and Shop Door Hardware as follows:

Number of doors..... For opening..... ft. wide..... ft. high. Thickness of doors..... in. Doors to be equipped with (three) (four) (five) sets of hinges.

Note: All doors in an opening must be of equal width.

JAMB HINGES FOR NO. 434 HARDWARE

No. 434-A Reversible Pad Straight Strap Hinge

No. 434-B Reversible Pad Offset Strap Hinge

No. 434-CC Double Pintle Strap Hinge

No. 434-C Single Pintle Strap Hinge

R-W No. 448 SUPER-WAY MILL-TYPE DOORS

Advantages

The term "Mill-type" as applied to this new door construction has two significations:

First—That of peculiar fitness for mill or factory purposes.

Second—That of "slow-burning."

The underlying merit of Mill-type Doors is contained in the phrase "steel-to-steel," in contrast with the usual construction which is steel-to-wood.

A door operates by being hung on hinges, hangers or other hardware—steel fitted to wood—in which case the strains are transmitted from the steel to the wood through the bolts and screws that hold the hardware to the door. Such doors deteriorate rapidly from strains that are constantly acting to pull the wood members apart.

Adapted To

Super-Way doors are especially recommended for railroad freight sheds, baggage rooms, warehouses, shops, round-houses, and for all factory purposes where strength and permanence are essential.

Description

No Strain—In a Super-Way Mill-type Door there is no strain whatever on any of the wood members. All hardware attachments are made directly to the steel frame. The weight of the doors is carried by the built-in steel frame and by hinges, hangers and other hardware which attach not to wood, but to steel—steel-to-steel throughout.

Frame—A Monarch Mill-type Door consists of a $2\frac{1}{2} \times 1\frac{1}{4} \times \frac{1}{4}$ -in. steel T frame which is complete in itself. The illustrations will show, at a glance, that the wood members have nothing to do with hanging this door, but that the weight is carried by the steel which is not subject to sagging, warping and pulling apart common to ordinary doors.

Wood Units—Tongued and grooved units $1\frac{1}{4}$ in. square are fitted into this frame and nailed through the tongue and groove, piece by piece to each other. The nails are thus em-

Construction of No. 448 Door

bedded between the strips—not a nail exposed anywhere. The strips nearest the T steel frame are nailed to the frame. The illustration below gives a cross section of the standard wood members of a Monarch Mill-type Door. Notice the wide but "shallow tongued and grooved construction" and the slightly round corners. When these units are spiked every 4 in. they form a rigid structure of unusual strength.

Super-Way Mill-type Doors are free from pulling apart of the wood sections. This common complaint in other doors is not experienced because the method of keying the wood members together makes a solid, firm construction, much superior to the paneling of the ordinary door. The wood strips are painted before assembling.

No Bolts—All of the steel members are riveted together, not bolted, making a permanently strong and rigid construction. There are no bolt ends or nuts sticking out anywhere. Everything is snug and trim. The result is a door $1\frac{3}{4}$ in. thick throughout, which is stronger and more durable than any $2\frac{1}{2}$ or 3-in. door built on the usual lines, but lighter than a paneled door of ordinary construction.

On Hinged Doors

The construction of hinged mill-type doors is the same as sliding mill-type doors except that a steel center member is built into the doors, to provide a metal-to-metal attachment for the center hinge as well as for the top and bottom hinges. The outer wood members of large hinged doors can be furnished double thickness or $3\frac{1}{2}$ in. if desired.

Cross Section of Wood Members

No. 448 Super-Way Mill Type Door

R-W No. 778 MULTIPLE OPERATION SCHOOL WARDROBES

General

Richards-Wilcox "Disappearing Door" Multiple Operation Wardrobes occupy the smallest space possible. When doors are open they do not block the aisles. The doors recede into the wardrobe.

Description

Doors—In R-W "Disappearing Door" Multiple Operation Wardrobes, the doors are of the well known Compound construction and manufactured exclusively for the RICHARDS-WILCOX MANUFACTURING Co. by the Compound & Pyrono Door Company, for wardrobe use. All doors unless otherwise specified are made $1\frac{3}{8}$ in. thick, either flush or panel construction.

Hardware—The hardware is of the well known Richards-Wilcox quality and is made of malleable iron, black enamel finish. The pivot arms are ball bearing, made extra heavy and are machined to accuracy. Adjustment is provided in the arms, making it possible to keep the front of the wardrobe in perfect alignment at all times. The operating hardware consists of top and bottom ball bearing pivots, and a set of connecting bars. Shelf brackets, coat hooks, coat hangers, umbrella racks and drip pans are considered interior equipment and can be furnished if desired.

Slate Blackboards—Blackboards of either composition or genuine Bangor slate can be furnished. The slate is attached to the door and held in place with screws and a wood moulding located at the top and bottom of each panel. A cushion of felt is placed between the door and the slate blackboard to

R-W No. 778-FBR

All the doors open in unison when the left-hand door is operated, and are always in the same relative position to each other. Here the doors are partly open.

Ventilation—The R-W "Disappearing Door" Multiple

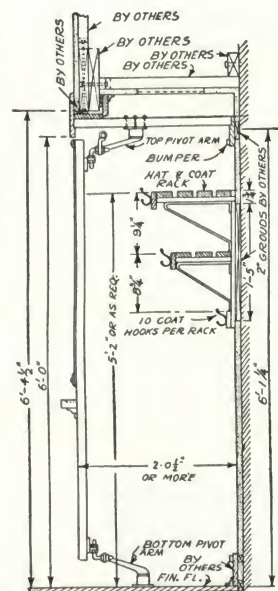

Operation Wardrobe Doors are set 4 in. off the floor. Air currents enter the wardrobe through this space and pass through the clothing, carrying off odors, germs, etc., and then pass out through the ventilating grills located in the top of the wardrobe and connected to the ventilating system.

Each door is 2 ft. 6 in. wide and the depth of the wardrobe is 2 ft. This will accommodate 10 pupils.

Horizontal Section Through Wardrobe

Showing size of plastered recess and location of grounds for five-door wardrobe. Add or deduct 2 ft. 6 $\frac{1}{8}$ in. for each door added or omitted from wardrobe

Vertical Section Through Wardrobe

Showing size of plastered recess and location of grounds

R-W No. 777 DISAPPEARING DOOR SCHOOL WARDROBES

Description

Richards-Wilcox Disappearing Door Wardrobes occupy the smallest space possible. When the doors are open they recede into the opening and do not block the aisles. Richards-Wilcox is prepared to furnish these wardrobes complete for installation including doors, hardware, exterior and interior woodwork, blackboards and chalk rails.

Advantages

Installation of Richards-Wilcox Disappearing Door Wardrobes as a standard equipment in new school buildings, makes it possible to build more

R-W "Disappearing Door" Wardrobe Type 777-A

R-W PAGE 21

buildings for less money. Considerably less space is required for Richards-Wilcox Disappearing Door Wardrobes than the ordinary cloakrooms. The saving in space will more than pay for the cost of the wardrobes.

Operation

The doors recede into the interior of the cabinet on heavy pivot arms top and bottom and are guided by guide tracks and rollers at top and bottom. See illustrations and details.

Doors

In R-W Disappearing Door Wardrobes, the doors are of the

Continued on next page

well known compound construction as pictured elsewhere in this catalogue, and manufactured exclusively for the RICHARDS-WILCOX MANUFACTURING Co. by the Compound & Pyrono Door Company, for wardrobe use. All doors unless otherwise specified are made 1½ in. thick, either flush or panel construction.

Hardware

The hardware is of the well known Richards-Wilcox quality and is made in either bronze, plated, or malleable iron, japanned. The pivot arms are made extra heavy and are machined to accuracy. Adjustment is provided in the arms making it possible to keep the front of the wardrobe in perfect alignment at all times. There is no danger of anyone stumbling over the pivot arms as they are set back a considerable distance into the wardrobe. The guide rollers that engage with the angle iron guide tracks are provided with adjustment to take care of any settling or shrinkage of the floor as well as any unevenness. The operating hardware consists of top and bottom pivots, top and bottom guide rollers, guide tracks and two pull handles. Shelf brackets, coat hooks, coat hangers, um-

brella racks and drip pans are considered interior equipment and can be furnished if desired.

Woodwork

Wardrobes can be furnished in any kind of wood. The most common used woods for the exterior parts of the wardrobes are plain red oak, plain white oak, birch, yellow pine and white pine. The interiors are usually made of poplar or yellow pine.

Blackboards

R-W Disappearing Door Wardrobes may be equipped with either composition or genuine Bangor slate blackboards. There are no mullions used between the sections, consequently you get a continuous blackboard surface.

The slate is attached to the door and held in place with screws and a wood moulding located at the top and bottom of each panel. A cushion of felt is placed between the door and the slate blackboard to take care of any jarring that may be produced by slamming of doors.

DETAILS OF No. 777 SCHOOL WARDROBES

Type 777-A

Type 777-D

Type 777-B

Type 777-E

Type 777-C

Type 777-F

Plans of Types

This section applies to types A-C-D and E

This section applies to type B

This section applies to type F

This section applies to type A-1

Cross Sections

Chalk Rail

Chalk rail has three large screws holding it to the door. An additional moulding or support is placed under the chalk rail and this is also screwed to the door. The chalk rail will carry more weight than can ever be applied to it under normal use.

Ventilation

The R-W Disappearing Door Wardrobe doors are set 4 in. off the floor. Air currents enter the wardrobe through this space and pass through the clothing, carrying off odors, germs, etc., and then pass out through the ventilating grilles located in the top of the wardrobe and connected to the ventilating system.

Security

One of the greatest of class-room evils is petty pilfering. This is absolutely eliminated by the use of Richards-Wilcox Disappearing Door Wardrobes because they are installed in the classroom and constantly under the watchful eye of the teacher.

Types of 777 Wardrobes

Seven types of No. 777 school wardrobes are available. The operation of doors in all types is identical. The variations in types consist in differences in interior equipment, manner of placing in room and other features explained in the description of each type.

Type 777-A—Made with continuous blackboard. This type is made to set in a recess having plastered backs and ends. No divisions are required as the doors when open recede into the wardrobe and form a division. Any number of sections can be used. Each 4-ft. section will accommodate 17 pupils.

Type 777-A1—The construction of this type is identical with Type 777-A with the exception of the method of hanging the wraps.

Type 777-B—This type of wardrobe is made to set against

R-W Disappearing Door Wardrobe Type 777-D

back of the wardrobe to the inner surface of the door and consequently does not prevent a continuous flush blackboard surface.

Type 777-E—This wardrobe, furnished with or without blackboard sections is made to fit into a recess having plastered back and ends. Its units are 5-ft. sections that will accommodate 24 pupils.

Type 777-F—Identical in construction with type 777-A with the exception that the interior is equipped with a number of compartments. Each compartment is supplied with an individual lock.

To Specify

Furnish according to the manufacturer's standard details, Richard-Wilcox No. 777 school wardrobes as follows: Type No. (select type from description and details). Number of units (to fit into recess ft. wide by ft. high by ft. deep). (To set against the wall and to be ft. high, ft. wide, ft. deep.) Wood to be used (select from list given under heading "Woodwork"). Door thickness in.

The wardrobes shall be installed complete by the manufacturer, excepting grounds and base which shall be furnished and installed by the general carpenter or contractor. The trim around the wardrobe shall be considered a part of the wardrobe. All painting and finishing shall be done by others.

R-W No. 377 "RIGHT ANGLE" SCHOOL WARDROBE DOOR HARDWARE

Operation

In opening, each door swings and slides into place (see door plan below) requiring only a small portion of the interior of the wardrobe in which to operate. Practically the whole interior can be used for clothing and hat shelf without interference. Three rows of coat hooks are ordinarily used. A single four-wheel hanger with swivel pendant is attached to the top of each door at its center. Guides at the upper and lower back corners and at the center of the bottom of the doors (see cross sections below) keep it absolutely in line and guide its travel.

Hardware Furnished

Hangers—No. 277, vertical adjustment, swivel pendant. Steel ball bearings in both hanger and pendant. Wheels, metal, 1 3/4 in. diameter. Suitable for doors 1 3/8 in. to 2 1/4 in. thick.

Six Door Wardrobe with No. 377 Hardware

R-W PAGE 23

Track—No. 30 1/2 trolley track, 16 gauge steel.

Channels—Channels for guide pins, upper and lower, hard brass or steel.

Sets of Fixtures—One set of fixtures consists of 2 hangers, 2 pieces of trolley track, 2 pin plates, 4 guide pins, 2 upper channels, 2 lower side channels, 2 angle channels, 4 No. 5x30 1/2 cross eared ceiling brackets.

Finish—All hardware except guide tracks is furnished regularly in black enamel finish. Brass guide tracks are recommended. Special finishes if desired.

To Specify

Furnish and install in accordance with the manufacturer's erection details, Richards-Wilcox No. 377 "Right Angle" school wardrobe door hardware as follows:

Doors..... in. thick, width of doorways....., number of wardrobes....., depth of wardrobes..... with (solid brass guide track) (steel guide track).

Note: Attach plan showing wardrobes to be fitted.

R-W No. 877 UNIT STANDARD WARDROBES

Advantages

The special feature of this wardrobe is the simplicity with which it can be installed. The wardrobes are made up of standard units, as described in the specifications. Each wardrobe is completely assembled at the mill before shipment, and is then knocked down in a convenient form so that any contractor can make the installation without any difficulty whatever. The wardrobe is not attached to the building in any way. After setting the wardrobe in place in the recess allowed for it, it is only necessary to install the trim to cover the space between the wardrobe and the recess.

Sizes

The pupils' wardrobe is built in standard units only, each unit 4 ft. wide, 2 ft. 2 in. deep, and 6 ft. 6 in. high over all. The teacher's wardrobe is 2 ft. 1½ in. wide. Any number of units may be installed together to form a single group.

The units are adapted for use in a plastered recess or for use without a recess in the wall.

Doors

Doors are 1¼ in. thick made in two designs; a two panel design and a flush door. The stiles and the rails of paneled doors have built-up cores of white pine or chestnut with ⅜-in. thick veneer on each side. The panels are ¼ in. thick, three-ply veneer. The flush doors have built up cores of white pine or chestnut with a cross-band and a rotary cut veneer on each side.

Sides

The units have paneled sides or ends with 1½-in. thick solid stiles and rails and laminated panels ¼ in. thick.

Backs

Each unit has a paneled back with 1½-in. thick solid stiles and rails and laminated panels ¼ in. thick.

Floor

The rough floor is made of 1½-in. thick tongued and grooved white pine covered with ⅜-in. thick battleship linoleum or as an alternate, ⅜-in. thick Stedman rubber. The front edge of the linoleum or the rubber is protected by a solid brass edging.

Top

The top is a built-up box section assembled into a single unit.

Exposed End

When the wardrobes are not built into a plastered recess, additional end panels are required.

Hardware, Interior Equipment

The door hardware is mounted to doors at the mill. Each pupils' wardrobe is equipped with two hat shelves, three coat hanging strips, seventeen extra heavy two-prong cast iron coat hooks, one umbrella rack and one drip pan for the umbrellas. The hardware can be furnished in two finishes; all parts dead black or the shelf brackets, coat hooks, hanger aprons, guide brackets and drip pans in unpolished bronze plate and the umbrella racks in polished bronze plate.

Locks and Latches

Locks or latches are required for pupils' wardrobes if blackboards or cork boards are used to hold the doors rigid while using blackboards or cork boards. The No. 0877-C latch, regularly furnished, is a two-point rim latch applied at the center of the opening, latching the two doors together and latching the doors to the top of the wardrobe. The exposed parts are solid bronze in wheeled finish. The knob is wrought bronze.

The No. 877-C lock is similar to No. 0877 latch except that a cylinder locking feature is added.

It is usually desirable to have a lock on the teacher's wardrobe. The teacher's wardrobe latch No. 0877-R is similar to the No. 0877-C except that the two-point feature is omitted.

Trim

When the wardrobes are set into a plastered recess, a casing is required around the wardrobe. This casing is not furnished as a part of the wardrobe. When the wardrobes are not installed in a plastered recess, a crown moulding or other suitable trim is required to finish around the top.

Unit Standard Wardrobe No. 877-PB

Rough Floors

It is preferable to install the wardrobes on the rough floor and lay the finished floor after the wardrobe is installed.

Blackboards

Each door can be furnished with blackboard and chalk rails, all applied at the mill. The blackboards are natural slate 21¾ in. wide x 3 ft. 6 in. high x ⅝ in. thick.

Cork Boards

Cork tack boards can be furnished on each door if required.

Sizes of Plastered Recesses

The depth of the plastered recess is 2 ft. 3 in.; height of the plastered recess is 6 ft. 8 in. The width of the plastered recess for one pupils' unit is 4 ft. 3 in.; for two pupils' units 8 ft. 3 in.; for three pupils' units 12 ft. 3 in.; for four pupils' units 16 ft. 3 in. Add 2 ft. to the length for the addition of a teacher's wardrobe.

Interior Woodwork

All of the interior woodwork is of yellow pine except the panels, which are of fir.

Painting

All prices are based on furnishing the wardrobe in the white: no painting, staining, or filling.

Standard Sizes

The size of the wardrobe units given is standard and is the only size which will be furnished in this type of wardrobe.

Floor Plans of Three-wardrobe Unit with Teacher's Wardrobe, Installed Out in Room—Accommodates 51 Pupils

R-W AIRPLANE HANGAR DOORS AND EQUIPMENT

Description

Almost every hangar, due to conditions over which we have no control, differs from other hangars in one or more respects. Hangar doors and the methods of operating them which are highly satisfactory for use in the South where the climate is warm are often unsuited for use in the North where intense cold and blizzards are met with in the winter months. In one section of the country weatherstripping is non-essential—in another section it is highly important. Where strong head winds are not encountered then it is immaterial whether tall narrow doors or tall wide doors be used.

We manufacture door equipment of almost every description in various weights: light, medium, heavy, extra heavy. From our extensive line of equipment; from our years of experience in the manufacturing of high quality door hardware; from our acquaintance with present day hangar door operating requirements; from our research as to future possibilities and needs; we are exceptionally well qualified to not only advise what method of door operation is best suited for a particular hangar irrespective of its size or location; but are prepared to supply the equipment itself in the shortest possible time.

Quick Operation Essential—The problem of heating and of keeping the heat in the hangar is a vital one and depends a good deal upon how quickly the doors may be opened and closed.

Trolley Track—If the roof trusses or structure above the opening are strong enough the doors may be suspended from overhead track.

Hangar at Cleveland, Ohio, R-W Equipped

Weight on Floor Track
—When, as mentioned above, ease and speed of operating the door are necessary then we recommend that the weight of the doors be carried on ball bearing wheels of large diameter which in turn run on some sort of a floor track, as industrial rail. The top of the door to be equipped with rollers, which help guide the doors, but in no case help support their weight.

It is also important that the industrial rail or other floor rail project an inch or so above the ground. Any

slot arrangement will soon fill with dirt or cinders in the summer or with snow and ice in the winter and in so doing hinder, if not completely stop, the operation of the doors. The slight projection of the rail above the floor level is not enough to in any way impede the progress of a plane either in entering or leaving the hangar.

Weatherstripping—Snow and a great amount of cold air in the winter time and rain, dust and dirt in the summer time will be blown into the hangar not only through the spaces where the doors are joined to one another but also where they come into contact with the overhead and floor tracks unless a very efficient method of weatherstripping is installed.

We have given this phase of door equipment considerable attention and are prepared to furnish weatherstripping for any type door or method of door operation.

Information—We will be pleased to confer with you and to suggest: The style of hangar desirable; its practical location; the best method of operating its doors and of what materials the doors themselves should be manufactured.

R-W PARALLEL SLIDING HANGAR DOOR EQUIPMENT

Description

This equipment, as, will be seen from the illustration, provides for parallel straight sliding doors outside of the hangar itself. There are two methods of applying the equipment. One, by suspending the doors on tracks extending between two A frame steel structures on either side of the opening and beyond each sidewall. Two, doors operating in the same manner as in Number One but with guide rails only at the top extending between two A frames and with bottom rollers carrying the weight of the doors on T rails. As before stated the overhead track method is recommended for lighter doors. For heavier doors or those requiring rapid handling the bottom rail method is urged.

Overhead Trolley Track—When this system is applied to overhead trolley track, the equipment required is identical with that described in previous pages in connection with "sliding around the corner" equipment. The only exception is in the curved track. The track, bracket and weatherstrip assemblies previously described are extended between two A frames and the rest of the hardware required is the same as already described.

Floor Track—When floor track is used and the A frames are utilized for carrying the guide rails out beyond the building line, the equipment is identical with No. 567 hardware already described in the preceding section, with the exception of the top roller, which in this equipment is No. 568, illustrated herewith, and the necessary addition of the A frame structure. The 567 bottom roller is built into the door.

Weatherstripping—Adequate provision is made in both methods of parallel door operation for the proper placing of weatherstripping or astragals.

The Concrete Apron—When floor track is used the concrete apron, especially that part immediately adjacent to the door opening and into which the T rail track which carries the weight of the doors is set, should be of such strength as to easily support the weight of the doors or the weight of any fully loaded planes which will travel over it.

The A Frame—As illustrated, the A Frame is a strong welded steel structure available in the following heights in feet: 12, 14, 16, 18, 20, 22, 24.

R-W TOP AND BOTTOM ROLLERS FOR AIRPLANE HANGAR DOORS

General

The Bottom Rollers described were designed especially for tubular and structural steel airplane hangar doors. Mechanically and scientifically correct designing, high quality materials and careful workmanship guarantee top and bottom rollers which will withstand an unusual amount of abuse, which will last for years and which will permit one man to easily, quickly and smoothly open or close the large airplane hangar steel doors to which they are to be attached. Top rollers only act to steady and guide the travel of the doors. Bottom rollers carry the entire weight of the sliding doors.

No. 574 Bottom Roller

No. 574 Bottom Rollers come assembled as complete units all ready to set into the 12x20 in. spaces allowed for them in tubular and structural steel doors. Each unit is quickly, easily and firmly attached to door with four ½ in. bolts.

Malleable iron and steel is used throughout except that wheel is of cast iron, machined.

Doors weighing up to 3000 lb. each, are easily, smoothly and quickly moved around corners by one man due to the large diameter of the wheel and to the bearings used throughout the unit. Timken bearings may be substituted for the ball bearings in the wheel if so desired. Felt washers protect the ball bearings of the wheel from dust or grit. All bearings are oiled by the Alemite method.

DIMENSIONS OF NO. 574

M	N	O	P	Q	Wheel	
					Tread diameter	Over-all diameter
6 in.	11 in.	*¾ in.	*1 ft. 8 1/8 in.	12 in.	8 5/8 in.	9 7/8 in.

*These dimensions are normal. Adjustment is provided to raise the door ¾ in. or lower it ½ in.

No. 573 Bottom Roller

No. 573 Bottom Rollers come assembled at complete units all ready to set into the spaces allowed for them in tubular and structural steel doors. Each unit is quickly, easily and firmly attached to door with four ½-in. bolts. Cast iron and steel is used throughout, wheel is machined. Doors weighing up to 3000 lb. each are easily, smoothly and quickly moved by one man due to the large diameter of the wheel and to the bearings used throughout the unit. Timken bearings may be substituted for the ball bearings

Wheel operates on a minimum radius curve of 2 ft. 6 in. Wheels are machined for 12 or 16-lb. A.S.C.E. industrial rails as ordered. When ordering state weight and make of rail.

To adjust roller remove top plate, loosen lock nut and turn adjusting screw up or down to desired position. There is a total vertical adjustment of 1 ¼ in.; ¾ in. up and ½ in. down from normal position. Bottom of door when in normal position is ¾ in. above top of industrial rail.

in the wheel if so desired. Felt washers protect the ball bearings of the wheel from dust or grit. All bearings are oiled by the Alemite method.

To adjust roller remove top plates, swing out lock plate which is loosely riveted to adjusting frame, and turn adjusting screw up or down to desired position. There is a total vertical adjustment of 1 ¼ in.; ¾ in. up and ½ in. down from normal position. Bottom of door when in normal position is ¾ in. above top of industrial rail.

DIMENSIONS OF NO. 573

M	N	O	P	Q	Wheel	
					Tread diameter	Over-all diameter
6 in.	11 in.	*¾ in.	*1 ft. 8 1/8 in.	12 in.	8 5/8 in.	9 7/8 in.

*These dimensions are normal. Adjustment is provided to raise the door ¾ in. or lower it ½ in.

No. 573 Top Guide Roller

Made especially for use with tubular and structural steel doors weighing up to 3000 lb. each. The large diameter of the roller plus its graphited bronze bushing accounts for its ease and smoothness of operation.

Furnished in three sizes for attachment to 2 ½, 3 and 4-in. tubular steel doors.

DIMENSIONS OF NO. 573

Cat. No.	Thickness of door	A	B	C	D	E	F	G	H	J
573-1	2 ½ in.	1 ½ in.	2 ¼ in.	2 ¼ in.	4 1/8 in.	4 5/8 in.	1 ¼ in.	7 in.	8 in.	4 7/8 in.
573-2	3 in.	1 ½ in.	2 ¼ in.	2 ¼ in.	4 1/8 in.	5 1/8 in.	1 ¼ in.	7 in.	8 in.	5 3/8 in.
573-3	4 in.	1 ½ in.	2 ¼ in.	2 ¼ in.	4 1/8 in.	6 3/8 in.	1 ¼ in.	7 in.	8 in.	6 3/8 in.

Wheel Lock and Bumpers

The R-W Wheel Lock illustrated here-with is an integral part of the roller. There are no springs or cams, no parts to wear, break or get out of order. The threaded shaft screws plug against web of wheel, braking it firmly.

The Top and Bottom Bumpers shown prevent injury to doors, which contact with heavy rubber pad on end of plunger. A sturdy spring absorbs all shock.

DOORWAY

EQUIPMENT

McKEE DOOR COMPANY

Manufacturers of McKee Overhead Garage Doors for Garages, Service Stations, Factories and Warehouses

6224-6228 South Oakley Avenue
CHICAGO, ILL.

Description

Doors are made in approximately 2-ft. high horizontal sections hinged together. Sections raise vertically engaged in guide tracks moving to a horizontal position inside and above door opening. Doors are counterbalanced with an easily adjusted motor spring which winds on itself and cannot be overloaded. Ease of manual operation is thus insured.

Advantages

The motor spring is fully encased in a sealed steel sheave, packed in graphite lubricant, guaranteeing safety of operation. Valuable space is saved by placing the open doors entirely out of the way under ceiling. Quiet operation is insured by the cable lift and motor spring.

Construction and Materials

All hardware and operating mechanisms have been carefully and simply designed.

Doors are furnished with ball bearing rollers.

Stock doors are paneled sections and may be furnished with one or more sections open for glass.

Wood doors are blind mortised and tenoned with substantially built stiles and rails of white pine with three-ply fir panels.

The Counterbalancing Motor Spring
Adjustable, efficient, durable, safe, powerful, encased, neat, compact.

Inside View of Door Showing Hardware

Adjoining sections are rabbeted $\frac{1}{4}$ in. Sections are not over 26 in. high.

Specially designed doors can be built to specification.

Hardware Furnished

All hardware is of steel, furnished either plain or galvanized. For smaller doors ball bearing rollers with seven balls and tracks with bracket supports are used. Rollers with eleven balls and special track reinforcement are provided for larger size doors.

Truss Rods and heavier hardware is used for larger size doors.

Locking Device

Doors may be locked and unlocked from either side. Substantial locking rods engage track members on either side of door by a lock throw disc. A Corbin lock automatically engages the disc. Cylinders may be had furnished keyed alike.

Space Requirements

Stock doors 8x8 ft. and smaller can be furnished on $7\frac{1}{2}$ -in. center pier and 4-in. side space.

A clearance of 14 in. is required on all doors above opening.

Larger doors require space out-

lined in jamb detail below.

FARLEY & LOETSCHER MFG. CO.

Manufacturers of "Weatherseal" Garage Doors

DUBUQUE, IOWA

For our page on Disappearing Stairs, see Manufacturers' Index

Products

"WEATHERSEAL" No. 800 GARAGE DOORS
(Patents Pending).

Also Sash, Doors, Blinds, Frames, Interior
Finish and Building Specialties.

Locking Device

A special high grade cylinder lock, operated in connection with spring bolts is included. Doors open or lock from either side, and automatically lock when closed, if desired.

Description

Each complete "Weatherseal" door includes three sections, top glazed with plain glass set with wood stops, center and bottom sections 3-ply fir panels. Panels are dipped in pure linseed oil before assembling. Waterproof glue is used throughout. Stiles and rails clear white pine, 1 3/4 in. thick. All joints of door stiles and rails doweled with 5/8 in. hardwood dowels. In addition, hinges and brackets overlap, reinforcing the joints at every vital point—sixteen joints thus reinforced. The hinged intersections are deeply rabbeted, making them weather tight.

Doors are squared and completely assembled at the factory with door hardware attached, ready to hang. Everything to complete the installation is furnished, except door frame, casing, ceiling pulley boards and weight box material.

Head Room and Clearance

A minimum of only 1 3/4 in. head room is required above top of doors for installation. Clearance between the rear bumper of car and door about 12 to 15 in. Bottom panel requires 2 ft. 6 in. clearance at a point 6 ft. from the floor line, to swing open.

Doors when folded up reduce the height of the opening 7 in., leaving 7 ft. 5 in. clear in the 8 ft. openings and 6 ft. 11 in. in the 7 ft. 6 in. openings.

Advantages

There are practically no restrictions on the installation of "Weatherseal" Over-head Garage Doors. They overcome the annoyances characteristic of ordinary doors, such as sagging, twisting, binding and scraping, yet seal the opening perfectly weatherproof all around, as the door in closing is automatically forced tightly against the stops at sides and top. The bottom is scribed to the floor. This makes the garage easy to heat. Snow and ice do not interfere with their operation.

Swelling of doors or raising of the floor by frost cannot cause the doors to bind, as the special hanger brackets allow for more than 1 in. expansion or heaving. Doors are perfectly counterbalanced with weights and glide easily to an over-head position, giving an unobstructed opening. When closed, doors are held at eight points. Entirely mechanical in operation—no springs to break or lose their tension. The low ceiling possible with "Weatherseal" doors materially reduces the cost of the garage and saves in the heating.

Hardware

All hardware is included. Hardware is made of steel and malleable iron, black japanned. Pulleys are roller bearing with turned wheels. Chain is twist link, welded and galvanized. Counterbalancing weights are cast iron, made in sections.

Operation

Operates from inside or outside with equal ease. When the two spring bolts are released, the doors break inward away from the stops. The upward lift folds the doors at top of the opening. Entire operation requires less time than opening ordinary garage door.

Shipping and Weights

Shipped one door in crate. Hardware and weights separate. Complete instructions for installing included. Shipping weight approximately: 8x8 ft., 395 lb.; 8x7 ft. 6 in., 375 lb.

Sizes and Designs

"Weatherseal" Garage Doors are made in two stock sizes, 8x8 ft. by 1 3/4 in. and 8x7 ft. 6 in. by 1 3/4 in., and in the design illustrated. This design, however, can be varied on special order according to detail; other sizes can also be made to order.

Illustrated folders and complete price information on request.

Address Dept. S-31.

CEILING PLANS FOR LOCATING PULLEY HOOKS AND WEIGHT BOX

High Ceiling

Vertical section, when head room "A" is 6" or more. When head room exceeds 10", frame down pulley board preferably to 6" as indicated by "B"

Low Ceiling

Vertical section through door frame when head room is limited.

In openings having 6" or more head room, pulleys are placed above doors thus requiring only 3 1/4" minimum for each pulley. See meas. "C"

In openings having less than 6" head room, pulleys must be placed between doors, thus requiring 4 1/2" minimum for each pulley. See meas. "C"

Multiple Opening Mullions

LOCATION OF WEIGHT BOX FOR MULTIPLE OPENINGS

For triple or quadruple opening, use same layout as for twin opening, and locate weight boxes for center doors along side walls. For these installations center doors will require longer chain, which must be specified if wanted.

Weight boxes for other than the two end doors may also be centrally placed behind mullion, 3 feet from inside of mullion as indicated. If mullions are 13" or 14 1/4" (depending on ceiling height) or wider, weight box may be located directly behind mullion as illustrated above.

DOOR FRAME OPENING

New opening should be same size as door, set flush with inside of wall. The stops provide the necessary lap to seal the opening. It is advisable to use 1 3/4" jamps.

In old openings slightly under-size, door can lap over the frame an inch or less on each side and 3" or less on top, without difficulty. In oversize old openings, false jamps can be attached to fill out. Be sure, to have proper anchorage at top of the side jamb for hanger brackets, as these are under considerable strain when the door is open.

MEASUREMENTS FOR CEILING PLANS

Note that measurements given are always figured from the outside face or edge of door.

- C** { 3 1/4" minimum if head room is 6" or more.
4 1/2" minimum if head room is less than 6".
- D** { 3 1/4" minimum.
- E** { 3-0 minimum if "D" is 3 1/4" to 6".
1-7 minimum if "D" is 6" to 11".
7" or as near as possible forward or backward if "D" is 11" or more.
- F** { 13" for doors 8'-0 high.
12" for doors 7'-6 high.
- H** { 3 1/4" when head room is 6" or more.
4 1/2" when head room is less than 6"
- I** { 2" on all installations.
- K** { Not less than 6 1/2" when head room is 6" or more and not less than 9" when head room is less than 6".
- L** { Not less than 6 1/2" when head room is 6" or more and not less than 7 3/4" when head room is less than 6".

FRANTZ MANUFACTURING COMPANY

MAIN OFFICE AND FACTORY
STERLING, ILL.

BRANCHES

NEW YORK, N. Y., 71-73 Murray Street
CHICAGO, ILL., 553 West Randolph Street
INDIANAPOLIS, IND., 412 Board of Trade Building

ST. LOUIS, MO., 2029 Bellevue Avenue
LOS ANGELES, CAL., 302 East 4th Street
SAN FRANCISCO, CAL., 667 Howard Street

Product

FRANTZ "OVER-THE-TOP" DOOR EQUIPMENT for OPERATING UPRIGHT DOORS opening OVERHEAD. A practical type of mechanism for use on the doors of private, apartment house and public garages; warehouses; greasing and filling stations, and similar buildings. Produced and distributed by manufacturer of a full line of *guaranteed* Builders' Hardware who has enjoyed relations with building trades over a long period of years.

FRANTZ
Guaranteed Builders Hardware
"Over-the-Top" Door Equipment

6 in. wide, specify Equipment No. 78.

Cost

Retails everywhere for \$32.50 (complete equipment ready to install—doors not furnished). An inexpensive method for satisfactory "overhead" door operation. Low

cost is made possible by simplicity of mechanical details and *elimination* of need for special doors, counterbalance weights, pulleys and cables, excessive trackage, etc.

Specifications

For equipment for doors opening overhead specify Frantz "Over-the-Top" Door Equipment made by the FRANTZ MANUFACTURING COMPANY, Sterling, Illinois, U.S.A. For openings 7 to 8 ft. high and up to 8 ft.

Distribution

Available for purchase at hardware stores, building supply dealers, lumber yards and similar outlets everywhere.

ADVANTAGES OF CONSTRUCTION

Adaptability

Frantz "Over-the-Top" Door Equipment No. 78 can be installed by the local carpenter on *any* set of *old* or new doors that measure from 7 to 8 ft. high and up to 8 ft. 6 in. wide. Requires but 2 in. of room above the head jamb. Easily adjustable for varying weights of doors. Ideal equipment for replacing hardware of swinging, sliding, sliding-folding or "around-the-corner" type outfits that are giving unsatisfactory service. (Note: All the illustrations on these pages are of installations made on *old* doors.) Adaptable for use on specially designed upright doors for palatial residence garages. Periodic "servicing" of this equipment is not necessary.

Operation

"Three Seconds and it's Open." Most satisfactory and convenient for operation by women and children.

A slight pull on the handle, on the outside, and door rises without effort and comes to a stop in "overhead" position without interference from operator. The same effect can be accomplished from the inside of building by a gentle push with the foot at the bottom of the door.

To close, operator applies outward thrust while grasping pull cord and door comes down into the opening as easily as it went up. Operation up and down is practically automatic.

Appearance

Handle and face of cylinder lock are only pieces of hardware exposed on outside of door. Permits use of attractive standard glazed doors, obtainable at local lumber yard, or doors made to architect's specifications.

Construction

All parts of wrought steel for strength and durability. Power for lifting door is supplied by two huge, heat treated and oil tempered coil springs of which less than one-half the capacity is required in operation—a wide factor of safety. Mechanisms are of the simplest nature possible consistent with long, dependable service. Provision is made for combining two or more stiles to become one, solid door. When door is up opening is 100% clear.

Installation

Can be installed quickly and easily. Any carpenter, following the fully detailed and illustrated instruction sheet furnished, can complete installation in a comparatively short time. No special or complicated cutting or fitting is required. For example, note simplicity of

"overhead" trackage and methods of holding it in place.

Jambs are made weathertight by simple carpentry as outlined in instruction sheet. For installations on double opening or 2-car garage doors, center post is required to be 7½ in. or more wide. (Fig. 1, opposite page.)

Clearance

Door operation is so controlled that ample clearance is provided both behind and above automobile when opening or closing. For example, rear bumper of a car may be against door when closed without door striking top of car when door is operated up or down. Where necessary, this feature can be capitalized upon by saving considerable floor space.

Note: The dimensions and details given below apply to standard openings—from 7 to 8 ft. high and up to 8 ft. 6 in. wide—for which Frantz "Over-the-Top" Door Equipment No. 78 should be specified. Similar information pertaining to larger openings can be obtained from Dept. SC, FRANTZ MANUFACTURING COMPANY, Sterling, Illinois.

TRADE-MARK

ing to desired tension. Greater strength and absolute elimination of warping and buckling.

Heavy steel tracks in which the rollers operate.

The pulleys and rollers are provided with ball bearings running on hardened surfaces.

This provides a frictionless operation which with an exact counterbalance enables the door to be operated without noticeable effort.

One large oil tempered helical steel spring with a great factor of safety is used to counterbalance the door, and as both sides of the door are connected to this spring equalized action is obtained. Air craft cable with a factor of safety of not less than ten, connects door to counterbalance spring.

"Rol-Top" Features

The door sections are made of best grades of wood. The stiles, rails and muntins are mortised and tenoned together, doweled with steel dowels and glued with casein waterproof glue giving a section that is firm, rigid, square at joints and light in weight.

All sections are reinforced with horizontal bars U-shape anchored at both ends with means of tighten-

Rol-Top

Perfectly counterbalanced.

Will not sag.

Ready to operate easily in all kinds of weather.

Made of sturdy material.

Manufactured by a company with over thirty years' door experience.

Reinforcing bars (trusses) give greater strength and rigidity.

Cast iron breaking bracket insures tight fit at top and jambs.

Malleable iron hardware. Strong secure locking device with cylinder lock.

Single spring counterbalance.

Continued on next page

All hardware is of malleable iron bolted through door sections. Hinges are exact in design and of great strength and rigidity. Locking device of malleable iron, and of special design to use with standard cylinder lock which will permit individual or master keys, and designed to lock or unlock from either side.

Easy operation inside or out and chain equipped with smooth cast iron ball for raising and lowering the door.

Door when closed is made snug at top, sides and

bottom, as an especially designed guide bracket forces the top section of the door into place.

On large doors mechanical operation is provided by means of endless chain. Electrical operation on all sizes where desired provided with push button control at desired locations.

Sizes in stock for immediate shipment 8 x 8 ft. and 8 ft. x 7 ft. 6 in. and our facilities permit prompt shipment on odd sizes.

Consult the Kinnear office or agent in your city for any data you may wish.

MAJESTIC VERTI-FOLD DOOR

Patent No. 1178945—Other Patents Pending

Description—This door is a new type that embodies many exclusive features of construction and operation due to its unique and patented design. It is particularly adapted for use in garages, warehouses and factories.

Method of Operation—Instead of swinging or sliding, the door folds and unfolds vertically so easily that it is almost self-operating. Ice and snow and temperature changes do not interfere with its operation and once installed, it will permanently function with ease and convenience, as door will never sag or stick. Door may be locked or unlocked from either side.

Installation—No tracks on ceiling and no springs are required. Door guides and counter balances are safely housed in slender metal casings installed just inside door jambs or these casings may be built in, if desired. Less than the usual ceiling height is needed. Comes completely assembled and crated, with all hardware in place including Yale lock. It is the easiest and quickest of all doors to install because fitting and adjustment are unnecessary.

Construction—Woodwork, made by specialists in door construction, is of the best quality White Pine and Fir. Joints are tongue and grooved. Door, equipped with flexible weatherstrip at bottom, fits snugly against frame providing a complete and weatherproof fit all around. Primed at factory with aluminum paint. Unprimed doors optional.

Design—Is attractive and will harmonize with any building design.

Product

"EASYFOLD" EQUIPMENT for Folding Partitions.

"EASYFOLD" EQUIPMENT for Wardrobe Disappearing Doors.

"RED RIB" EQUIPMENT for Accordion Doors.

"SLIDEASY" and "EASYFOLD" EQUIPMENT for Garage Doors.

"OPENEASY" ELECTRIC DOOR OPERATORS.

"Easyfold" Equipment for Partitions

"Easyfold" Equipment originally was designed and, through years of experience, has been improved and perfected to meet every requirement of strength and durability in construction, simplicity in design, and the extreme of ease in the operation of folding partitions. Headroom of only 31½ in. is required for the track. It may be used in new or in old buildings.

Description—Heavy track of cold rolled steel is suspended from above in strong tight-locking brackets. Hangers, easily accessible and of positive adjustment, are of malleable iron and drop-steel forgings with dust-proof ball bearing swivels—an exceptional construction. Double grooved wheels run on arched treads, reducing friction to minimum, span the slot in track and prevent spreading. Floor guide of extruded brass, with interlocking and removable top plates, cannot rust. The V-shaped dust pocket is cleaned easily by vacuum or by hand. Door guides have case-hardened ball bearing wheels, of large diameter, which rotate horizontally and take all side thrust in floor guide with no shearing action as doors fold. Ball bearing emergency rollers, with wide tread, have no contact with level floor. They protect uneven floors. Compensating jamb springs function always.

Doors—Partitions may comprise any number of doors; an even number if possible. Doors move in units of two, fold at either jamb or at both jambs, or travel past jambs and fold at wall or column. A hinged passage door may be built into any unit.

All doors in a partition must be of equal width,

1¾ to 3 in. thick. Doors may be of regular type, soundproof, or fireproof construction; flush, glazed, paneled, or designed for blackboards.

Soundproof Doors—"Easyfold" equipment, combined with Evanston Soundproof Doors, comprises the "Easyfold" Hamlinized Folding Partition, which has no superior in retarding the travel of sound or in ease of operation. Doors are sealed tight at top, bottom, and sides.

"Easyfold" Hardware Comprises—

Overhead track; brackets with lags or bolts; adjustable hangers; bottom guide wheels; emergency rollers; adjustable top and bottom pivots for end door at folding end; compensating jamb springs; floor guides, and special sills and braces for passage doors.

Finish—Access cover plates are bronze. Edge plates are plain to stain or dead-black, or special finish as specified.

Specifications—Doors, jambs, and trim to be as detailed, furnished with Topping "Easyfold" Equipment No. 10600, and installed by contractor in strict accordance with details furnished by THE TOPPING MANUFACTURING COMPANY. (When the Hamlinized Folding Partition is specified, use "Easyfold" No. 10600 H.)

For butts (or invisible hinges), flush bolts, door pulls, latch or lock sets for passage doors, see specifications for "Finishing Hardware."

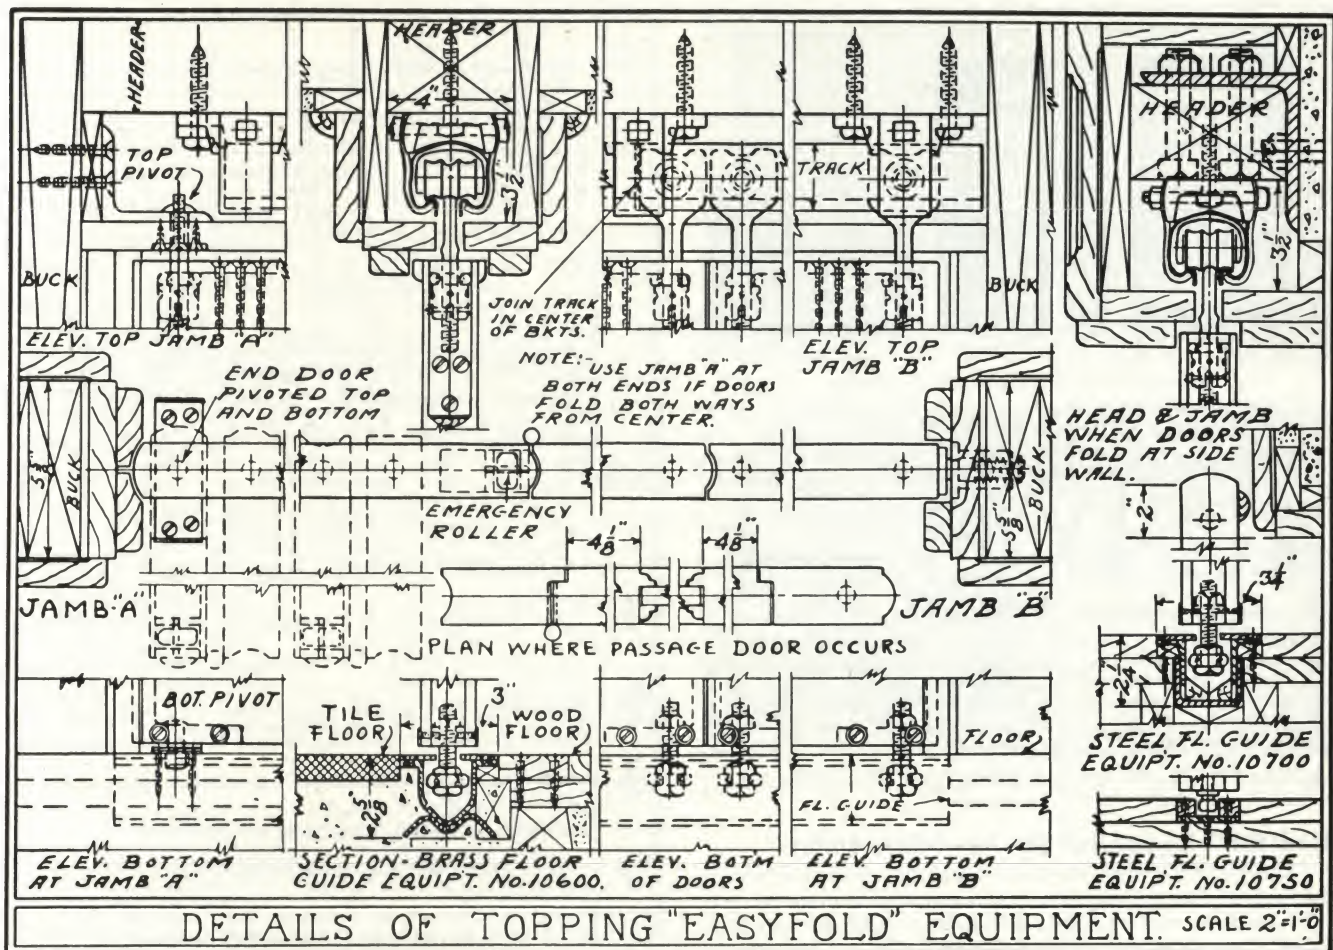

Butts for folding doors to be steel [bronze] [Soss Invisible Hinges]. Flush bolts to be

THE TOPPING MANUFACTURING COMPANY'S No. 609, with backset to center the doors (made with ¾, 1, 1½, 1¾, 1½, and 1¾-in. backsets) and bolt head to fit slot in floor guide. Flush door pulls to be THE TOPPING MANUFACTURING COMPANY'S No. 608 (No. 607 if doors are small). Latch [lock] with proper backset and with cup and drop handles both sides for passage door, all furnished to match other hardware in parts where these occur.

Neil House, Columbus, Ohio
GUSTAV W. DRACH, Architect

D-E.W.S.

"Easyfold" Equipment for Wardrobe Disappearing Doors

Wardrobes equipped with "Easyfold" No. RR500 insure ease of entrance and exit. They contribute to safety. The doors do not project into aisles; they disappear entirely into the wardrobe when opened. Permanent adjustment, ease of installation, and quiet operation are other distinctive features.

"Easyfold" Wardrobe Hardware—Comprises overhead track, tight-locking brackets with lags, adjustable hangers with rubber wheels and dustproof ball bearing swivels, door guides with wide tread ball bearing rollers, and sound deadening felt strips at jamps.

Note: Use hard maple strips for floor guide, beveled on one side and laid 3/4 in. apart, or build slot in floor; angle guides furnished when specified. "Easyfold" No. 500-1 requires 6 1/2 in. headroom and No. 500-2 requires 5 1/2 in. headroom above door. Side track requires 6 in. from top of door to finished ceiling. Doors must be 1 3/4 or 1 1/2 in. thick. Wardrobe units 4 ft. wide with doors 1 ft. 1 1/4 in. wide must be at least 2 ft. deep in clear.

Wardrobe with Disappearing Doors

Doors disappear entirely within the wardrobe when open, causing no obstruction in the aisle

Specifications—All wardrobes shall be built in by the contractor as detailed. Doors to be 1 $\frac{3}{8}$ in. [or 1 $\frac{1}{4}$ in.] thick and Topping "Easyfold" Equipment No. RR500-1 [No. RR500-2] to be furnished and installed by the contractor in accordance with details to be furnished by THE TOPPING MANUFACTURING COMPANY, Ashland, Ohio.

Note: Specify blackboards on doors, vent grilles, shelves, and umbrella racks, if desired. Specify also, if desired, door pulls or friction catches and coat hooks with "Finishing Hardware."

"Red Rib" Equipment for Accordion Doors

Comprises these superior features: side friction is eliminated; hanger adjustment is easy of access, simple, and positive; tandem wheel hangers may be used on doors 1 $\frac{3}{8}$ in. thick or thicker; "Easyfold" adjustable pivots on half doors insure perfect operation under changing structural conditions and perfect alignment with full width doors.

Light doors require only 2 $\frac{7}{8}$ -in. headroom, and heavy doors 1 $\frac{3}{4}$ in. thick or thicker only 3 $\frac{3}{8}$ -in. headroom between header and soffit. The pivoted half door requires $\frac{1}{2}$ -in. additional headroom.

Description—Track, brackets, and hangers are of same superior construction as detailed in description of "Easyfold" equipment. Floor guide is built of cold rolled steel, with $\frac{3}{4}$ -in. slot; all surfaces smooth and lacquered. Door guide with ball bearing, wide tread roller, rotating horizontally, eliminates friction. This floor guide with door guides prevents doors from dragging on floor. They should be specified with "Red Rib" equipment.

Doors—Openings may have any number of doors. Doors should not exceed 3 ft. in width. If pivoted, a half door must be exactly one-half width of full door plus 1 $\frac{1}{8}$ in.; if hinged to jamb, it must be exactly one-half width of full door less distance from center of track to center of butt pin. Beginning with door farthest from half door, a hanger is used on every other door.

Specifications—Furnish and install for all accordion doors, "Red Rib" Hangers No. 105B, Track No. 92, Brackets No. 092C, to be spaced as recommended by the manufacturer, Floor Guide No. 750 for full width of opening,

Accordion Door and Floor Guides

Hanger

Door Guides No. 753 $\frac{1}{2}$, and Flush Bolts No. 609, all as manufactured by THE TOPPING MANUFACTURING COMPANY, Ashland, Ohio.

Note: For doors 1 $\frac{3}{8}$ in. thick, or for 1 $\frac{1}{4}$ -in. doors, specify "Red Rib" Hangers No. 105A, Track No. 91 and Brackets No. 091C. Specify "Easyfold" Pivots No. 604, butts, flush bolts, flush door pulls or lock trim for doors under "Finishing Hardware."

"Easyfold" Equipment for Garage Door No. EG900

Is not visible from outside and is designed especially for the private garage of high grade construction with wide openings of any number of doors, all doors opening in and folding away from jambs, parallel with and against sidewalls. It is not designed

Interior View Showing Doors Folded at Sidewalls Entirely Removed from the Opening

for doors opening out. Track, brackets, and hangers are concealed.

Operation—Doors, suspended from above, roll in units of two between stops at header, which are omitted at ends where doors fold. Opening is clear when doors are folded. Doors cannot fold in opening.

Note: Doors must be at least $2\frac{1}{4}$ or $2\frac{1}{2}$ in. thick; joints rabbetted or astragal. Head and jamb casings should be screwed on. Any one of doors may have wicket door.

EG900 Equipment—Comprises track, brackets, and hangers of same superior construction as detailed in description of "Easyfold" equipment for folding partitions; steel floor guide, heavy door guides with brass rollers, door stops, door pulls, butts, and automatic cylinder door lock.

Specifications—The large opening [openings] shall have doors $2\frac{1}{4}$ in. thick, constructed as detailed. Doors shall be fitted with Topping "Easyfold" Equipment No. EG900, with floor guide and track extending to both sidewalls, and shall be furnished and installed by the contractor according to details furnished by THE TOPPING MANUFACTURING COMPANY, Ashland, Ohio.

Note: When detailed with wicket door, the cylinder latch desired and Topping Drop Pulls No. 677 should be specified.

"Slideasy" Equipment for Garage Doors

Meets the popular demand for a durable and thoroughly efficient equipment at low cost; made in standard sets for light or heavy doors, opening in or out, in two sizes, requiring 7 or 8-in. headroom, respectively, and special sets for doors opening out with track concealed inside.

Doors Opening Out, Equipped with "Slideasy" Equipment No. 99A3

"Slideasy" Equipment—Comprises "Red Rib" track with arched tread, heavy adjustable brackets, adjustable tandem wheel hangers, with or without hold-open device operating automatically inside of track; aprons with long supporting sleeves; latch, pull, and binder which control operation of door bolts top and bottom; interlocking door and floor guides which hold doors securely at bottom against jambs and sill; and butts or hinges as required.

Specifications—Furnish and install "Slideasy" Garage Door Set No. 097A (for heavy doors, No. 097B, or, if desired with "hold open" hanger, No. HO-097B).

Note: If butt hinges are wanted at jambs, specify No. 97A for light doors and No. 97B or No. HO-97B for heavy doors. Sets Nos. P97A, P97B, and HO-P97B have heavy offset pintle hinges to swing doors clear of opening.

Lock for free or entrance door is not included in set. It should be specified separately.

Doors Opening Out, Equipped with "Slideasy" Equipment No. 99A3

For Garages of the Better Class—99A equipment assures distinction in appearance and ease in operation for garages of the highest type. Track secured to head jamb inside is concealed from exterior view when doors are closed. Doors open out and may fold at one jamb or at both jambs. Regular equipment is furnished for openings of 3 to 6 doors. Special equipment is furnished to order for openings of 7 to 10 doors. Details will be furnished on request.

Specifications—Furnish and install "Slideasy" Garage Door Equipment No. 99A, as manufactured by THE TOPPING MANUFACTURING COMPANY, Ashland, Ohio.

Note: Locks for free or entrance door and roller wheel guard No. 185 are not included in set. They should be specified separately.

"Openeasy" Electric Door Operators

A simple, practical, and durable electrical device for automatically opening and closing doors of all types in public and private garages, fire stations and warehouses. Complete catalogue mailed on request.

Doors Open Clear of Jambs with "Openeasy" Electric Door Operator

BARBER-COLMAN COMPANY

Manufacturers of Garage Doors and Garage Door Operators

ROCKFORD, ILL.

For our pages on Temperature Control and Furnace Regulators, see Manufacturers' Index

BARBER-COLMAN DOOR OPERATORS

The Operator

Description—The Barber-Colman Door Operator is a device for opening and closing garage doors electrically; it is designed for operation by either switch control or radio control, or both. It will operate nearly all types of swinging, sliding or overhead doors. Power is transmitted by a standard motor unit through members which differ according to the type of door. An adjustable "overload release" device removes all power from the door when it strikes any obstruction. Provisions for reset and for manual release are simple and convenient. All parts of the machine are easily removable and standardized. The standard operator is designed to run on 110-volt, 60-cycle a-c. Operators can be furnished to run on 220-volt, 60-cycle a-c., 110-volt d-c., or 220-volt d-c.

The Operator

The Transmitter

The Receiver

Outside Switch

Drive-
way
Post
Switch

Radio Control

How It Operates—The Barber-Colman Radio Controlled Door Operator makes possible the opening and closing of garage doors by means of a radio transmitter operated from the instrument board of a car. Coded signals make it private. A series of radio impulses transmit a message that will open only the door for which they are coded. The operating mechanism holds the door open and does not allow the wind to blow it shut. When the door is closed it is securely locked by a mechanism that cannot be picked. At night, radio signal from car not only opens doors but also automatically turns on garage lights.

Transmitter—Each car which is to control a door is equipped with a transmitter that broadcasts a particular series of impulses. A pull on the transmitter knob conveniently placed on the dashboard causes this code to be sent automatically. The transmitter consists of three main parts: the timer, the spark coil unit and the transmitting antenna. Power is drawn from the car battery and consumption is negligible. The timer, which governs transmission, is encased in a small box and clamped back of the instrument board. The spark coil unit, enclosed in a watertight box clamped to the main

frame, furnishes the high frequency current necessary for broadcasting. This current flows through the transmitting antenna which consists of two lengths of rubber insulated wire suspended diagonally under the car. The wire is mounted in such a manner that there is little danger of mechanical injury. The only part of the transmitter in evidence is the knob on the instrument board.

Receiver—The receiver unit is contained in a box about 1 ft. square and 1½ ft. long mounted on the wall inside the garage. Connected to it is the receiving antenna which consists of a wire buried in the driveway. The receiver analyzes the coded signal from the car and, if it is the proper code, trips off the electric operator which opens and closes the door. A selecting mechanism in the receiver makes it responsive to two different codes for garages having two doors. The receiver requires 110-volt, 60-cycle a-c., the power ordinarily furnished for house lighting. The single vacuum tube used in the detecting circuit of the receiver is of the type used in automatic train control equipment. The mechanism is simple in design and reliable in operation.

Switch Control

Self-restoring Switch—A self-restoring toggle switch is furnished with each operator as standard equipment. It can be installed in a standard surface or flush type switch box in the house or garage. It will control two door operators selectively.

Driveway Post—Conveniently installed at the side of the driveway for operation without leaving the car. The lock-switch in the post head makes a contact when the key is inserted, which opens the doors. A self-restoring toggle switch, not locked, is also provided in the post head by which the door can be closed but not opened.

Outside Switch—This switch, like the driveway post, embodies the lock switch for opening and the free switch for closing. It may be used in place of the post where a wall or fence affords a convenient location.

BARCOL OVERDOOR EQUIPMENT

Description

The Barcol Overdoor is an "overhead" type door, made in sections and carried on rollers in tracks so that, to open it, it is pushed up. When open, the door lies flat along the ceiling above and inside the doorway, occupying no wall space inside the opening.

Door Parts

The sections of the Barcol Overdoor are hinged together, and the ball bearing rollers which carry them run in steel tracks that are vertical to a point near the top of the opening when they turn on a 15-in. radius and run horizontally as far as necessary to support the full height of the door.

The counterbalancing coil springs are located, as shown, above the sides of the opening. This type of construction requires only 12½-in. headroom.

Springs—Springs are made with a special mounting, providing a means by which they can be cut to exact length

to counterbalance weight of door at every point of its travel.

Rollers—These are located at every section division, supporting the door along its full height. Tight closing at all points against the stop strips is obtained by means of special hinge roller plates which swing out with a lever action during the last 2 in. of the door's travel.

Rubber Astragal—This, along the bottom of the door, adds flexibility to the seating, and makes a seal which follows irregularities in the floor.

Special Hinges—Hinges which have a tubular pin are used, giving a large bearing surface and insuring long life and satisfactory operation.

Handle with Yale Lock—A handle is provided by which the door can be opened from either the inside or the outside. A spring-operated latch is arranged to catch automatically when the door is closed.

Stiles and Rails—Made unusually thick, and strongly put together in order to give a solid, lasting construction.

SCHOELKOPF MANUFACTURING COMPANY

Manufacturers of Air-Lec Automatic Door Operators

• MADISON, WIS.

Sliding

Function

Air-Lec Automatic Operators open and close swinging, folding or sliding doors quickly, quietly and smoothly.

How Operated

Air-Lec Automatic Operators are *powered* by compressed air from the regular air line and *controlled* by switches placed conveniently so doors may be instantly opened or closed from any part of the building.

Swinging
and
Folding

Description

Current—For the switches is furnished by a 6-volt dry cell.

Installation—Very easy and simple. All working mechanism is above the doors out of the way. Only 5 in. headroom required. Air-Lec does not interfere at any time with the operation of either door by hand.

Design—Designed on the "over dead center" principle which insures utmost operation economy and smooth opening and closing on a "cushion of air."

Construction—Entirely of bronze, steel and malleable iron, and built to give 24-hour use for many years. Nothing to get out of order.

Uses—Air-Lec is the ideal door operator for public garages, warehouses, bus garages, cold storage plants, factories, fire departments and the better private garages. A fusible link attachment makes it especially adaptable to fire doors in factories.

Service—Our engineers who, for eight years, have solved door problems are prepared to advise architects and engineers concerning the types of doors most suitable; the selection of hardware and any other items pertaining to door operation.

Guarantee—Guaranteed to open and close the doors for which made, with a further guarantee of one year against defective workmanship and material.

AIR-LEC PRICES (*)

For Swinging and Folding Doors (†)					For Sliding Doors (‡)				
Cylinder diameter, in.	Single		Double		Cylinder		Door travel, ft.	Single	Double right and left
	(§) For doors up to, width, ft.		(§) For doors up to, width, ft.		Stroke, in.	Diameter, in.			
2	5	\$67.50	10	\$125.00	10	2½	4 to 7 or 8	\$ 70.00	\$130.00
2½	6	70.00	12	130.00	18	2½	7½ to 12	80.00	150.00
3	8	72.50	16	135.00	24	3	9½ to 16	100.00	190.00
4	10	75.00	20	140.00	32	4	12½ to 20	120.00	230.00

(*) All prices f.o.b. Madison, Wis., and subject to change without notice. Each Air-Lec comes complete, including bolts, 3 switches, 100 ft. double wire, warning sign and instructions.

(†) The gas pipe connecting rods not furnished with sliding Air-Lec due to varying lengths depending on door travel. Pipe can be bought locally for less than transportation alone, due to bulkiness.

(‡) Mounting brackets and arms for folding doors, opening in, \$2.00; pair \$4.00. Mounting brackets and triangles (doors swinging or folding

out) \$5.00; pair \$10.00. Extra double wire per 100 ft. roll \$2.00; extra switches \$0.25; driveway switch, connects through conduit, \$40.00; transformer for alternating current \$5.00; pressure regulator (when air pressure varies 50 lb. or more) \$7.50; fire trip \$5.00.

(§) Cylinders interchangeable. If after trial, due to low air pressure, wind or other resistance to overcome, you find Air-Lec is underpowered, it is only a few moments' work to substitute the next larger diameter cylinder at the exchange price of \$2.50.

We Suggest You Specify as Follows

Air-Lec Door Operators, manufactured by SCHOELKOPF MANUFACTURING COMPANY, Madison, Wis., to be supplied by owner for doors indicated. Carpenter contractor to bolt door operator in position securely and connect to door and make adjustments. Plumbing contractor to run a ½-in. gal-

vanized pipe from air supply, including a settling trap and blow-off near door operators and connect same. Electric contractor to do the wiring to all the operating switches as indicated (100 ft. double annunciator wire and three operating switches regularly furnished with operator).

THE YODER-MORRIS COMPANY

Manufacturers of Y-M Electric Door Operators, "Clearover" Doors, Four-Fold Doors and Hardware for Garages, Service Stations, Warehouses, Industrial Plants, Roundhouses, Airplane Hangars, Fire Stations and Mines

5500 Walworth Avenue
CLEVELAND, OHIO

REPRESENTATIVES AND SERVICE DEPARTMENTS IN ALL PRINCIPAL CITIES

THE Y-M ELECTRIC DOOR OPERATOR

The Y-M Door Operator is an electrically operated device for opening and closing all types and sizes of doors. It is so designed and constructed as to give satisfactory service under the most exacting conditions. The operation is performed smoothly, quickly and positively. The doors always start and come to a stop slowly, thus preventing undue strain on the motor and giving it extraordinary power when required, as well as eliminating the wear and strain on doors and hardware caused by continual slamming.

The worm gear, effecting a 400-to-1 reduction in speed, not only serves as a powerful reduction unit, but at the same time provides a locking device that is entirely automatic and efficient. The doors are securely

locked in either open or closed position.

Y-M Operators do not have a crank arm to bend or break at the shoulder. The power is applied to the motor at the outside rim of the large gear wheels and the crank strain is equalized over the gears as a whole, resulting in great durability and permanence of adjustment.

The Y-M safety feature prevents damage to objects coming in contact with doors while in motion and is positive at all times. Y-M features the absence of clutches and slipping belts which might cause uncertain and undependable operation. Each operator is also equipped with an overload circuit breaker which acts as an additional safeguard for the motor.

Y-M ELECTRIC DOOR OPERATOR CONTROLS

Any number and kind of controls can be installed, so that doors can be opened or closed from any location.

Lock Switch Post Control—Remote control of garage doors without getting out of car is best accomplished, when security is considered, by means of Lock Switch Post placed at side of driveway at some distance from the garage. One-dial post controls serve one or two entrances; two-dial post controls one to four entrances; three-dial post controls one to six entrances, and four-dial post controls one to eight entrances. Post made of cast iron, locks and dials of bronze. Protects premises against robbery.

Cord Pull Control—Attached overhead. A pull of the cord starts operator when doors are either in open or closed position—especially convenient in public garages and factories. As many may be used as desired.

Lock Switch and Box—Same cylinder lock and dial that is used with our cast iron post control. Fitted with $1\frac{1}{2}$ -in. threaded opening at bot-

tom for mounting on gas pipe post and has screw knockouts at back for securing same to wooden post or side of building.

Open, Close and Stop, Push Button Control—Permits starting, stopping and reversing of operator at any point. Used with reversible motors.

Emergency Stop Push Button Control—Permits stopping and starting operator at any point. Furnished with Standard Operator.

Single Button Control—Used where emergency stop button is not required and where two-wire hook-up is used. (For 110 or 220 volts.) Furnished with Junior models.

Y-M Tread Control—Very convenient where operation of doors is required without regard to security of premises. Tread Control either opens or closes doors or both by passing over same with auto wheel—lies flat on driveway. Held in place by anchors in concrete. Durable construction and is weather-proof in all seasons. Patents pending.

Y-M ROLLER BEARING HARDWARE

Designed for all types of service, especially adapted to heavy duty service. Will support heaviest doors and operate with greatest ease, as a result of all load, both thrust and radial, being carried on Timken roller bearings.

Engineers who have seen and used Y-M Roller Bearing Hardware pronounce it the most highly developed they have ever seen. Its construction is the very best and it is built for maximum durability and ease of operation.

Used by Such Representative Concerns as

White Motor Company,
Cleveland, Ohio

Graham-Paige Company,
Detroit, Mich.

Michigan Bell Telephone
Company, Grand Rapids,
Mich.

Cleveland Electric Illumi-
nating Company

Van Sweringen Realty
Co., Cleveland, Ohio, and
other large users.

Y-M "CLEAROVER" DOOR AND ELECTRIC OPERATOR

Y-M "Clearover" Door (patents pending) is built to meet the demand for quality products that will give lasting satisfaction and service over a period of years.

Time-tested principles and new improvements make it a satisfactory door to operate. Architects, engineers and contractors will find in "Clearover" Doors ease of operation and freedom from liability to damage. Great strength and sturdy construction make it distinctly unusual. No expense has been spared to make the complete door, tracks and hardware strong.

Both hardware and tracks are oversize to give more years of useful service. Every feature of "Clearover" Doors is in conformity with the soundest engineering practice. Gauge of track, together with material from which hinges and other parts are fabricated are heavy.

Sections are of white pine in standard design, 1¾ in. thick with heavy panels to match. However, the door can be manufactured of any other wood. Door panels may be constructed of either kalamein, hollow metal or corrugated steel.

Y-M "Clearover" Door goes all the way up leaving a completely clear opening, also stays up until pulled down. It operates easily and smoothly.

Special Mechanical Features—A barrel spring produces a neater and more attractive appearance inside the opening, eliminating any jangling sound of loose springs dropping against the door above. It also makes more substantial installation.

Design of bottom fixture through which traction connection

to spring above is effected has been given special attention. It provides support with an adequate factor of safety.

Two cables used to connect to bottom fixtures are of ample proportion and very flexible. They run upwards from side of door over cable drums on the barrel spring shaft.

The roller itself floats on a fixed pin—a feature of great importance because it provides complete freedom from binding. At the same time, it prevents roller from slipping out of the track as is frequently the case.

Made to Meet Every Need—Y-M "Clearover" Doors are manufactured in four to eight horizontal sections, depending upon the opening heights. Stiles and rails of white pine 1¾ in. thick. Other kinds of wood will be furnished. On all openings over 15 ft. 8 in. wide stiles and rails furnished on standard door are either redwood or fir.

Doors are supported by a vertical tubular track, mounted on continuous angle ½ in. thick. Hinges which connect the sections are fastened with through bolts, no wood screws being used. As the doors open, they pass over the track to assume a completely open position approximately parallel to ceiling. They are counterbalanced through connection with barrel coil springs located above lintel of opening. All door rollers run in vertical radius and on extended horizontal track.

Y-M "Clearover" Operator Designed for Y-M "Clearover" Door

Y-M "Clearover" Door as Seen from Outside

Specifications

Doors

All doors, where indicated on plans, are to be Y-M "Clearover" doors as furnished and installed complete with necessary hardware by THE YODER-MORRIS COMPANY of 5500 Walworth Avenue, Cleveland, Ohio, or its authorized representatives.

Doors shall be manufactured in four to eight horizontal sections, depending on opening heights, stiles and rails being white pine 1¾ in. thick, and panels to be of white pine. (Other kinds of wood will be furnished when specified.)

Doors shall be supported by vertical tubular track, mounted on continuous angle ½ in. thick, through floating ball-bearing rollers 2½ in. in diameter on fixed pins carried in specially designed panel bracket hinges. Hinges between adjacent door sections shall be sufficiently long to grip immediate and outside stiles at a point inside of rails, thus holding rails and stiles firmly together—they shall be attached exclusively with through bolts and no wood screws will be permitted.

Doors shall lap opening 1 in. on each side and at head; meeting rails shall be rabbetted.

In opening, doors shall pass around cast, radius track to assume a completely open position approximately parallel to the ceiling. Counterbalancing shall be effected through connection with barrel coil springs located above lintel of opening. All door rollers shall run in vertical, radius and extended horizontal track.

Electric Operators

For doors specified to be motor operated, there shall be furnished and installed, by door contractor, Y-M "Clearover" electric operators as manufactured by THE YODER-MORRIS COMPANY of 5500 Walworth Avenue, Cleveland, Ohio, complete, furnishing remote control push buttons. Motors furnished shall have electrical characteristics matching power lines specified by the architect. (Single phase, three phase, or direct current motors can be furnished as specified.) Operators shall be equipped with limit switches designed to cut out at or near end of opening or closing travel and coasting or gliding of door, out of motor control, for more than six inches will not be approved. Motors must further be equipped with overload cut-outs designed to prevent burn-outs, and emergency cut-outs, functioning to turn off power if door strikes an obstruction in closing motion. Push buttons shall be three-button type—"open," "close" and emergency "stop"; they shall be momentary contact.

Any type hook-up which requires individual who is operating door to press button for a portion of door travel and then suddenly remove such pressure to prevent door slamming into rear bracing will not be accepted.

The electrical wiring for power and control lines will be performed by the electrical contractor but necessary wiring diagrams are to be furnished by this door contractor.

Construction Details—The Y-M "Clearover" Door

ELECTRIC DOOR OPERATORS

THE YODER-MORRIS COMPANY has for many years been known as one of the foremost designers and builders of electric operators for sliding, swinging, side folding and overhead type doors.

The Y-M "Clearover" Operator used in connection with the Y-M "Clearover" Door provides the ideal installation.

Practically any form of electrical control can be furnished.

Remote control push buttons operate the door from any point desired, inside or outside of a building.

This operator is simple in construction with very few moving parts and easily installed.

It has all the safety features embodied in it that is usual in all Y-M operators.

The above drawing illustrates various methods of installing and some of the constructional details of the Y-M "Clearover" Door.

Type 1—Shows vertical track mounted on wood jambs.

Type 2—Shows vertical track mounted on channel iron door frame.

Type 3—Shows method of mounting door tracks between two parallel walls.

The other illustrations in the drawing show the door in open and closed position and show the corner brackets, hoisting mechanism, counter spring, hand chain mechanism and other details of construction.

On doors of less than 135 sq. ft. the hand chain mechanism is usually not required.

Products

"UNIVERSAL" AUTOMOBILE TURNTABLES for pleasure cars and trucks.

"CANTON" PITLESS AUTOMOBILE TURNTABLES.

For our page on Builders' Accessories, see Manufacturers' Index.

"Universal" Automobile Turntable

Two styles, with and without washrack extension. Mechanically perfect in construction, and easy to turn. Weight of table and load it supports rests on 2-in. (steel) ball bearings, that revolve in a machined, circular track, 54 in. in diameter, reducing friction to a minimum.

Superstructure is of rigid I-beam construction. Top of table made of 1/4-in. steel plates. All parts made of iron and steel; simple in design.

"Universals" may be placed on upper floors as well as on ground floors. Castor wheels at periphery of table are used only to prevent table from tilting. Heavy load does not substantially increase friction.

Advantages—Removable steel plates on top; water drain around outer edge of pit; can not tilt, always perfectly poised; easily turned. Quickly and easily erected from knocked down shipment, by one man; only 12 in. in depth.

Total depth, 12 in.

Top and Sectional View Showing Details of Construction of the "Universal" with Washrack Extension

Total depth, 12 in.

TURNTABLES FOR PLEASURE CARS

Wheelbase	in.	132	144	156
Diameter	ft.	14	15	16
Supporting capacities.....	lb.	8000	8000	8000
Shipping weights.....	lb.	5600	6000	6500

Prices, complete dimensions and specifications of heavy duty turntables, 10-ton capacity, gladly furnished upon request.

Specifications—Blue print, complete specifications and directions for building pit and erecting table furnished with each order. Any careful mechanic can erect.

Catalogue—Send for Catalogue "C-99" and prices.

"Canton" Pitless Automobile Turntable

A circular steel track, 1 1/4 in. high, surrounds a center plate, to which it is attached and held rigid by 8 radial rods. The track is surmounted by 2 steel runways, each 18 in. wide and 13 ft. long. Each runway has 4 ball bearing wheels as shown in accompanying illustration, and the entire weight of the car is borne by these bearings, reducing friction to the minimum. The wheels support the runways 3/4 in. above the track. The runways are held in place by a brace at the middle. A steel king pin, running through this brace and the center plate, forms the pivot of the turntable. The track is 11 ft. in diameter.

Advantages—An automobile turntable is almost as essential for human comfort as the automobile itself. In fact, the automobile is dangerous and destructive when the driver is under the handicap of facing in one direction, while he drives in another.

The "Canton" Pitless turntable requires no elaborate and expensive preparation for installing. Since it needs no pit, it can be set down anywhere on a solid base and it is ready to turn the car. But it may also be installed with the track and bracing embedded in a concrete floor. This is easily done in a new garage when the concrete is soft. It may also be installed in the same way in an old garage by chipping away channels for the track and brace rods.

Since the working parts are not covered by a solid platform, but merely have two runways to receive the car, a minimum of steel is used, and therefore a minimum of weight and a minimum of expense result.

The "Canton" Pitless turntable may be locked so it will not glide or wobble when the car is being driven off or back on the turntable.

Catalogue—Write for Catalogue G which gives further description, details and prices.

"Canton" Pitless Automobile Turntable

ACKMAN WINDOW SAFETY DEVICES, INC.

Standard and Approved Window Cleaner's Safety Devices and Equipment
Made of Bronze and Monel Metal

TELEPHONE
WATKINS 4994

257 West 19th Street, NEW YORK, N. Y.

Architect's Specifications

All windows, which are to be cleaned from the outside, and which are 6 ft. or more above grade, roof, balcony or fire escape, shall be equipped with Ackman Window Cleaner's Devices, as manufactured by the ACKMAN WINDOW SAFETY DEVICES, INC., New York, N. Y.

Install devices: Two (2) to each window, 46 to 51 in. above sill.

Select the type from illustrations to suit the type of frame and jamb, or mullion they are for.

Our devices are listed by Underwriters' Laboratories, Inc.

No. 2

No. 2 For Wood or Kalamein Frames and Mullions
Undersurface of shoulder is made concave, flat or convex to suit the particular type of staff bead or pilaster. Pat., Nov. 23, 1927. Also made with double head for 4-bolt system

AMERICAN WINDOW SAFETY DEVICE CO.

TELEPHONE
WABASH 3842

326 South State Street, CHICAGO, ILL.

American Safety Devices

This company has spared no expense in designing and perfecting American Window Cleaners' Safety Devices which have met with universal approval.

American Safety Devices afford absolute safety, are neat appearing, very easily installed, simple in operation and are made in a sufficient number of designs to meet all conditions of various types of sash and construction. The illustrations show part of our line. Complete catalogue on request.

Tested by Underwriters' Laboratories, Inc.

American Window Safety Devices have been tested and listed as standard by Underwriters' Laboratories, Inc. Quoting from their report: "The foregoing conclusions indicate that these devices are practical to install and maintain, durable and uniform in construction, sufficiently strong, and that the accident hazards incident to their use have been decreased to an acceptable degree."

Full report from the Underwriters will be sent upon request.

Type 3C, Twin, Double Head Anchor

Cast bronze. Used with wooden window frames. Provided with four $\frac{5}{8}$ -in. square heads mounted in pairs $1\frac{1}{4}$ in. apart. Heads are mounted on posts placed at opposite ends of base plate $2\frac{1}{2}$ in. long, 1 in. wide, and provided with a $\frac{3}{8}$ -in. square hole to accommodate the through bolt which is of rolled brass with an upset head, washer, lock washer and nut.

Type 4C, Double Head Anchor

Cast bronze. Used with brick construction. Shank is 9 in. long. Two $\frac{5}{8}$ -in. square heads are mounted $1\frac{1}{2}$ in. apart on an oval shaped body. A lug at one end and notches on the edges of the shank and in addition two lugs mounted on the shank 4 in. from the anchor head to prevent removal from wall.

Type 6F, Double Head Anchor

Cast bronze. Used with wooden window frames. Has two $\frac{5}{8}$ -in. square heads connected by posts to a base plate $2\frac{1}{2} \times 1$ in. Through bolt of $\frac{3}{8}$ -in. rolled brass rod has threaded head which is screwed into threaded hole in center of base plate and the end riveted over. Provided with washer, lock washer and nut. Base has two pointed lugs to prevent turning anchor after mounting.

Type 6S, Double Head Anchor

Cast bronze. Used with wooden window frames. Two $\frac{5}{8}$ -in. square heads mounted perpendicular to plane of base. Base plate is $2\frac{1}{2} \times 1 \times \frac{1}{4}$ in. and has $\frac{3}{8}$ -in. square hole to accommodate an upset head through bolt of rolled brass. Provided with washer, lock washer and suit. Base has two pointed lugs which prevent turning anchor after mounting.

Royal Bronze Expansion Bolt No. 7

For installing in masonry of existing building. Simple to install. Just drill one hole into masonry on each side of window frame with $3\frac{1}{2}$ -in. center, 42 in. above sill in face of reveal in wall. Set in expansion bolt in each hole, turn on head until absolutely tight.

Type No. 1, Safety Belt

A heavy leather waist belt with leather shoulder and chest straps each provided with adjusting buckles. Two cast bronze rope guides at back are equipped with rollers to eliminate wear on safety rope. Equipped with 4-ply, $\frac{1}{2}$ -in. diameter manila rope provided with adjusting device.

Palmer House, Chicago, Ill.

HOLABIRD & ROCHE, Architects
THOMPSON-STARRET Co.,
Contractors

Double Head Belt Terminal

Cast bronze, $6\frac{1}{2}$ in. long. Slots are so located that the load is carried by both the upper and lower heads of the anchor. A flat phosphor bronze spring must be raised by the window cleaner to remove the terminal.

Double Head Non-removable Bronze Anchor No. 8A

For attaching to wood mullions or frames, with anchorage of 3-in. rod, with 2 harpoons to prevent removal, after being once set. Cast bronze.

Type N4, Twin Double Head Anchor

Cast bronze. Used with hollow metal window frames. Has four $\frac{5}{8}$ -in. square heads mounted in pairs $1\frac{1}{4}$ in. apart. Heads are mounted on posts placed at opposite ends of base plate $2\frac{3}{4}$ in. long, $\frac{3}{4}$ in. wide. Mounted by two $\frac{7}{8}$ -in. No. 18 round head brass screws with nuts.

Absolute Safety for Window Cleaners—Also for Those on the Sidewalk

Absolute safety and practicability are essential features embodied in "Whitner" window cleaners' safety devices, which are made of the best materials obtainable.

They are offered as high quality products that will outlast the building in which they are installed.

These devices are approved by the Labor Departments of New York, New Jersey and Pennsylvania Industrial Commissions.

Special devices made to meet architects' requirements.

Blue prints giving installation details will be sent on request.

ROYAL WINDOW SAFETY DEVICE COMPANY

Safety Devices for Window Cleaners
673 West Madison Street, CHICAGO, ILL.

Royal Window Safety Devices

Royal window safety devices for use on the wood mullions, the steel or hollow metal frames or in the masonry wall. These devices have been designed by men who have studied this problem from the safety of the cleaner and the cost of the building owner. Every device bearing the name Royal is of the best metal obtainable—strong and durable.

The belt for the cleaner is of high grade live leather—adjustable, easy slipping guides in the back to allow freedom of movement, terminal of bronze and slipproof once on the anchor heads—and of a strength to support the weight of the heaviest man.

Listed by Underwriters' Laboratories, Inc.

• SPECIFICATIONS •

WINDOW CLEANERS' HARDWARE SHALL BE OF THE TWO ROUND HEAD TYPE AS MANUFACTURED BY THE AMERICAN WINDOW SAFETY DEVICE CO., OR EQUAL. ANCHORS SHALL BE SET 42" TO 45" ABOVE WINDOW SILL.

GENERAL (OR CARPENTER, OR MASON) CONTRACTOR SHALL FURNISH ALL THE ANCHORS FOR THE ENTIRE BUILDING AND SHALL DISTRIBUTE SAME AMONG CONTRACTORS INTO WHOSE WORK THEY ARE TO BE INCORPORATED.

EACH CONTRACTOR AFFECTED BY THESE SPECIFICATIONS SHALL INSTALL IN HIS WORK, ALL ANCHORS FURNISHED TO HIM BY THE GENERAL (OR CARPENTER OR MASON) CONTRACTOR.

WHITNER 2-ROPE SAFETY COMPANY

TELEPHONE
HARRISON 6337

638 South Clark Street, CHICAGO, ILL.

Originator and Manufacturer of 4-Head System Devices

Whitner-Chicago safety devices for window washers in specifications mean real safety. Our record of thirty-nine years without a casualty is ample proof. This record warrants recommending the 4-head system, assuring doubled safety through two heads on either side.

Description of Fixtures—In addition to using only the highest quality of virgin bronze, the fixtures are designed to eliminate breaking points. The heads are built close to the body on every fixture but still allow plenty of room for easy operation of the terminal. A "wrestler's" neck is used on Whitner-Chicago fixtures, being exceptionally thick. This eliminates snapping of heads. Right angle construction in places where a strain will exist is eliminated. Additional metal has been used to round out the sharp angles. The rounding connection where the neck is built upon the body will be noticed in particular.

Ask for complete catalogue.

Specifications—Furnish and install one Whitner-Chicago No. anchor on each side of window with anchor heads placed in vertical position placed at a height of 45 to 50 in. above the sill. Also furnish (quantity) Whitner-Chicago No. belts.

ANDERSEN FOUNDRY COMPANY

SASH PULLEY DIVISION of the ANDERSEN FRAME CORPORATION

Manufacturers of Andersen Noiseless Sash Pulleys

BAYPORT, MINN.

Product

NOISELESS SASH PULLEYS.

Noiseless Andersen Sash Pulleys

The exclusive features of the Andersen Noiseless Sash Pulley include the patented noiseless, wearproof axle bearing—an exclusive feature of the pulleys with which all Andersen Double Hung Window Frames are fitted; a specially designed housing to prevent the cord from slipping off the wheel, and reduce air leakage around the cord; and a tongue on the face of the pulley to reduce air leakage through the groove under the wheel.

Unlimited Guarantee

Every Andersen Noiseless Sash Pulley is guaranteed to be noiseless in operation and to function perfectly for an unlimited period.

Laboratory Tests

Tests made at the University of Minnesota of various makes of pulleys resulted as follows:

After tests equivalent to 186 years of ordinary wear, this Andersen pulley was in excellent condition. The engineer in charge stated that "at the end of the test, the bearing appeared to be as good as new" and "the pulley ran very quietly throughout." Of six other types of pulleys in this test, the most enduring operated perfectly less than a year and stopped at about 33 years. Copies of this test will be gladly furnished on request.

Absolutely Noiseless

The axle bushing of the Andersen Noiseless Sash Pulley is of hard white maple permanently saturated with a non-drying lubricant. This lubricant prevents swelling and shrinking with variations of temperature or humidity and it will not ooze or evaporate under 125° F.

Caldwell Vertical Door Holders

Of strongest construction; made in all finishes; have no screw ears.

A bracket affixes the holder immovably to the door, and gives strength at the base of holder where it is most required. Our *special large vertical door holder* with $4\frac{1}{4}$ -in. drop is recommended for use on heavy outside doors, particularly upon vestibule doors, which open over incline floors, such as theaters, moving picture entrances, etc. Large size made in cast brass and bronze metal only.

Pressers are made of cold rolled rods, $\frac{5}{8}$ -in. diam. The rubbers are the *original cup shape*, reinforced with hard leather gaskets, which prevent the rubbers from being cut and torn.

Manufacturers of SASH PULLEYS; ANTIFRICTION VERTICAL PIVOT LIFTS; ANTIFRICTION DRAWER SLIDES.

For Door Hangers and Bar Locks, see page of Grant Elevator Equipment Corp. in Manufacturers' Index.

Selling Agents for:

"Gem" ball bearing door hangers.

Details

Full size details of all our specialties will be sent on request.

"Grant" Overhead Pulleys

On account of additional pocket room gained by use of "Grant" pulleys, iron instead of lead weights can be used for heaviest plate glass windows, thus materially reducing cost. Frames are cut for "Grant" pulleys by regular pulley machine.

"Grant" overhead pulleys are also made for triple, quadruple and quintuple windows.

"Grant" Antifriction Vertical Pivot Lifts

The "Grant" antifriction pivot lift, when applied to sash pivoted top and bottom, can be quickly and easily opened for ventilation.

"Turner" (Patent) Antifriction Drawer Slide

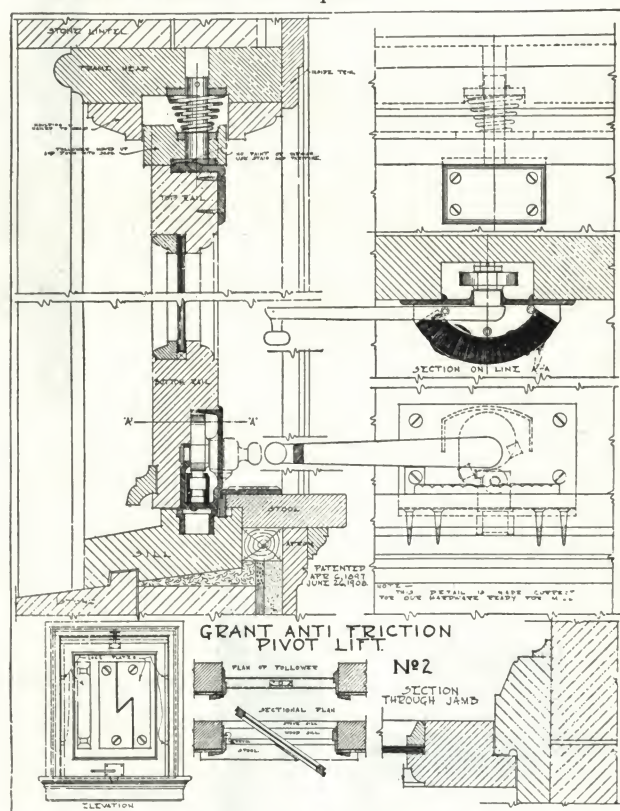

The "Turner" antifriction drawer slide and support are noiseless. When fitted with the "Turner" attachment a drawer cannot fall from the case when pulled out suddenly; nor can it sag, if heavily loaded, when opened to its limit.

"Gem" Antifriction Drawer Slides

We now manufacture and sell the "Gem" antifriction drawer slides and supports that are made entirely of steel with the exception of the wheels which are fibre and are steel bushed. These slides take a space

of only $\frac{1}{2}$ in. on the side of the drawer and the operation of same is exactly like the "Turner."

Details furnished on request.

Grant Overhead Pulley

PULLMAN MFG. COMPANY, INC.

Manufacturers of Unit Sash Balances

ROCHESTER, N. Y.

Products

PULLMAN UNIT SASH BALANCES for wood, hollow metal, steel or kalamein double hung sash.

Also Special Balances: Tandem, for extra heavy windows; Cabinet, for show and wall cases; Pressed brass, for marine work; Midget Balance, instantly adaptable to the pulley mortises and sash grooving in standard stock frames and sash.

Pullman Sash Balances More Economical Than Weights and Cords

Expensive box frames, weights and cords are eliminated. Pockets for reaching weights are unnecessary—a big saving. Sash are grooved in one operation instead of two. Less lumber and labor required throughout. In some sections mill savings have been as high as \$2.00 per frame. In any location, however, this saving should be at least 95c.

Pullman Balances are installed at the rate of 10 to 15 minutes per window as compared with 30 to 45 minutes for weights and cords, shown by time tests on actual jobs. Experienced carpenters can install in 6 to 10 minutes.

Guaranteed for the life of the building against imperfect workmanship or material. Purchasers are fully protected. They are not penalized for breakage due to inexperienced workmen. Durable, the spring remains uniform in tension and does not require oiling. Installations of 40 years ago are working satisfactorily. Tight construction. No leakage of air as with pulley opening. Saves fuel bills.

Substantial savings are effected in freight and cartage and in handling to and on the job. Labor costs reduced to a minimum. Tonnage reduced 90%.

Unit Sash Balances
TRADE-MARK

How to Order

Specify exact weight by scales of each individual sash. The mill usually so marks the sash. Upper and lower sash often vary. Sash of the same dimensions likewise differ in weight. Therefore, never give weight of entire window. Be sure sufficient space is left for Balances. Use overhead type if no room in side jamb. Note the regular run of tape on following page for each size of Pullman Balance. If additional run of tape (i. e., travel of sash within a given opening) or extra length is required in order to locate balances higher up or further away from the sash than usually, or for unusually long, narrow sash, please consult us before ordering. Always send for dummy Balances for mortising purposes, supplied free of charge.

Illustrated Catalogue

Complete illustrated catalogue, "Standard Specifications and Architectural Details," may be had upon request.

Ten tons of weight replaced by one ton and ten men's work done by one man where Pullman Sash Balances are installed

Side Type, Fitted in Jamb

An ordinary nail inserted in Balance holds spring while tape is being attached to tape hook on the sash

Overhead Type, Fitted in Head of Frame

Finishes

All units have special rustproof finish. No additional protective coating is necessary. Finishes last indefinitely.

Brass, nickel, bronze, bower barff, verd antique or other architectural finishes can be readily obtained at a nominal additional cost. Special finishes should be clearly specified and sample of similarly finished hardware submitted if possible.

Types and Sizes

There are two types of Balances. Side pattern for standard use on jamb and Overhead or Top pattern for narrow mullions (see drawings on following page). Each pattern is made in three sizes, Units A, L and M, for the various weights of sash. Standard tape lengths are adequate for usual conditions. The longer tape of next size unit handles unusually long, narrow sash, i. e., use Unit L instead of A, or Unit M instead of L. (See table on following page.)

Note: Two Pullman Balances are required for each sash.

Principle of Construction

The Pullman Balance consists of a pressed steel casing enclosing a rustproof steel tape, wound on a revolving drum. Inside this drum is a spring of the finest clock steel, uniform in tension and temper.

Can be instantly installed or removed without disturbing stops, sash or frame by means of the loop in the end of the tape, which is hooked into the tape hook on the sash.

Guaranteed for the Life of the Building

When each sash is accurately weighed and our instructions are followed for putting them in, we guarantee our standard Balances to carry the sash perfectly during the life of the building, and we will repair or replace at our factory, free of charge, any broken or imperfect Balances.

Specifications

Insert the following clause in the Millwork section of the specifications:

All double hung windows are to be operated by Unit Sash Balances as manufactured by the PULLMAN MFG. COMPANY, INC., Rochester, N. Y. The stiles of sash shall be grooved at the mill in accordance with the PULLMAN MFG. COMPANY'S details. All boxings and weight pockets for window weights shall be eliminated and frames provided as detailed.

Insert the following clause in the finish Carpentry specifications:

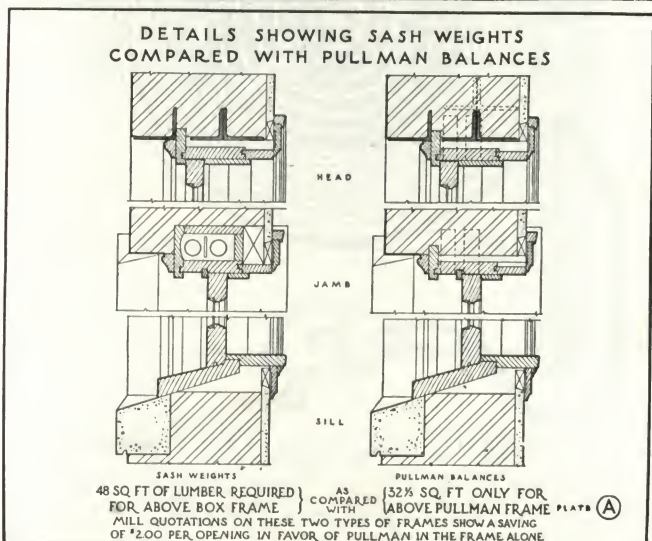

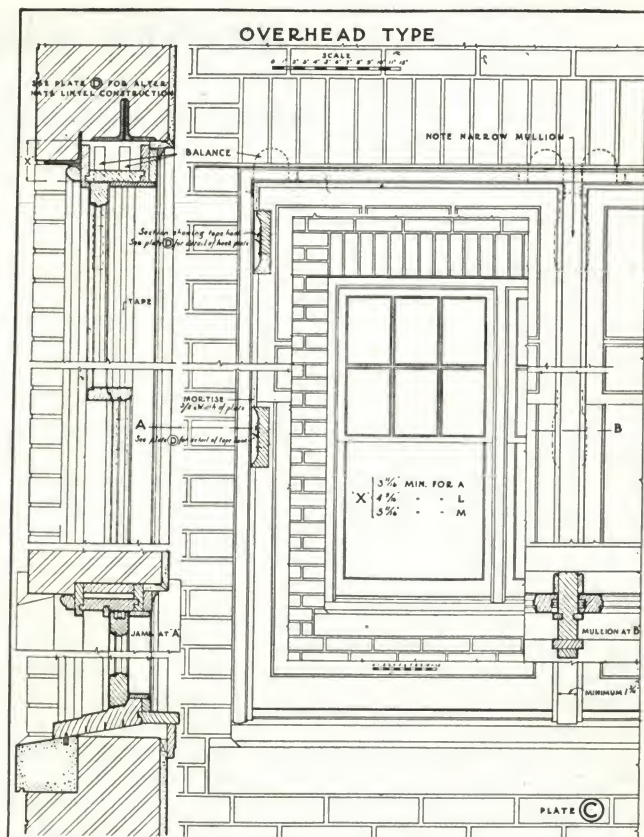

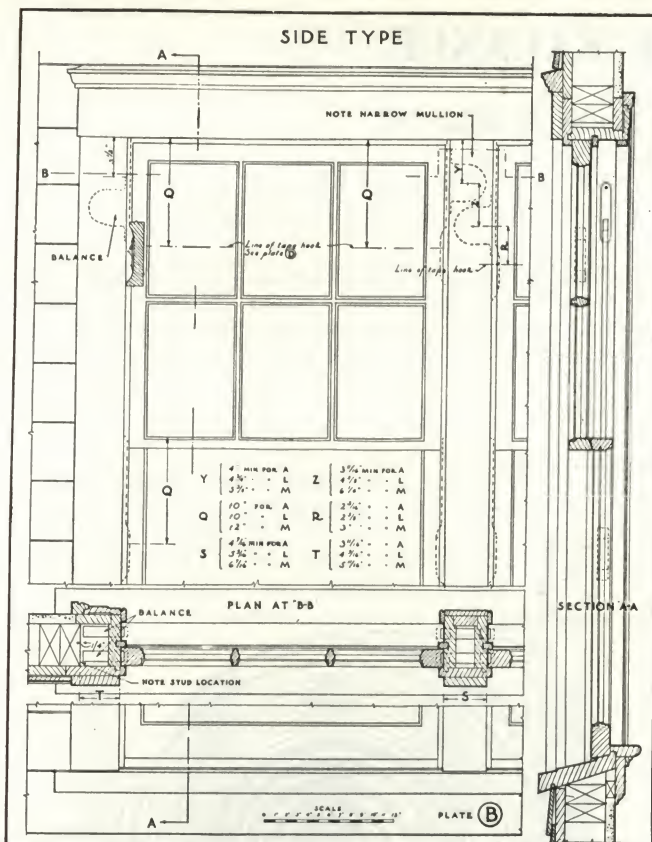

This contractor shall provide and install Unit Sash Balances as manufactured by the PULLMAN MFG. COMPANY, INC., Rochester, N. Y., on all double hung windows throughout.

The manufacturer's standard metal housing shall be provided by this contractor to the mason where frames are surrounded by poured concrete.

All Balances for windows throughout (state location) shall be Side Type and all Balances for windows throughout (state location) shall be Overhead Type.

All sash shall be accurately weighed by scales as soon as completed, and the correct size and tension of Balances shall be provided for the sash of varying weights as required by the manufacturer's guarantee so as to balance the sash perfectly at all points.

All face plates shall have manufacturer's standard finish, except those for windows (state location), which shall be (state finish required).

GRAVES SASH BALANCE

MANUFACTURED BY
FRANK GRAVES SASH, DOOR & MILL CO.
 INCORPORATED

2000 Pasadena Avenue, LOS ANGELES, CALIF.

For Sale by Leading Hardware and Lumber Dealers or Write Us Direct for Information

Graves Sash Balance

The Graves Sash Balance is a device which controls the sash in double hung windows and eliminates box frames, rattling weights, and chatter caused by loose fitting. It permits narrow mullions, narrow casing or plaster return.

The Graves Balance assures smooth operation and reduces the cost of installation. It has the *wire sash cable* consisting of seven twisted strands, each composed of seven strong wires. Can be used on windows equipped with any standard weatherstrip.

Installation

The Graves Sash Balance is installed in the pulley stile 1 in. above center of window opening. The bore required in the pulley stile is $1 \times 4\frac{1}{4}$ in. for all sizes of Graves Balance. A metal template is furnished for this or the frames may be bored at the mill.

Graves Single Installation—System Patent No. 1760226—Where each window is not larger than 3 ft. 6 in. x 6 ft. only one Graves Balance is used for each sash and is placed on the left side. On the right side of the sash at the top is placed the spring steel glide which absorbs any looseness and assures smooth operation.

Dimensions of Graves Balance and Bore

Details of Installation for Graves Sash Balance

Double Installation—For windows of larger size, up to 40 lb. per sash, two Graves Balances are used, one on each side of sash, and the glide is omitted.

For sash weighing more than 40 lb. use tandem installation.

Details on request.

Specifications

The Graves Balance offers the following features:

- (1) Spring—blue steel clock spring.
- (2) Cable—galvanized and specially oil treated.
- (3) Housing—cold rolled steel.
- (4) Finish—udelyte.
- (5) Working parts free from dirt and rust.

IN CANADA: DOMINION CHAIN COMPANY, LIMITED, NIAGARA FALLS, ONT.

DISTRICT SALES OFFICES
NEW YORK, N. Y. PITTSBURGH, PA. BOSTON, MASS. CHICAGO, ILL. PHILADELPHIA, PA. SAN FRANCISCO, CAL.

American Sash Chain

Ease of Operation—

American Sash Chain links are flat, giving a strap-like action, which is strong and flexible. Will run freely and noiselessly over the pulley, and will not kink.

Made of Copper-Bearing Steel—

Copper-bearing steel, highly rust-resistant, is used exclusively for the manufacture of American Sash Chain, assuring life as long as the sash.

American Bronze Sash Chain

Made from our own special mixture of hard bronze, adopted only after exhaustive tests proved it was the best alloy possible to produce for the purpose. It is positively non-corrosive.

Standard Size Fixtures for American Sash Chain

American Sash Chain Fixtures are quickly and easily adjusted. Made in copper finish only.

Coil springs provide a strong grip which cannot work loose. They are used in either one or two-hole sash. Furnished in three sizes: for $\frac{3}{4}$ -in., $\frac{7}{8}$ -in., and 1-in. bores.

No. 178 sash weight hooks eliminate cumbersome knots. They are easy to install and cannot loosen.

The type of fixture shown at right consists of four weight hooks, four sash rings, and four "U" pieces. No. 60 fixture should be used for No. 60 sash chain. No. 80 fixture is satisfactory for all the other sizes.

Coil Spring

No. 178 Hook

No. 60 No. 80 No. 100 No. 130 No. 250
No. 60 for double-hung sash not weighing over 100 lbs.
No. 80 for double-hung sash not weighing over 150 lbs.
No. 100 for double-hung sash not weighing over 250 lbs.
No. 130 for double-hung sash not weighing over 300 lbs.
No. 250 for double-hung sash not weighing over 400 lbs.

American Sash Chain Finishes

American Sash Chain is regularly furnished in the following finishes—coppered, hot galvanized, S.R.P., Hercules. These finishes are applied to the chain by special equipment which coats each link thoroughly and evenly.

The S.R.P. finish is a zinc coating having the appearance of sherardize. Hercules finished chain is first hot galvanized, then coppered, giving the appearance of bronze. It is an excellent substitute for bronze chain, at a considerable saving in price.

Packing

American Sash Chain is furnished on our own substantial steel reels, 500 feet to reel, two reels to case.

American Sash Chain

Acco No. 8 Sash Chain for Residences and Apartments

Operates Perfectly Over Any Cord Pulley—

Carpenters prefer Acco No. 8 Sash Chain because it is easier to install.

The same type of coil spring and weight hook is used as for American Sash Chain.

Home owners and prospective home buyers quickly recognize the advantages of Acco Sash Chain—it will not rot, nor will it cut on sharp pulley edges.

Acco No. 8 Sash Chain, like American

Sash Chain, is made of rust-resisting copper-bearing steel.

Acco No. 8 Finishes—

Furnished in three finishes—coppered, S.R.P., and hot galvanized.

Packing—

Acco No. 8 Sash Chain is packed in bags of 100 feet, with necessary attachments, enough for seven average double-hung windows.

Acco No. 8 Sash Chain can also be purchased in hardware stores in cartons, each carton containing sufficient chain with attachments for one double-hung window.

Hodell Sash Chain

Description—A revolutionary improvement in sash chain manufacture has produced a unique, patented type. Elimination of 60% waste in its construction brings cost to a level where it can be economically specified for every type of building.

In tensile strength tests, *Hodell* sash chain will be found to be from 10% to 15% stronger than the old style, stamped link pattern. It also possesses absolute uniformity of every link, freedom from improperly formed blanks common to stamped chain, smooth polished surfaces with all rounded edges.

Hodell sash chain was developed after an insistent demand by architects for a sash suspension that would eliminate those costly replacements of sash cord or ordinary flat link chain.

Hodell sash chain is made from a narrow ribbon of cold rolled polished metal, woven by automatic ma-

Enlarged Link, Hodell Sash Chain

chinery to the type of link illustrated above. The saving in material over the old method of blanking out links is utilized to purchase a higher grade stock.

Hodell sash chain is identical in length and outside diameter with ordinary sash chain. Fits standard pulleys and runs more smoothly than any other type. Wears twice as long because of double metal at eye.

Types of Hodell Sash Chain

Approval—*Hodell* sash chain is approved by the Underwriters' Laboratories, Inc.

Fittings—Standard type of fittings are supplied. Furnished regularly in two sizes, one for light and medium, the other for heavy and extra heavy sash.

Grades and Finishes—Bronze—*Hodell* sash chain is supplied in bronze and steel grades, the bronze grade including phosphor bronze and red bronze. Both of these grades are formed from a bronze stock of special analysis.

Steel—The steel grades are hot galvanized by the latest process, the best rust preventative known. The bright galvanized is a special and improved method of electroplating, a heavy zinc coating being applied, resulting in a silver bright finish.

Further Information and Co-operative Service

Send for specially designed folder adapted to standard classification of American Institute of Architects. Attractive sample display cards showing all sizes and grades and convenient data gladly sent to architects and builders.

THE CHAIN PRODUCTS COMPANY are also manufacturers of a complete line of Weldless Chain, including Bulldog, Samson, Cleveland, Noweld and Cepeco; Steel and Brass Wire Chains in 114 sizes and 8 finishes; also a full line of General Purpose Chains, S Hooks, Screw Hooks and special shapes in all varieties of flat and round wire.

If you have any chain problems, our Experimental Department is at your service.

Packing—*Hodell* sash chain is packed on 500-ft. reels with one or two reels to a case.

Hodell Sash Chain Is Shipped on All-steel Reels

SAMSON CORDAGE WORKS

89 Broad Street
BOSTON, MASS.

Products

Manufacturers of BRAIDED COTTON CORD in all sizes and colors for all purposes, including SAMSON SPOT CORD, SAMSON WIRE CENTER CORD and other SASH CORDS.

Also manufacturers of Clothes Line, Ventilator Cord, Curtain and Shade Cord, Awning Line, Masons' Line, Dumbwaiter Rope, Arc Lamp and Trolley Cord, Signal Cord, Cotton Twine, etc.

Samson Cord

All cord bearing the trade-mark of Samson and the Lion is made of extra quality stock; is carefully inspected, and is guaranteed free from the rough braiding and finishing which destroy common cords so quickly.

The SAMSON CORDAGE WORKS manufactures several grades of sash cord, but the lower grades, made for competing trade in cheap work, do not bear the Samson trade-mark. They do not fill specifications for Samson cord, which is much more economical in the end.

TRADE-MARK

Samson Spot Sash Cord

Samson Spot Cord is made in one quality only, the best sash cord we can produce after forty-six years' experience. The colored spots are our trade-mark, used only with this extra quality. They serve as a means of identification after the label is removed.

Spot Cord will wear many times longer than metal devices or than the common cord, so often found on the market, made of inferior yarn roughly braided and poorly finished, causing early destruction by abrasion on the pulley.

Specifications—Architects' specifications should read:

"Windows to be hung with Samson Spot Cord; size of cord and size of pulleys to agree with manufacturer's list." (See lower left-hand corner of this page.)

Sample Cards—Sample cards, showing proper sizes for use with different weights and pulleys, will be gladly sent to architects and builders.

Samson Wire Center Sash Cord

Recommended for use in hanging heavy windows or where for any reason a metallic device is desired.

The cover is made of the same extra quality cotton yarn as used in Samson Spot Cord, with special steel wire center, manufactured under specifications for running over pulleys and of entirely different quality from ordinary wire.

The weight of the window is borne chiefly by the wire center, the cotton cover merely acting as a cushion, thus avoiding contact of metal with metal which causes wear and makes an unpleasant noise.

It is carried in mahogany color in two sizes: Nos. 8 and 10.

No. 8 is suitable for weights up to 30 lbs. if used with pulleys not less than 2 in. in diameter, or for weights up to 50 lbs. with pulleys not less than 2½ in. in diameter.

No. 10 for weights up to 75 lbs. if used with pulleys not less than 2½ in. in diameter, or for weights up to 100 lbs. with pulleys not less than 3 in. in diameter.

Samson Wire Center Sash Cord

Special Cords

Cords made to order for any purpose, in special braid, finish or color.

Territory

Samson Spot Cord and this company's other goods are sold all over the world, and are carried by dealers in all parts of the United States.

Catalogues

Send for catalogues and sample cards.

Samson Spot Sash Cord

The number indicates the diameter in 32nds of an inch. Usually put up in 100 ft. hanks, 1 dozen hanks in a package.

Size No. 6. Diam. $\frac{3}{16}$ in.

About 18 lbs. per doz.; about 66 ft. per lb.
Suitable for weights of less than 10 lbs.
Minimum diam. of pulley allowable 1½ in.

Size No. 7. Diam. $\frac{7}{32}$ in.

About 22 lbs. per doz.; about 55 ft. per lb.
Suitable for weights from 10 to 15 lbs.
Minimum diam. of pulley allowable 1¾ in.

Size No. 8. Diam. $\frac{1}{4}$ in.

About 27 lbs. per doz.; about 44 ft. per lb.
Suitable for weights from 15 to 25 lbs.
Minimum diam. of pulley allowable 2 in.

Size No. 9. Diam. $\frac{9}{32}$ in.

About 33 lbs. per doz.; about 36 ft. per lb.
Suitable for weights from 25 to 35 lbs.
Minimum diam. of pulley allowable 2¼ in.

Size No. 10. Diam. $\frac{5}{16}$ in.

About 44 lbs. per doz.; about 27 ft. per lb.
Suitable for weights from 35 to 45 lbs.
Minimum diam. of pulley allowable 2½ in.

Size No. 12. Diam. $\frac{3}{8}$ in.

About 60 lbs. per doz.; about 20 ft. per lb.
Suitable for weights from 45 to 60 lbs.
Minimum diam. of pulley allowable 3 in.

SILVER LAKE COMPANY

Manufacturers of Sash, Bell and Signal Cord

Products

Manufacturers of "SILVER LAKE" SOLID BRAIDED WINDOW SASH CORD.

Also Railroad Bell, Trolley, Signal, Curtain and Shade Cord; Arc Lamp, Dumbwaiter and Transmission Rope; Mason's Lines and Clothes Lines, and all kinds of Solid Braided Cordage.

Description of Solid Braided Cordage

We are the pioneer manufacturers of solid braided cordage. "Silver Lake" cords have been used for the best work since 1868 and have become known as the standard. "Silver Lake" solid braided sash cord is made of the best quality of selected cotton yarn; twice doubled and twisted, and then braided on solid braiding machines of our own design.

Advantages—"Silver Lake" cord costs less per pound than linen and other fine fibers, and its weight is so much less that it costs less per foot than cords that are cheaper per pound. Cotton is the only fiber that will stand constant bending over a pulley; consequently a cotton cord is more durable than one made of linen or hemp. It varies in diameter by thirty-seconds of an inch, and is adapted to all styles and sizes of weights and pulleys. Our process of finishing takes up all the stretch, so that "Silver Lake" cords do not lengthen as they wear, but maintain the weight at its original height.

Ordinary twisted cords kink badly in unwinding from the hank, and a great deal of time is required to straighten them out. "Silver Lake" braided cord comes out smoothly and makes it possible to hang more sash in a given time than when ordinary cords are used. "Silver Lake" cord is smooth in finish and can not work in between pulley wheel and case, a fact that pre-

cludes all possibility of broken sash cords. Our shade cords are extremely handsome in appearance and do not fray and break.

Guarantee—Furthermore, we issue a certificate of guarantee protecting every architect who specifies "Silver Lake" sash cord against the breakage of same for a period of 20 years after installation.

Tests—Tests as made by the United States Government, Bureau of Standards, show that "Silver Lake" outwears many times chains and cheap cords. The hard braid and smooth finish also make it more fire resisting than chains.

Special Cords

All colors of wire center cord and a great variety of other braided cords for special purposes manufactured to order. Estimates promptly furnished on any sample sent to us. Anything in the way of a solid braided cord, in any color or design, may be had.

Sizes, Weights, etc.

The table gives the sizes and weights of cords, and the weight which each size will safely carry.

Territory

Our cords are in use the world over, and are carried by dealers throughout the United States.

Orders of any size promptly filled.

Trade-marks

All hanks of genuine "Silver Lake" cord are bound with our label, bearing our trade-mark. As an additional protection and means of identification, every foot of cord is stamped with our name. Cord not so marked is not genuine "Silver Lake."

AUSTRAL WINDOW CO.

Architects Building, 101 Park Avenue
NEW YORK, N. Y.

Products

Manufacturers of AUSTRAL WINDOW HARDWARE for Austral Balanced Windows.

Applicability of Austral Window Hardware

Austral hardware is applicable to Austral wood, kalamein, rolled steel and hollow metal windows for public buildings, offices, schools, hospitals, libraries, etc.

The one-plane solid steel window equipped with Austral balance is designed for use in high grade buildings. See pages of International Casement Co., Inc.

Types of Austral Window Hardware

The types of Austral hardware supplied by this company and applied to Austral wood or metal windows are as follows:

For Application to Austral Wood Windows—

Type 2BN Hardware—A set consists of 2 balance arms, 4 sash guide pins, 2 parting strip bolts and screws for attaching. Standard finish, electrogalvanized.

Finish hardware consists of automatic solid bronze sash fast No. 200 (or malleable iron bronze plated sash fast No. 7200½) and 1 pair of solid bronze offset

pulls No. 300 (or malleable iron bronze plated pulls No. 7300½). Shade pulleys furnished when specified.

Type 2CN Hardware—A set consists of 2 balance arms, 2 sash guide pins, 2 spring sash guide pins, 2 parting strip bolts and screws for applying. Standard finish, electrogalvanized.

Finish hardware consists of 1 pair of solid bronze turnbuckles No. 400. Shade pulleys furnished when specified.

Advantages of Austral Windows

- (1) Ventilation without draft.
- (2) Absolute control of light.
- (3) Reversible for cleaning and reglazing.
- (4) Exterior awnings eliminated.
- (5) Plank frames only are used, increasing light area.
- (6) Austral mullions are half the width of those required for double hung windows.
- (7) Windows adjusted by slight pull on lower sash.
- (8) Extreme simplicity in construction and operation.

For Estimates

When ordering or writing for estimates, furnish width and height of masonry openings, thickness of sash, and information regarding finish of locks and pulls.

Catalogues, details and card models sent upon request.

Vertical Sections Through Austral Windows, Showing Sash in Various Positions

REED ROLLER BIT COMPANY

Manufacturers of Awco Window Hardware

HOUSTON, TEXAS

Product

SPECIAL HARDWARE for Double Hung Windows—Reversible Type. Made of solid brass and can be furnished in any finish.

General Description

Awco Window Hardware converts the ordinary double hung window into a window with many needed advantages of ventilation and inside cleaning. The development of this appliance grew out of the general demand of the building public for a simple appliance which would add all the different features of ventilation and inside cleaning, without sacrificing the fundamental simplicity of the standard double hung window.

Awco Window Hardware is applied to the standard double hung window sash and frame. The illustrations below show the various positions in which the sash can be placed after applying *Awco Hardware*.

Both sash slide vertically in the ordinary manner, as shown in Fig. 1. The lower sash can be tilted inward, as shown in Fig. 2, to give ventilation at the meeting rails and at the same time keep out rain and direct drafts. While the lower sash is in this position the top sash can either remain closed or can be pulled down to afford added ventilation at the top of the window.

Both sash can be tilted inward to position as shown in Fig. 3, to allow outside of sash to be cleaned from inside of the building. This position of sash also affords wonderful ventilation while deflecting the direct drafts.

Advantages

Awco Hardware is applied to the standard double hung window sash and frame. No special millwork necessary.

Windows equipped with *Awco Hardware* can be weatherstripped as cheaply and as efficiently as the ordinary window.

Same size hardware used for any size or thickness of sash.

Nothing to wear out or get out of order.

Outside of sash can be cleaned from inside of building.

Ideal ventilation. Maximum ventilation is afforded during rainy weather, full deflected ventilation at will.

Both sash slide up and down exactly like an ordinary window.

No interference with draperies or outside screens. No need to open or remove outside screens to clean windows.

Price within reach of every one.

Application

Hardware easily applied to double hung windows of any size or thickness. Instructions in each box of hardware.

Estimates

Prices and complete information sent upon request.

GATES REVERSIBLE WINDOW CO.

Manufacturers of Patent Window Devices

PITTSBURGH, PA.

SALES AGENCIES IN PRINCIPAL CITIES

Products

GATES REVERSIBLE WINDOW FIXTURES for plank frame and double hung windows; GATES CASEMENT WINDOW FIXTURES; GATES VERTICAL PIVOT WINDOW FIXTURES.

Gates Reversible Window Fixtures

Where Used—For Plank Frame Windows—Suitable for use in schoolhouses, public buildings and factories and where 100% ventilation is desired.

For Double Hung Windows—Suitable for use in schoolhouses, office buildings, hotels, hospitals and residences.

Advantages—Windows equipped with Gates reversible fixtures, either double hung or plank frame, offer an enormous saving in cleaning, as both sides can be cleaned from inside the building. This not only saves time and expense, but eliminates the undesirable and dangerous feature of outside cleaning from the window sill with safety life belts.

Gates reversible fixtures in either double hung or plank windows, require no special construction of frame or sash. The sash are merely to be made 1½ in. narrower than the inside width of the frame.

Plank frame windows in schoolhouses and factories have the added economical advantages of the elimination of space required for box frames, especially mullion windows. Also the cost of weights, cords and pulleys is eliminated.

Construction—Gates reversible fixtures consist of the following: A specially designed wood strip, of well seasoned hard maple, meshed into the vertical sides of sash in lengths equal to the sash. Between this strip and the frame attached to the jamb is a continuous metal strip of spring brass, which not only holds the maple strip firmly against the sash, preventing rattling, but also serves as a complete weatherstripping at the jamb. This metal strip is included in either plank or box frame windows as a part of our standard equipment.

When specified we furnish and install a weatherstripping at head, sill and meeting rail for double hung windows only, giving a complete airtight job at little added expense. This weatherstripping should be specified extra. Sash is hung on specially designed Gates pivot, securely attached to the sash, through the maple strip to jamb or frame of window, distributing the weight of sash directly to the jamb. Pivot controls sash at any degree of opening and holds it fast, whether open or closed.

Hardware—We will furnish and install finished window hardware (such as sash locks, lifts, pulls and poles) if desired, although regular hardware may be used.

Installation—A corps of expert mechanics is maintained to install Gates reversible fixtures anywhere in the

In Plank Frame Window

Gates Reversible Fixtures

United States. This includes fittings and hanging sash as well as applying reversible fixtures. This fixes the responsibility for successful operation, insuring a perfect, satisfactory installation.

Gates Casement Window Fixtures

A perfect storm and weatherproof window sill for open-in casements. No special construction required for head, sill or jambs. Standard requirements include: Gates closure bar or sill and Gates bronze weatherstripping at head, sides and bottom. Finished hardware furnished and installed in addition, if desired.

Gates Vertical Pivot Window Fixtures

A perfect storm and weatherproof window sill for vertical pivot windows. No special construction required for head or jambs. Standard requirements include: Gates closure bar with Gates reversible fixture at sill and follower strip at head. Gates reversible fixture at sill allows sash to open either right or left, holding it securely at different angles when open. Bronze weatherstripping furnished and installed in addition, if desired.

Builders Hardware

2511-2525 Hart Avenue

DETROIT, MICH.

Products

The latest IMPROVED MONARCH FRICTION SASH CENTER.

MONARCH SELF-LOCKING VERTICAL SASH PIVOT.

The Latest Improved Monarch Friction Sash Center

Designed for use on wood or metal sash, this sash center is equipped with automatic friction and will hold the sash open at any desired angle without the use of a sash adjuster.

It can also be used on double hung windows with a hanging stile, allowing the sash to pivot as well as slide up and down.

This feature permits the cleaning of both sides of the glass from the room side.

It is well adapted for use with inside or outside transoms and will hold the transom open at any desired angle without the use of a transom lift.

Advantages—It is easily applied and absolutely weathertight. The beveled extensions on the ends cover any defect in mortising and hold the pivot in correct position.

Sizes and Finishes—Made in 3 sizes; in cast iron, cast brass or cast bronze, any finish.

Directions for Applying—Directions for applying sash center packed with every set.

Detail Showing Sash Center Applied

Note: The adjustable tension on the friction spring and the mortise cut straight across the sash and hanging stile make it easy to apply and adjust to either wood or metal sash

1 3/4	No. 141	No. 0141
2 1/4	No. 143	No. 0143

Monarch Self-locking Vertical Sash Pivot

The Monarch Self-locking Vertical Sash Pivot consists of a top and bottom pivot and an operating handle. By means of the operating handle (located on the lower rail) the sash is raised clear of the sill rabbet and swung open.

The operating handle engages any one of a number of grooves in a metal disc applied to the stool and securely holds the sash in any desired position. When it is desired to close the sash the action is reversed and

a spring at the top pivot forces the sash down over a tongue in the sill making it both weatherproof and rattleproof. A catch provided at the jamb securely locks the window.

Capacity—This fixture is made in two sizes: smaller size fixture for use with sash up to 150 lb., larger size for sash over 150 lb.

Directions for Applying—Full directions for applying the fixtures are enclosed with each set.

WILLIAMS REVERSIBLE WINDOW EQUIPMENT for Double Hung and Plank Frame Windows.

WILLIAMS STORMPROOF SUBSILL for In-swinging Casement Windows.

WILLIAMS VERTICALLY PIVOTED WINDOW EQUIPMENT.

Adaptability

Williams double hung reversible window equipment is adaptable for use in office buildings, hospitals, hotels, schools—in fact, any place where good double hung wood windows are used.

The plank frame equipment (not sliding) is especially adaptable for schools.

Advantages

Cleaning—

Outside of both sash may be cleaned from inside the room with the window closed. With the double hung type, all cleaning is done from the floor level. Much less time is required and cheaper help can be obtained than on outside cleaning. This reduced window cleaning cost alone will pay for the equipment in a few years and is an economic factor throughout the life of the building.

With the cleaner on the inside and the window closed, there is no physical discomfort nor apprehension on the part of the occupants of the room. In addition, in every day use, reversible window equipment provides ideal draftless ventilation.

Use in Hospitals—Williams reversible window equipment is particularly adapted for use in hospitals where draftless ventilation is of the utmost importance, and where patients must not be annoyed by cleaners climbing in and out of windows.

Showing Air Travel

Double Hung

Little or No Air Leakage—Tests for air leakage between the sash and reversible strip prove conclusively that the passage of air at this point is negligible. These tests were thorough and comprehensive—a copy will be gladly furnished on request.

Weatherstrips and Screens—Any standard type of weatherstripping may be used. Full or half length screens may be accommodated to the double hung type.

Plank Frame Windows—

Especially adapted for schools, eliminate weights, cords and pulleys as well as provide more weather-tight windows than the ordinary double hung window which is not weatherstripped. This type of reversible equipment also provides a greater light area on mullioned windows. Such items save in construction. Plank frame windows are economical.

Hospital Window Being Cleaned from the Inside

Installation

A staff of expert mechanics is maintained to install Williams equipment. This service includes fitting and hanging of sash as well as the application of Williams equipment.

Responsibility

Because the installation is made by mechanics under the direct control of the home office, we can and do assume the responsibility for the proper operation of Williams equipment. This policy has been one of the strong factors in establishing this product during the past twenty-six years.

Draftless Ventilation

Williams Reversible Window Equipment

No special frame or sash construction is required for Williams reversible window equipment, the sash merely being made $1\frac{3}{4}$ in. narrower than the inside width of the frame. In the plank frame type, a plank frame is substituted for a box frame.

The double hung equipment retains all the features of a sliding window with the added advantage of permitting either sash to be completely reversed or tilted to any position. The plank frame equipment does not have the sliding feature.

The Williams equipment consists of:

Williams Corrugated Side Strip—A strip made of well seasoned hard maple, $\frac{7}{8}$ in. thick, of width equal to the thickness of the sash, and corrugated on the sash side. The sash is corrugated (by our mechanics) to meet the corrugations on the strip. The strip is attached to the sash by means of the:

Williams Truncated Cone Pivot—A reliable and effective pivot by which the weight of the sash is automatically used to draw the reversible strip and sash tightly together. The corrugations in the strip and sash are thereby firmly meshed and make a dependable weather-tight joint. This pivot also holds the sash in position when tilted.

Spring Rollers—In the back of the reversible strip is embedded a series of roller and spring devices. Acting against the jamb when the window is closed, these help keep the strip in snug contact with the sash, preventing the window from rattling and allowing the sash to slide freely.

Finishing Hardware—Standard locks, handles, sockets, and poles may be used with the double hung equipment. We do, however, recommend the use of our finishing hardware especially designed for the plank frame equipment.

References—Several thousand buildings have been equipped with Williams reversible fixtures. Some typical installations, with number and types of installations:

Specifications

Double Hung Type—All double hung wood sash to be equipped with reversible fixtures as manufactured and installed by THE WILLIAMS PIVOT SASH Co., Cleveland, Ohio. Said Company to fit and install all sash on which their fixtures are to be used.

Plank Frame Type—All window sash to be of the plank frame type and equipped with reversible fixtures as manufactured by THE WILLIAMS PIVOT SASH Co., Cleveland, Ohio. The contractor shall furnish all frames and sash. THE WILLIAMS PIVOT SASH Co. shall apply their strips to the sash, and they shall fit and place these sash in their respective openings. The hardware (locks, lifts, sockets and poles) for all windows equipped with Williams Fixtures shall be furnished and installed by them, and shall conform with the other hardware in metal and style of finish.

WONDER WINDOW CO.

Manufacturers and Installers of Patented Hardware for a Combined Casement and Double Hung Window

2730 St. George Court, CHICAGO, ILL.

LICENSEES FOR INSTALLATION IN ALL PRINCIPAL CITIES

THE WONDER WINDOW

Description

The Wonder Window is a patented 2 in 1 weatherproof, waterproof inswinging casement window and a regular double hung window installed in a standard box frame and equipped with special patented hardware.

Where Adapted

Its greater convenience, weather-proof and ventilating features make it the ideal installation for homes, schools, hospitals, institutions and every type of public and business building.

Advantages

Cleaning—Wonder Window can be easily cleaned from the inside and eliminates the hazard of window washing.

Shades and Drapes—Can be hung in the same manner as for double hung windows without causing interference in raising, lowering or swinging sash.

Ventilation—Wonder Window can be opened at top and bottom to provide any degree of ventilation desired.

Weatherstrip—Wonder Window is correctly weather-stripped throughout and is absolutely stormproof, insuring warmth and comfort in cold weather together with decided reduction in fuel costs.

Installations

The installation of the Wonder Window is done jointly by owner and WONDER WINDOW Co., or its Licensees, and the work is divided as follows:

By Owner—All frames must be furnished with pulleys and installed in correct locations. All sash, cords (or chains) and weights must be furnished and delivered to convenient location for installation by WONDER WINDOW Co.

All frames and sash are to conform to WONDER WINDOW Co.'s standard millwork details, except that the general design may be modified to harmonize with architectural design, providing the essential details required are left unchanged.

By Wonder Window Co.—All sash shall be fitted and hung, and the sash cord (or chains) and weights will be installed by this company. All standard hardware and special equipment will be furnished and installed by this company. Weatherstrips will be also furnished and installed by WONDER WINDOW Co.

Details—Frame and Sash

The frame is a standard type box frame made for a sash of minimum thickness of $1\frac{3}{4}$ in., and requires no special millwork.

The upper sash is standard check rail type counterbalanced in the usual manner with weights, cords (or chains) and pulleys. Height of sash should be approximately one-quarter the height of frame opening, but this height may be varied to meet requirements of architectural design.

The lower sash (singly or in pairs) are casements hinged on special butts. These butts are riveted to zinc channel slides which operate in metal track. The channels are counterweighted with weights, cords (or chains) and pulleys. Cords or chains are secured to the channel with special attachments.

Height of lower sash should be approximately three-quarters the height of frame opening. Height may be varied to

Typical Sash Grouping

meet requirements of architectural design. This arrangement permits the lower sash to be raised as an ordinary sash or raised to clear the window stool and swing in for ventilation and washing.

Details—Special Equipment

General—Each set of equipment consists of patented zinc channel slides and track, special butts riveted to channels, cord or chain attachments also riveted to channel, sash locks, sash lifts and metal weatherstrips.

Channel Slides—Made full height of lower sash and installed in tracks as shown on detail. An allowance of $\frac{1}{2}$ in. in length is made to permit beveling bottom to fit slope of window sill.

Tracks—Made full height of the frame opening. The outside track is fitted into saw cut in the parting strip and nailed to the pulley stile. Parting strip is secured in place with $1\frac{1}{2}$ -in. No. 6 flat head screws spaced approximately 18 in. on centers.

After sash cord (or chain) has been attached to the channel, the inside track is placed in position and nailed to the pulley stile at top and bottom. The inside track is covered by rebated stop which fits over projecting portion of tracks. Window stop secured in place by owner.

Butts—These are special 3-in. steel butts, of the half surface type, and are riveted to the channel so that the half surface can be readily secured to sash while in position in the opening.

Cord Attachment—Riveted to the back of the channel and can be used for either cord or chain.

Sash Locks and Lifts—Installed on each lower sash. The locks are placed near the strike stile and the lifts in the center of the bottom rail.

Finish of Hardware

The standard finish of the exposed hardware, such as butts, locks and lifts, is dull brass plated finish. Other standard finishes will be furnished at extra cost.

Weatherstrips

The Wonder Window is equipped with Burrowes metal weatherstrips furnished and installed by WONDER WINDOW Co. The following types of strip are installed:

Sill and top..... $1\frac{1}{2}$ -in. zinc rib strip
Sides of upper sash..... $1\frac{1}{2}$ -in. zinc corrugated rib strip
Check rail.....special bronze strip
Strike side of single lower sash..... $1\frac{1}{4}$ -in. spring bronze

The side strips for upper sash are three-quarters of the height of frame opening so that the sash will be engaged with the rib in its lowest position.

Sizes and Set Numbers

Set No.	Type	Height of lower sash, in.
12	Single casement	Up to 52
13	Single casement	52 to 72
14	Single casement	72 and up
24	Pair casement	up to 52

THE CASEMENT HARDWARE CO.

Improved Hardware for Operating Out-swung Casement Windows

FACTORY AND GENERAL OFFICES

406 North Wood Street, CHICAGO, ILL.

BRANCHES

BOSTON, MASS., 120 Pearl Street

NEW YORK, N. Y., 101 Park Avenue (Exhibit, Architects Samples Corporation)

SAN FRANCISCO, CAL., 417 Market Street

Products

Exclusively Operating and Locking Devices specialized for out-swung casement and transom windows—steel and wood.

THROUGH-SCREEN (UNDER-SCREEN) CASEMENT OPERATORS: Worm Gear (Series 25), and Direct Acting Types (Series 7 and 24) for surface, flush or concealed installation. These devices control the casements entirely from inside of any type of insect screen.

OPERATOR and SCREEN UNITS for standard steel casements—Series 80.

CASEMENT STAYS—Self-locking, Positive ("Sliding"), Series 61.

TRANSOM OPERATORS, THROUGH-SCREEN and NON-SCREEN TYPES, for top hung windows.

CLEANING HINGES for wood casements—Series 70.

CONCEALED CASEMENT OPERATOR—Series 35.

Win-Dor Casement Hardware

Advantages, General—A complete line, gradually developed from intensive specialization on out-swinging casement problems, offering a solution appropriate to every construction and type of building.

Security—Positive, self-locking principle eliminates damage through carelessness of users, as well as from winds. This and other security features eliminate dangers to users and remove liabilities from building owners.

Convenience—Quick, simple action with reserve power makes casement operation of Win-Dor devices easy and natural for women.

Durability—Win-Dor devices are designed and tested to stand not only use, but abuse, under extreme operating conditions. Many Win-Dor installations are in good service after ten to fifteen years with no, or very minor, replacements.

Materials and Finishes—All steel or iron parts are furnished in rustproofed finishes only (cadmium or Parkerized). All devices also made in solid brass in all trade finishes.

Specialized Application—Win-Dor operators and stays are the only specialized or patent devices coordinated to the standard practice of steel casement manufacture and attachment. (See notes on final page.) They are equally advanced in their application to all desirable wood casement details.

Availability and Plant Capacity

Distributed for steel casements through leading steel window manufacturers with warehouse stocks and branches throughout the United States. (See final page.)

For wood and steel casements, stock and samples are available from over one thousand leading builders' hardware merchants. Display in permanent exhibit, Architects Samples Corporation, New York, N. Y.

Win-Dor products are manufactured in a modern day-light plant with capacity of over one million units per year.

Development and Research

A special department, staffed by experienced architectural engineers, constantly testing, designing and improving.

Architectural Service

An experienced department freely available for advice on casement screening and operating problems.

Technical Analysis of Duty and Safety Factors for Out-swung Casement Hardware

A brief analysis of these characteristics will give a sound basis for determining satisfactory solutions.

(1) **Wind Pressures as Related to Friction and Positive Holding Means**—Obviously, out-swung casement leaves are subjected to the full force of wind pressures, from which inward opening sash are generally protected. Friction devices may be set for the latter at very low resistance, convenient to operate, yet sufficient for the duty. Out-opening vents are subject to the full force of the wind, which may be calculated

Win-Dor

TRADE-MARK

as per wind pressure table from formula $P=0.033x(V)^2xA$. A friction resistance of 16 to 20 lb. (at center of swing leaf) is the limit which may be operated with reasonable convenience. It, therefore, appears that maximum friction will hold in average but

not in all wind velocities to be occasionally expected. Win-Dor Positive Operators and Stays, as shown on succeeding pages, are designed specifically for such duty, and when locked will hold any practical size casement without injury to such casement or itself, plus a large factor of safety. When operated, there is no resistance to work against and no racking strain on the casements.

WIND PRESSURE ON OUT-SWUNG CASEMENTS

Mi. per hr.	Wind pressure, lb.	
	6-light, 4.5 sq. ft.	8-light, 6 sq. ft.
15	3.34	4.46
20	5.94	7.92
25	9.28	12.38
30	13.37	17.82
35	18.19	24.26
40	23.76	31.68
50	37.13	49.50
60	53.46	71.28

Note: For any constant velocity, puffy wind conditions and vacuums will cause much greater temporary pressures. Hence, occasional severe strains at moderate average wind velocities.

the positive lock will take hold at the slightest movement of the sash.

(3) **The Human Element as Related to Strength and Safety Factor**—Given a device (such as a geared operator), both positive and self-locking, proper design involves meeting not only probable wind pressures, but all conditions of actual use. This involves inevitable occasional abuse:

- (A) Leaving casements open in exceptional winds.
- (B) Abuse of workmen on building.
- (C) Abuse by servants, transients, or other careless users.
- (D) Attempts of intruders to jimmy or force sash.

Tests Made to Determine Average Normal Working Range and Factor of Safety for Rough Usage

The standards for Win-Dor strength and safety factors are set to meet these practical usage factors in all cases—and all Win-Dor devices are guaranteed adequate to every reasonable duty.

The data for these standards obviously are obtainable only from long and wide experience; in the case of Win-Dor, twenty-five years of constant improvement, from actual observation.

(4) **Weather Exposure as Related to Holding Means**—Out-swung casement holders are exposed to a variety of weather conditions which successful products must meet, if they are to endure. All Win-Dor operators and stays use bronze or brass, regardless of cost or competitive prices, wherever experience and tests indicate that corrosion or wear may seriously affect operation. The least expensive grades of Win-Dor may, therefore, be used with assurance not only in dry localities but in salt-air, sea-coast exposures, etc.

(5) **Convenience and Security of Operative as Related to Operating Means**—The locking handle itself cannot always provide convenient or even safe means of swinging an out-open casement, as at full opening, 90°, it will be from two and one-half to four feet from the operative—or inside wall.

Win-Dor Stays reduce the operating reach 12 inches.

Win-Dor Under-screen Operators eliminate it entirely.

Win-Dor Geared Casement Operators, Series 25 and 26

General—Win-Dor geared operators are not only sturdy and practical controlling mechanisms, but are so refined in design that they rank as first grade finish hardware, and can be used anywhere for surface installation. Their fine appearance makes concealment unnecessary, though such application can be readily made where desired.

Where Recommended—For all outswung casements of wood or steel which are to be screened.

Important Features—Bronze worm makes bearings self-cleaning and insures permanent easy working even under salt air exposure. All other moving parts also have bronze bushings and washers.

Quick Action—Only four turns of crank required for full 90 degree opening.

No Back Slip—Patent brake on worm prevents slipping.

Quietness—Careful manufacture, assembly and inspection produce close-fitting parts free from excessive play. Bronze take-up spring on sliding connection also prevents rattling.

Standardized Application—These operators fit any stool with minimum of $2\frac{1}{4}$ in. between sash and screen (with wood casements this space may be reduced to $1\frac{1}{4}$ in.).

Strength—See test chart preceding page.

Steel Casement Application—Most leading manufacturers of steel casements furnish stock casements drilled and tapped for Win-Dor operators, or are prepared to furnish sash so prepared on order without extra cost. Series 25 and 26 operators fit same holes as Win-Dor Series 61 Stays.

Win-Dor Series 25 Operator in Use Through Screen

Win-Dor Series 25 Operator

Has cast gear housing and right and left enclosed mechanism on inside

Win-Dor Series 26 Operator

Has deep drawn metal housing and is reversible to right or left hand

Win-Dor Operator and Screen Unit, Series 80

The Win-Dor standardized casement operator and screen unit consists of Series 26 worm and gear type operator, concealed by a metal stool cover, and flat type screen, as furnished by THE CASEMENT HARDWARE CO., of Chicago.

Important Features—Worm-gear Operation—The finest type of Win-Dor thru-screen operators, as described on preceding page.

Quality Screens Standardized—The finest quality metal frame screens. Made in standard sizes and on an economical production basis.

Ventilators Only Screened—No unwieldy screens over fixed lights.

Easily Attached and Detached—For washing windows, or storage, the screens need not be maneuvered to clear any hardware as this is contained in metal stool.

100% Insectproof—Wire mesh is continuous, no openings are cut through the screen for hardware.

Detail Specification Data—Screen—A first quality top hung metal frame screen—provided with concealed pivot brackets—consisting of a heavy gauge steel frame strongly reinforced at corners, galvanized inside and out, and painted; together with the highest grade 16-mesh solid bronze wire in antique finish.

Operating Hardware—Win-Dor Series 26, reversible worm and gear type operator, provided with a solid bronze worm and bronze bushed gear, accurately machined and housed in an attractive drawn metal housing; parts of steel rust-proofed by means of parkerizing. No. 251 Handle. Special Win-Dor extruded section—easily fitted to all stool widths.

Metal Stool—A deep drawn metal stool of standard sizes to house casement operator. Made of 16 gauge copper steel, parkerized, and in addition painted on both sides. Provided with an upstanding lip for screen contact. Made reversible.

Locking Handles—Cast, flat type, locking handles of iron or bronze, provided with suitable brackets for convenient attachment, using standard drilling and tapping.

Note: Win-Dor combination operator and screen unit is adaptable to casement units of all standard makes.

Recent Improvements—Screen latches improved tight-wedging cam-action. Two latches instead of one on all four-light wide screens. Increased contact margins of screens head and stool. Gauge manufacture of metal stools to permit template installation.

**Nomenclature of Above Diagram**

With the development of an improved type of two-light wide screens, new simplified size and type designations are possible. One standard application now takes the place of three former types.

In other words, for any make of casement the standard two-light wide screen unit fits all single ventilators whether jamb-vented, center or side vented. Four-light wide units similarly apply to all casements of four-light width whether jamb or center vented. This effects great simplification of handling and installing.

With the new simplified practice, designation is made only of width, height and hand: (viewed from inside) first figure is number lights wide, second number lights high, thus No. 23-R, two lights wide, three high, single ventilator, right hand; No. 44 four lights wide, four high, double vent.

Note units cover actual ventilator areas only. See stock types above.

Clearances

Ordinarily the entire inside face of frames should be available to provide ample clearance for screen, but a dimension of $\frac{5}{8}$ in. measured from toe or from section toward plaster line must be allowed as a *minimum* as screen units lap $\frac{1}{2}$ in. If working with such small clearances, plaster line or finishing mould must be absolutely straight and true. It is, therefore, recommended that whenever possible entire inside face of frame be unobstructed.

Win-Dor Casement Operator and Screen Unit Showing Convenient Method of Operation

Showing Method of Operator Installation in Connection with Metal Stool Cover

Application of Series 80 Unit on Double Sash

Win-Dor Operator, Series 7

A direct acting operator. Not geared.

Where Recommended—For wood casements having ordinary butt hinges, particularly in private houses.

Operation—A slight downward pressure on handles releases the automatic lock and permits a swing of 90° with positive locking at 8 points. Handles detachable or permanently attached, as desired. Right and left handed. Steel or brass.

**Win-Dor Series 7 Operator**

Shown in use with ordinary wood (out-swung) casements. Note the application of operator in relation to sash and particularly to screen

**Win-Dor Operator, Series 24-B**

A direct acting operator similar to Series 7 but designed to control wood casements with close-up hinges "under" rather than through the screen frame.

Operation—Same principle as Series 7 but pivot brought flush under screen. Handles detachable only. Right and left handed.

**Win-Dor Series 24-B Operator**

Shown in use with ordinary wood (out-swung) casements. Note this flush type operator makes unnecessary the notching of screens

**Win-Dor Concealed Operator, Series 35**

Where Recommended—An unusually fine piece of finish hardware for wood or steel casements. Eliminates surface application of crank handle over stool.

Construction—Compact, sturdy gear housing with Win-Dor bronze worm. Handsome surface pivot and arm. Bronze ornamental detachable crank handle.

Advantages—Any type of screen may be used without cutting frame and without interference. This operator is immediately accessible and overcomes the objection of concealed sub-stool installations, as mechanism may be entirely removed without affecting window trim.

**Win-Dor Series 35 Operator****- SECTION AT SILL -****Win-Dor Cleaning Hinge, Series 70**

Gives to wood casements the same type of projected swing that is general practice with standard steel casements. Particularly useful for single casements not otherwise accessible for washing from outside.

Co-ordinated with Win-Dor Operators—All Win-Dor thru-screen Operators and Series 61 Stays work with Series 70 Hinges the same as with standard close butts, giving opening of 90°.

Continued on next page

Win-Dor Casement Stay, Series 61

A simple, economical device which has all the best features of security and convenience except thru-screen operation.

Where Recommended—This Stay is widely used in large metropolitan buildings where screens are not used throughout.

Advantages—Automatic Positive Locking—Rigidly engages sash wherever left open. Absolutely insures against breakage even with careless use.

Safety—The lift handle serves both to release the lock and swing the sash. This saves one foot in reach and eliminates stretching by users. Requires only one hand to operate.

Low Cost—Series 61 Stays cost no more than thumb-screw adjusters or friction devices.

**Win-Dor Series 61 Casement Stay**

Installed on steel casement with standard type "offset" or "cleaning" hinges. Note the short reach necessary for control of sash at full 90° opening. Release lift serves as operating handle

**Series 61 Stay with Typical Sill Bracket for Steel Casements****Series W-61 Stay with Stool Bracket for Wood Casements****Win-Dor Series 45 Top Closer**

Where Recommended—Essentially designed for out-swung wood or steel casement windows controlled with gear type operators. The Series 45 is equally efficient for use on in-swung sash, hinged transoms, screen doors and for many other purposes where tight tension contact is required.

Operation—Mechanically simple and completely automatic. Strong enough to overcome warping. Has a pull of 10 lb. Right or left-hand installation. No mortising.

Construction—Entire closer is contained in a neat smoothly finished metal housing size 3 1/2 x 1 1/2 x 1 in.

Finish—Rustproof cadmium, parkerized or solid brass.

**Win-Dor Series 45 Top Closer****Identification**

Win-Dor Devices are protected by patents, and though imitated, are not duplicated. The registered mark Win-Dor is stamped on all genuine fittings where it is inconspicuous when installed but available for protection of users. **Win-Dor**

HAGSTROM MANUFACTURING CO.

Special Hardware for Doors and Casement Windows

25 Maple Avenue, GLEN COVE, L. I., N. Y.

Products (Patented)

THREE-POINT LOCK for single door or casement.

FIVE-POINT LOCK for double doors or casements.

TWO-POINT LOCK for French Astragal Meeting Stile.

HANDLE LOCK and PUSHLOCK for standing leaf of double doors or casements.

AUTOMATIC BOTTOM BOLTS.

HAGSTROM SECRET DOOR LATCH.

HAGSTROM FRICTION CATCH.

LOCAL REPRESENTATIVE

Hagstrom Door and Casement Hardware

Hagstrom door and casement hardware is designed especially to prevent or overcome the warping of sash. It may be used on new or old sash, with absolute assurance of positive results. Both automatic and concealed.

Materials and Workmanship—Brass and bronze used exclusively.

Workmanship of the highest standard.

Hagstrom products are guaranteed in every respect.

Three-point Lock for Single Door or Casement

This lock consists of a mortise latch (bevel front) at the center and spring latches at the head and sill all operated simultaneously by turning the handle. The door is firmly fastened at three points by simply closing it, and opened by a turn of the handle.

Five-point Lock for Double Doors or Casements

The standing leaf is firmly fastened at the head and sill by simply closing it. The moving leaf is firmly fastened at the head, sill and center by a three-point lock. Both doors are opened by a turn of the handle on each door. A patented interlock prevents turning the handle on the standing leaf while the moving leaf is closed.

Note: The handle controlled lock No. 50 may be omitted and a pushlock No. 25 used on the standing leaf as described hereinafter.

Thumb Turn and Cylinder Lock—Three and five-point locks may be equipped with a thumb turn on the inside, or a thumb turn on the inside and key operated cylinder on the outside. *The lock casings are made to receive any standard make cylinders.* Hubs are set either square or diamond.

Two-point Lock No. 4200, for French Astragal Meeting Stile

Sash is firmly held to head and sill automatically. Latches are released by turn of handle. Face of lock is made concave to suit the rolling meeting stile. Width from depth of concave to center of spindle is $\frac{1}{8}$ in. Used with or without thumb turn.

Handle Lock No. 50 and Pushlock No. 25 for Standing Leaf of Double Doors or Casements

The operation of handle lock (No. 50) is explained above under heading "five-point lock."

The pushlock on the standing leaf is operated by pushing with thumb a recessed latch in the face of strike plate which releases the top and bottom bolts allowing leaf to be opened. With this type lock no handle is required on the standing leaf.

Handle lock (No. 550) and pushlock (No. 525) for standing leaf can be made to special order to fit any other manufacturer's lock on the active leaf.

Automatic Bottom Bolts

Where there is no threshold or where the doors and bolts must clear rugs the spring latch at the bottom is impractical, and we recommend using an automatic bottom bolt which is raised when the handle is turned and held flush with bottom of door when open. When door is closed the bottom bolt is released automatically by the action of a lever against the hinge jamb.

Hagstrom Furnishes No Trim

All three and five-point locks are furnished with strikes, top and bottom bolts, wire for operating them and $\frac{1}{4}$ -in. spring brass channel for covering the wire.

HAGSTROM MANUFACTURING CO. do not furnish any trim, such as butts, cylinders, lever handles, knobs or escutcheons. Any standard trim hardware to harmonize with the adjoining hardware may be used with these locks.

All locks furnished with larger backset to order. Backset is figured from lower step of rabbet.

Combination of Locks

Cylinder lock No. 125 with pushlock; No. 150 with handle lock.
Thumb turn No. 225 with pushlock; No. 250 with handle lock.
Latch only No. 325 with pushlock; No. 350 with handle lock.
No. 525 pushlock to suit other manufacturers' locks.
No. 550 handle lock to suit other manufacturers' locks.

Hagstrom Hardware Suitable for Metal Sash

Hagstrom Three and Five-point Locks are also adaptable for metal sash.

Hagstrom Secret Door Latch

A new concealed latch for secret doors and panels. When door is closed no hardware is visible. No push button is used.

Simple in Operation—To close push lightly on the door; to open push hard. Door moves $\frac{1}{8}$ in. When pressure is removed door swings open. If door must be operated from both sides a handle to pull the door is placed on the back. On tightly fitting panels it is sometimes necessary to use auxiliary springs to overcome the effect of vacuum. Shrinking or swelling of the door does not affect operation as long as the door swings free. Latch may be applied to right or left-hand doors without changing mechanism.

Easily Applied—By screwing on the door stop. May be let in if desired. Channel strike furnished, is screwed on door without cutting. If channel strike is objectionable, flat strike can be supplied.

Hagstrom Friction Catch

Designed for cupboards, cabinets, closets, wardrobes, refrigerator doors, in fact, anything on hinges. Made in three sizes—Nos. 10, $10\frac{1}{2}$ and 11. Nos. 10 and $10\frac{1}{2}$ are designed for small doors in cupboards, medicine closets, cabinets, small refrigerator doors, etc. No. 11 is designed for wardrobe doors, casement windows, screen doors, etc.

This catch prevents warping of new doors, and doors already warped are, by its action, drawn back to normal.

It prevents rattling of doors and hinged windows. It prevents the entrance of dust, by holding doors and windows tightly closed. Remains effective even after door has shrunk considerably.

PLATE 1

Hagstrom Light Trap Lock

This automatic locking device prevents both doors connecting corridor or X-ray room and dark room from being opened at the same time.

When one door is opened, this Hagstrom Lock, through its connecting bar, locks the other door securely. Not until the opened door is closed tightly does the connecting bar shift to release the locked door. As soon as this door is opened, the opposite one is locked immediately.

In addition to this device, ordinary locks and door closers are used.

Hagstrom Secret Door Lock

An easily operated lock designed for secret panels and doors opening outward. When panel is closed, no part of this lock is visible. The lock, itself, is set in the jamb; the strike in the panel, flush with the inside. The key, which is thin, is inserted between the panel and jamb. Key inserted at point A and raised to point B, as shown on the detail, unlocks door. Adjustment of trigger C with bolt pressed back renders lock inoperative and cabinet accessible without key. Readjustment of trigger C releases tongue so that when door is closed it locks automatically.

This latch may be applied to either right or left hand doors without changing mechanism. If hook strike is objectionable, flat strike can be supplied.

SLIDING CASEMENT HARDWARE FIXTURES

Description—Hoffman Casement Fixtures (United States and foreign patents) are for outward or inward opening windows up to a maximum size of 2 ft. 2 in. x 7 ft. per sash. They support the sash entirely from the head and they are not hinged to either jamb, which method provides many advantageous features.

Advantages—(1) The sash are firmly attached to the frame at the top by brass rollers engaging in a metal channel track, and at the bottom by guide blocks on a metal angle track.

(2) Top support prevents binding from swelling sash because sufficient clearance is left at the sill without affecting weathering.

(3) Stops both inside and outside at the jambs and three butts prevent warping and aid weathering.

(4) All cleaning is done from inside.

(5) The windows are weathertight.

(6) Ventilation. By slightly opening the window, a flue is created that draws out at the top all impure air which is automatically replaced with fresh air at the bottom without any direct draft.

(7) The sashes may be opened to any position up to the entire size of the frame at either jamb or at any point between the jambs and need no adjusters because one sash acts as a stay or brace to the other.

(8) The windows are designed by the architect and specified under carpentry or millwork the same as any other window. This company furnishes hardware only.

(9) Sash in series may be used in frames of any width omitting all mullions, providing head is securely bolted to lintel to prevent sagging. (We have a special detail sheet suggesting several methods of head support.)

(10) Sash in even numbers may be $1\frac{3}{8}$, $1\frac{3}{4}$, or $2\frac{1}{4}$ in. thick. Single sash or sash in odd numbers must be $1\frac{3}{4}$ or $2\frac{1}{4}$ in. thick. Hardware for inward opening sashes is made for sash in pairs only.

Adaptability—Hoffman Casement Fixtures are strong and serviceable, will outlast ordinary window hardware, installation is simple and because windows so equipped combine all good features of all other types

of windows they are adapted for typical use in any building, public or private.

Hardware Furnished—The fixtures are packed in complete sets containing all necessary hardware for sash in pairs or for single sash. Track is included up to 2 ft. for each sash. Wider sash require extra track.

Grades and Prices—All prices net f.o.b. Chicago. Distribution through agencies. Stock finish: dull brass.

No. 1—Galvanized tracks; galvanized top hangers with brass wheels; galvanized bottom guides with brass swivel pins; *plated steel* butts, fasteners and handle. Stay arms for single sash, galvanized. For pairs of sash, per set—\$5.00. For single sashes, per set—\$4.50. For cremone bolt (steel) add \$1.00.

No. 2—Same as No. 1 excepting butts, fasteners and handle are solid brass, tumbled finish (not hand polished). For pairs of sash, per set—\$7.00. For single sashes, per set—\$6.00. For cremone bolt (brass) add \$1.50.

No. 3—Same as No. 2 excepting that sill track is *solid brass*, and butts, fasteners and handle are *solid brass*, hand polished. For pairs of sash, per set—\$9.00. For single sashes, per set—\$8.00. For cremone bolt (brass) add \$1.00.

No. 4—All parts *solid brass*. For pairs of sash, per set—\$12.00. For single sashes, per set—\$10.50. For cremone bolt (brass) add \$1.00.

Also additional grades for both outward and inward opening windows.

Information Required with Orders—(1) Exact width of opening *jamb to jamb* (not between stops); (2) number of sash in each opening; (3) if single sash are used, state whether they swing to the right or left when facing them from inside the room. (4) Give the grade of hardware and the finish desired. (5) Sash thickness and approximate height is desirable, but not necessary. (6) State if Cremone bolt is wanted.

Specification Form—All window frames and sash shall be milled according to details and the contractor shall exercise particular care to set the frames perfectly level and square and shall bolt the head to the lintel at intervals not exceeding 4 ft. wherever the span is greater than 4 ft. The sash shall be hung with Hoffman Casement Fixtures (here insert grade number) as manufactured by the ANDREW HOFFMAN MFG. Co., 616 Straus Building, Chicago, in exact accordance with details and directions furnished by the manufacturers.

HOFFMAN GRIPLOX CASEMENT FASTENER

Employing a new principle in casement fasteners

It Grips and Locks

Double Acting—It Closes and Opens.

Hoffman GripLox is our latest development in casement fasteners. It will tightly close even a warped window and will force open a jammed window. This double action is secured through the motion of a cam acting upon an oval pin. Hoffman GripLox first grips and pulls the window closed and then locks it securely. A sturdy cam begins to engage the pin while the window is still partly open, and further turning of the handle closes and locks it, secure from rattling. The action is reversed when the window is being opened, the cam engaging the opposite side of the oval pin and actually forcing the window open sufficiently far to break the sticking due to paint, to swelling, or to tight weatherstripping.

We believe that this double-action casement hardware is the only type yet developed that will stand the strain of opening and closing tightly weatherstripped windows.

Hoffman GripLox, with its large bearing surfaces and properly calculated strains, will wear for many years. It is made in cast brass, in wrought brass, and in plated wrought steel.

Griplox Surface Bolt

For Inswinging and Outswinging Casements, French Doors, and Bed Closet Doors.

The GripLox surface bolt is designed to complete the line of GripLox Fasteners. It works on the same principle. This surface bolt has eliminated all the troubles so long associated with ordinary surface bolts. The user need only to turn the handle, and the sash is drawn shut and tightly locked. Due to the leverage of the handle, the bolt turns easily and without binding. There is never any doubt as to whether the sash is really locked. There is no question of the bolt properly meeting the strike, even though the sash or door may be warped or shrunken. There is no unsightly wear on visible parts. There are no bearings or rivets to become loose. Made of cast brass or plated steel, in 4, 6, and 9-in. lengths.

COMBINATION CREMONE BOLT

For Hoffman Sliding Casement Windows—Used on Outswinging Only

The Hoffman Combination Cremone Bolt combines the functions of hinges, fasteners, and pull handle, and is especially designed for use with outswinging Hoffman Sliding Casement windows. It makes use of the GripLox principle which is explained on a preceding page.

The Hoffman Sliding Casement Windows, when equipped with this combination cremone bolt, are drawn in tightly and locked top and bottom in one operation by a quarter turn on a handle located at a convenient height above the floor.

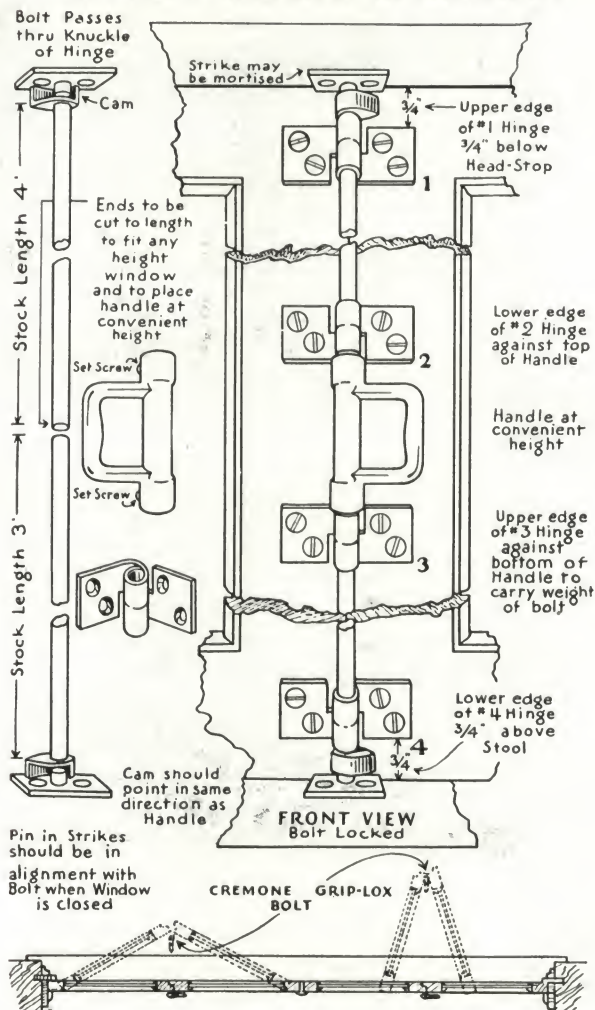

This combination bolt consists of cams, operating on the GripLox principle, at the top and bottom of rods which are joined in a cast bronze handle, the whole assembly being supported by brackets which also act as hinges for the casements.

The use of this full length bolt makes the window easy to open or close, simplifies ventilation control, and closes the window so tightly as to make it weatherproof even in exposed positions.

A Pair of Outswinging Sliding Casements

COMBINATION CREMONE GRIP LOX BOLT WITH HOFFMAN SLIDING WINDOWS

Especially when windows are difficult to reach, as over a sink (see illustration) or over a radiator, is the unique ease of operation of the Hoffman Sliding Casement Window and combination bolt appreciated.

The advantages realized by the use of the Hoffman Combination Cremone Bolt are summed up in these points:

- (1) A positive horizontal force is applied to the sash, drawing them in tightly, even though they may be warped or heavily weather-stripped.
- (2) The mechanism is simple and positive with no gears to wear or get out of order.
- (3) There is no disfiguring wear on visible surfaces due to the fact that the bolt does not slide vertically through sleeves.
- (4) The bolt is stocked in 7-ft. lengths and may be cut down on the job to any size, to fit even the shortest windows. The installation is very simple; there is no mortising necessary and the hack-sawed ends of the rods are concealed within the handle.
- (5) The price is very moderate.

The Hoffman Combination Cremone Bolt is made of solid brass or plated steel. The bolts are stocked with a 4-ft. upper section and a 3-ft. lower section. The stock bolt therefore may be used on casements up to 7 ft. high, and the handle may be placed as much as 4 ft. below the top of the sash.

GRIPLOX CREMONE BOLTS

For Single and Double Casements

Hoffman Cremone Bolts overcome the usual obstacles to easy closing and secure locking of inswinging or outswinging casements by use of the Grip-Lox principle. For explanation of this principle see GripLox fasteners on a preceding page.

On Double Outswinging Casements

—With rabbeted meeting stiles—see upper illustration—the cremone bolt is applied to the sash that has the outer rabbet projection. When the other sash is closed first, the cremone bolt draws both sash tightly shut, top and bottom at once, by a quarter turn of a handle at a convenient height above the floor.

On Double Inswinging Casements

—With rabbeted meeting stiles, one bolt applied to the sash that has the inner rabbet projection will clamp both sash shut. If, as in the lower right illustration, the meeting stiles are not rabbeted or fitted with an astragal, a bolt is applied to each sash. Notice that the unlocked sash is warped at the top. This warped sash is easily and tightly closed with the Hoffman Cremone Bolt.

On Single Casements—Inswinging or outswinging. By attaching the Hoffman Cremone Bolt with offset brackets, the handle is placed far enough from the side jamb to give generous clearance for the fingers.

**CREMONE
GRIP LOX BOLT**

**Double
Outswinging
Casements**

Single Outswinging Casements

Above:
Double Inswinging Casements

The stock length of the bolt is 7 ft. It is easily cut down on the job to fit any window. Installation is simple and no mortising is required.

HASKELL & HATCH COMPANY

Apexeon Operator-Screen Unit for Metal Casement Windows and Apexeon "Lifetime" Flat Screens

47 Union Avenue, Jamaica Plain Station
BOSTON, MASS.

THE APEXEON UNIT, A CASEMENT OPERATOR AND SCREEN COMBINATION

This modern Apexeon Unit was designed to meet the need of a dependable, easy means of operating and locking outside-opening casement windows from within, without removing or opening the screen.

This unit, simple in construction and free from unnecessary and awkward hardware, solves satisfactorily the threefold problem that has long troubled architects, builders and home owners:

First—How to operate metal casement windows easily and hold them in any position firmly, without using an unsightly array of hardware.

Second—How to avoid admitting insects when opening, closing or locking such windows.

Third—How to screen them to the greatest advantage.

The Apexeon Unit, due to its unique construction and operation, satisfies these three requirements completely and economically. It permits the casement to be operated and locked from within and with little effort. In addition, it gives a strong, corrosion-proof screen that will last indefinitely.

Right:

Apexeon Operator-Screen Unit

Its operator, at the lower right corner of the frame, has been turned to hold the window half open

Below:

The Same Apexeon Operator-Screen Unit

Window has been closed by simply turning the operator. It is locked tight against frame by Apexeon Latch on left of frame

THE APEXEON INVISIBLE CASEMENT OPERATOR

This truly remarkable device is revolutionary and fills a long-felt need.

Its powerful but simple mechanism (vise-like in action) moves the window easily and smoothly and holds it firmly in any position. Dust and dirt cannot obstruct it. There is nothing to bend, break, get out of order or wear out. It is as strong as the hinge itself and as effective as any lock. The metal casing protects it from the weather.

At no point do two corrosive metals touch. It may lie idle for months and still work smoothly.

It is literally *invisible* from the inside. All that shows is the small spindle which projects through the casement. The handle is like the key of a clock. It may be left in place or laid aside when not in use.

The Apexeon Operator itself is attached to the extension hinge on the *outside* of the window and vir-

tually becomes a part of it. It is applicable to all standard makes of casements with this type of hinge.

Thus the window may be opened or shut without even touching the screen and insects have no chance to get in during the operation.

But the Apexeon Operator has a wider field of usefulness than as an aid in excluding insects. Whether screened or not, windows must be opened and shut. *Convenience* and *sightliness* are always important while *safety* is a matter of no small consequence. Where Apexeon Operator is installed there is no reaching out of a window and no danger of accident.

In spite of its conspicuous advantages, the Apexeon Operator is so moderate in cost that there is no reason why every metal casement window should not be equipped with one.

Apexeon Window Operator

Window has been opened by the operator and the handle removed

APEXEON LATCHES

Even if the window can be closed without disturbing the screen, insects are bound to be trapped between them. If the screen must then be moved in order to *lock* the window (as is usually the case), these insects are sure to be released *inside*.

Why defeat the one purpose for which screens are installed by allowing this to occur?

Apexeon Inside Latches eliminate this difficulty.

Where one of these is installed, the screen need *never* be touched—except to remove it. And when that becomes necessary it may be done in an instant without effort. This is due to our simple method of attaching the screen to the casement.

Inside Pull-tight Latch

This latch is provided with our single-vent unit. The finger projecting through a slot in the casement picks up the window and *pulls* it so tightly closed that it is proof against wind and weather.

The handle is unobtrusive. In fact, it is distinctly ornamental. It may be had in any finish desired and does away with the usual iron locking handle on the window.

Handleless Through-screen Double Latch

Provided with our double-vent single-screen unit and is unique, simple and effective.

The spindle of this latch projects about half an inch through a small hole in the center of the screen. This spindle is the exact size of that on the Invisible Operator, $\frac{1}{4}$ in. square.

Since *two* operators come with unit (each having its own detachable handle or key), means of turning the latch are always at hand and no permanent handle is required. There is, therefore, nothing to mar the surface of the screen.

An inconspicuous detachable handle may be had if desired but is obviously not needed.

Without the obstruction of a permanent handle the screen may be easily removed: the spindle slips smoothly through the hole. There is absolutely no chance for insects to enter.

The latch itself is compact and strong. It occupies only the width of the casement frame and locks both windows or either one separately.

In this case also the customary iron locking handles are omitted.

Apexeon Inside Pull-tight Latch
Release position

Apexeon Double Latch with Detachable Handle
Shown without screen

Apexeon Double with Handle Removed
Shown with screen in place

APEXEON ALL-METAL "LIFETIME" SCREENS

The all-metal "Lifetime" Screens provided as a part of our operator-screen units are produced in our own factory under our own patents and embody distinctive features of great value.

The slender, graceful frames make them acceptable in the most refined surroundings.

Made of *solid* metal, joined at the corners by our own patented method, they defy all abuse short of actual violence.

They are so designed as to yield the necessary strength and rigidity from the least possible amount of material and are, consequently, remarkably *light*.

Because they are so small, they obstruct almost no light and are very *inconspicuous*.

Being solid (and consequently proof against corrosion from within) they will literally "last a lifetime." Screening is high-grade 16-mesh rustless bronze. These screens are attached to the casement in the simplest manner imaginable and are easily and quickly moved.

The spline of pure aluminum which locks the wire-cloth into the frame may be easily removed if rewiring becomes necessary. Instead of having to be pried out of the groove in the frame, the spline may be *pushed* out at the ends through the little hole in each corner of the frame and then drawn out. Bending cannot injure it. The same spline can always be used again. Apexeon

Screens are, therefore, truly and readily rewirable. (See illustration on following page.)

Apexeon Screen No. 1—Solid Steel

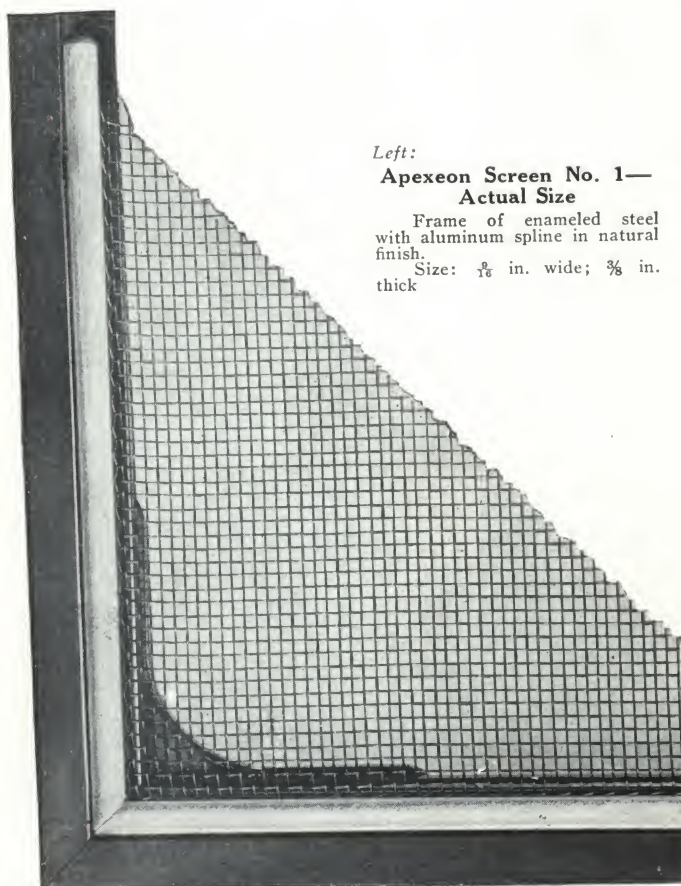

This may be termed our "standard" casement screen because it meets the demand of the majority as to price without any sacrifice of efficiency or beauty.

It is finished in any color desired and, unless otherwise specified, the aluminum spline which locks the wire-cloth in place is left in its natural silvery color—thus imparting a very rich refined effect. Since aluminum does not rust, it retains its new appearance permanently.

Apexeon Screen No. 2—Solid Duralumin

This screen is necessarily somewhat more expensive than steel but has the advantage of being as *strong* as steel and as *light* as aluminum. It is these properties that have resulted in the adoption of duralumin in the construction of aircraft, a fact of no little significance in connection with window screens.

Being non-corrosive, this frame is ordinarily left in the natural color of the metal with a beautiful satin finish. There is an atmosphere of richness about it that is satisfying whether it blends or contrasts with its surroundings. A durable finish can be applied to duralumin if colors are desired, but, because it is so pleasing in appearance, we recommend the natural finish.

Frame of solid duralumin in
natural finish.
Size: $\frac{5}{8}$ in. wide; $\frac{3}{8}$ in.
thick

Installation of the Apexeon Unit

No preparation is required for the installation of the Apexeon Operator-Screen Unit, except by the casement manufacturer. There is literally nothing for architect or builder to think of or do in this connection.

When the Apexeon Unit is specified it appears on the job as an accessory to the casement which has been prepared at the factory to receive them. It does not touch or depend upon anything else and is supplied by the casement manufacturer.

This means no diagrams or instructions to give or follow. No trying to make various parts fit. Nothing to plan for except the sizes of the openings and what casement is to be used. The rest is taken care of by the casement manufacturer and ourselves.

Cost of Apexeon Unit

In spite of the outstanding advantages it offers, the Apexeon Operator-Screen Unit is so moderately priced that it is available for any thoroughly good job.

How to Specify

In Order to Secure the Apexeon Operator-Screen Unit on Metal Casement Windows—Simply specify: Metal casement windows to be equipped with Apexeon Operator-Screen Unit as manufactured by the HASKELL & HATCH COMPANY of Boston, Mass. Add to this the type of Apexeon screen desired.

Or: Metal casement windows to be equipped with operating device employing screw and traveling nut type of mechanism attached to lower hinge with spindle projecting through a hole in the casement. Latch or locking device applied on inside of casement with finger projecting through casement, engaging keeper on the window and operating through a cam action on handle with spring attachment for holding window screen in position. Both operator and latch to be so adjusted as to obviate the necessity of disturbing the screen at any time.

Flat screen of rewirable type, 16-mesh bronze, with solid metal frame (steel or duralumin) attached to casement by means of brackets on casement on side away from holding spring on latch.

APEXEON "LIFETIME" OUTSIDE FLAT SCREENS

Although the screens already described are appropriate for *all* types of windows, we manufacture, in addition, what may be termed a super-screen which we strongly recommend for outside installation. This flat screen insures permanent satisfaction and freedom from trouble on double-hung or inside opening casement windows. It is especially recommended for the screened-in porch. Consequently a *complete* screening job can be done with Apexeon Screens.

Apexeon Screen No. 3

The frame is *solid* duralumin with genuinely welded corners which are actually stronger than the sides. Since duralumin weighs only one-third as much as steel or bronze, the advantages of solid construction are obtained without sacrificing lightness. These solid frames cannot be injured if accidentally dropped on

corners or edges. There is no thin metal to bend out of shape.

Since the frames of all Apexeon Screens are solid, they are installed in channels on outside positions. Our channels are pure aluminum. No chance of rusting, swelling, shrinking or warping. The screen always slides smoothly.

Since aluminum and duralumin do not rust or corrode, these screens may be left in place all of the time without fear of injury.

This screen is ideal for double sliding installation because it is so thin. The outside width of the double channel is only $\frac{3}{4}$ in.

These screens are not cheap in the ordinary sense but are truly economical and most appropriate for a strictly fine outside installation.

Dimensions: $\frac{7}{8}$ in. wide; $\frac{1}{4}$ in. thick.

Apexeon "Lifetime" Screen No. 3—Illustrating the Rewirable Feature

Frame of solid duralumin in natural finish.
Size: $\frac{7}{8}$ in. wide; $\frac{1}{4}$ in. thick

SAN FRANCISCO, CALIF.

FACTORY: OAKLAND, CALIF.

Products

SEMI-REVERSIBLE FIXTURES
FOR CASEMENT SASH.

REVERSIBLE TRANSOM FIXTURES.

CASEMENT CRANK OPERATORS, for reversible casements, transoms, awning type sash.

Semi-Reversible Fixtures for Casement Sash

"Casewin" Semi-Reversible

Casement Fixtures are used where the highest standard of workmanship is required and in the finest of buildings and homes. Made in brass or steel.

Adaptability—Can be adapted to any form of casements, single, double or triple without mullions, being particularly designed for average type and size casements.

Advantages—Casements hung with our "Casewin" Reversible Fixtures operate easily and smoothly and can be easily cleaned from the inside of the room. Heavy sash of recommended sizes are held firmly and very securely without sagging. In operating the sash there is a feeling of firmness and strength.

Casement adjusters and butts are unnecessary.

The sash require no notching at the corners for the reverse position when sash and frames are made as per our detail sheet. It is a simple matter for the carpenter to attach the sash and frame plates as the fixture is of the two-unit type, and the sash and frame plates are attached independently. This feature permits the sash to be removed from the frame at any time by simply taking out the four screws which fasten the sash and frame plates together, instead of all the screws in the tracks as is true of the unit type fixture.

The brass slide shoes of these fixtures are fitted with a special patented latch spring feature for holding the sash in various opened positions firmly and rigidly against wind pressure.

The springs do not serve as a drag or frictional means of holding the sash, as they engage in slots in the tracks and act as a spring latch, or catch, which greatly prolongs the life of the springs and makes them practically everlasting.

Grades

Hardware as manufactured by the Hardware Division of the PARKER-REGAN CORPORATION is known as "Casewin" Quality Hardware for use where the highest standards of workmanship are required for the finest buildings and homes.

"Casewin" Quality Hardware

As the hardware is a vital part of a casement window we take pride in the quality of the "Casewin" line of casement hardware which we offer the building world. In the designing and manufacture of "Casewin" Hardware it has been our aim to supply the trade with casement hardware that will meet the requirements of the most fastidious architects and builders who demand the best obtainable.

"Casewin" Hardware represents the result of years of experience in the designing and manufacture of this class of merchandise, and embodies the highest standards of workmanship and materials.

A casement window equipped with "Casewin" Hardware possesses all the essential features to be desired in the finest of buildings and homes.

"Casewin" Hardware is manufactured by the Hardware Division of the PARKER-REGAN CORPORATION in their Oakland, California, factory. The reputation gained by the PARKER-REGAN CORPORATION in its years of manufacturing and distributing throughout the markets of the world, stands back of every item manufactured in its hardware division.

California Residence Equipped Throughout with "Casewin" Reversible Fixtures

Sash Can Be Reversed to a Convenient Position for Cleaning Both Sides of Glass

Apartment House Equipped with "Casewin" Automatic Casement Adjusters

Fixtures are entirely concealed in the sash when closed.

Sash can be placed in any suitable position to either direct refreshing breezes or deflect disagreeable winds without the loss of proper ventilation.

Will not rattle or slam in the wind.

The track portion of fixtures fit up tightly against the head and sill which eliminates any open space or dust pocket.

Construction—Our fixtures are made of the finest of materials, rolled to our specifications. The tracks, sash plates and arms are of steel and are parkerized which is a nationally used rustproofing process.

All other parts, such as the slide shoes, rivets and pivot washers are of high grade brass and are non-corrosive.

The friction springs are of phosphor spring bronze.

These springs are securely held in the slide

shoes so that there is no possibility of their coming out or working loose.

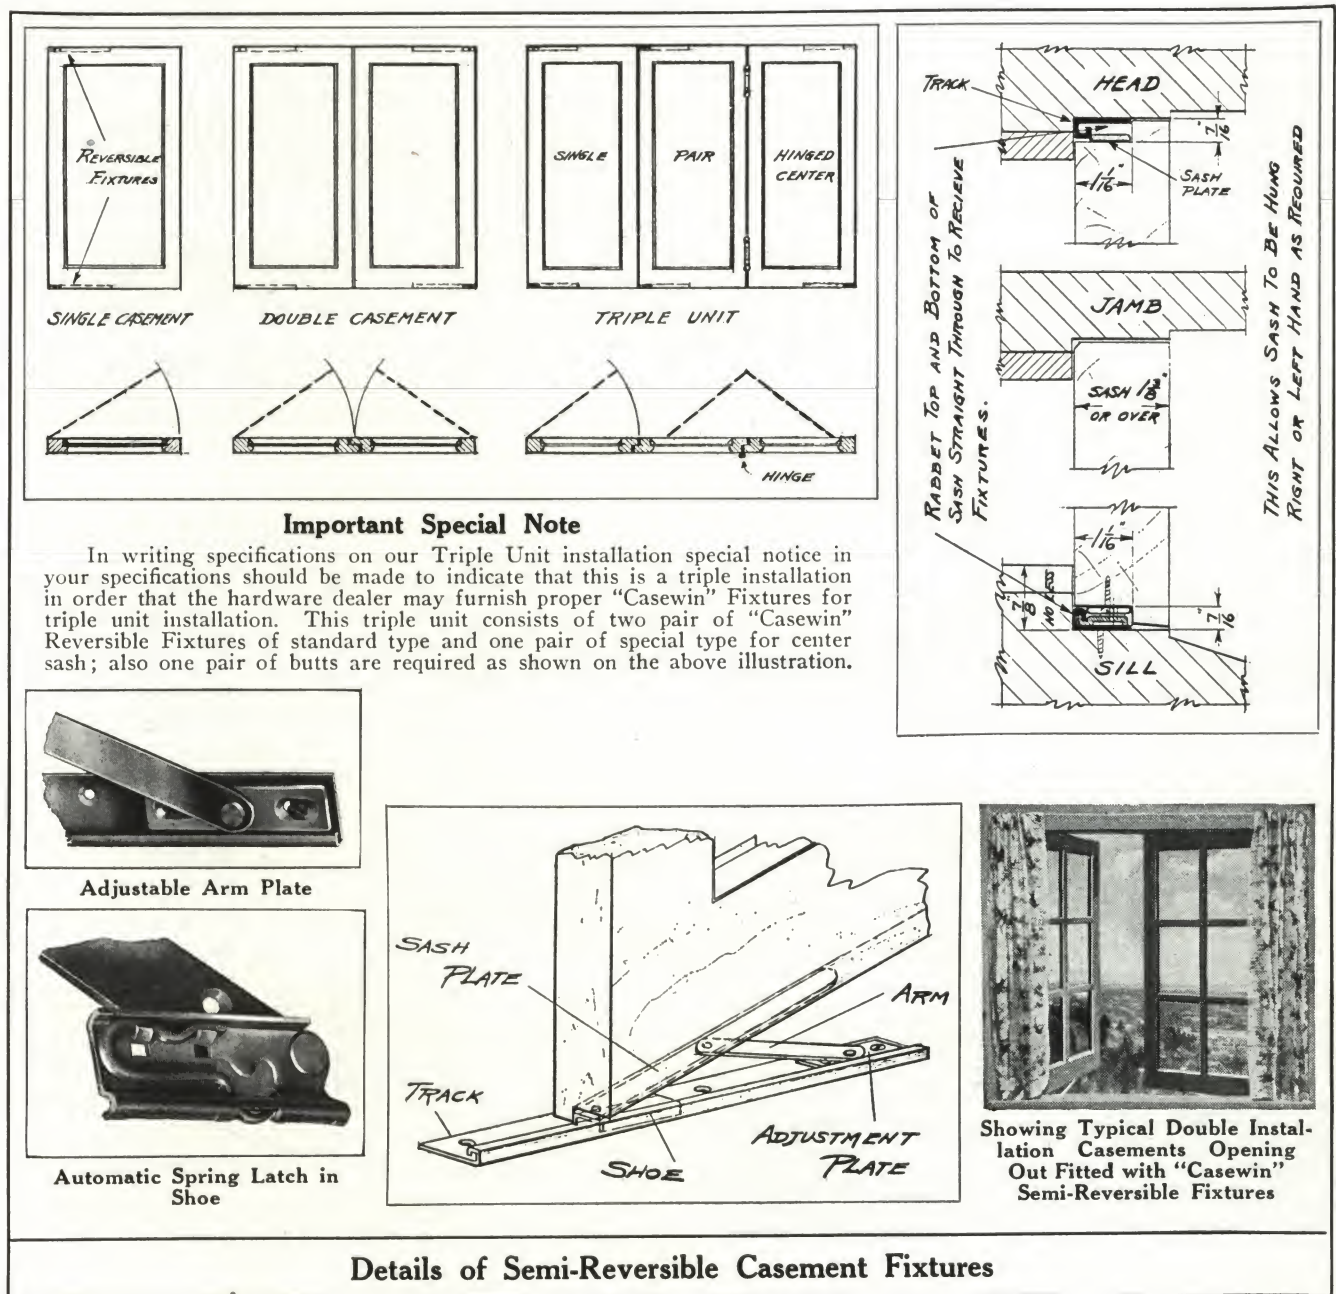

"Casewin" Fixtures are built to withstand all ordinary usage, and when properly installed will give perfect satisfaction for the life of the building.

Screens—All types of inside screens can be used on this type of reversible casement window.

Costs—Considering the quality of "Casewin" Fixtures, plus the labor saving features due to ease of installation, the cost to builders is most attractive.

"Casewin" Heavy Construction Spring Latch Type Semi-reversible Fixtures with Adjustable Arm Plate

The "Casewin" Spring Latch Type Fixture is recommended for sash sizes from 11½ to 30 inches wide and up to 5 feet 6 inches high.

Adjustable Arm Plate

The adjustable arm feature assures ease and proper fitting of sash in the installation.

Heavy Construction Spring Latch Type

G. F. S. ZIMMERMAN CO., INC.

Manufacturers of Fasteners for Shutters and Casements

FREDERICK, MARYLAND

ZIMMERMAN FASTENERS MAKE SHUTTERS USEFUL AS WELL AS ORNAMENTAL

Zimmerman Fasteners make shutters conveniently useful by locking them positively, without rattle, in the closed position as well as wide open, back against the wall, and in various intermediate positions. And they can be changed from one position to another quickly and conveniently.

With the head of the adjusting bar in the single hole sill cup, the shutter is held back against the wall with no possible rattle. The holes of the sill plate permit holding the shutter in various bowed positions. Placing the adjusting bar through the C-loop on the shutter with the head of

the bar in one of the holes in the sill plate locks the shutter closed so that it can not be opened from without.

Made of iron and steel, they do their work efficiently for the lifetime of the house.

Furnished either galvanized or in black enamel. They are often painted to match the shutters.

Simple in construction and operation.

Inexpensive, strong and efficient.

Zimmerman Fasteners are often used as casement operators. Sill fixtures to mortise flush into the sill are supplied specially for this purpose when specified.

UNITED SPECIALTIES MFG. CO. LTD.

Manufacturers of Casement Window Hardware

RICHMOND HILL, NEW YORK, N. Y.

Products

For the past 24 years this Company has devoted its entire efforts to the manufacture of fine casement window adjusters. The result of this specialization has been the production of a most complete line of casement, door and transom adjusters and includes the following items:

CASEHOLD ADJUSTERS in many types and sizes; CONCEALED TRANSOM ADJUSTERS; CONCEALED WINDOW or DOOR ADJUSTERS; CONCEALED and SURFACE TYPE DOORHOLDERS; DOUBLE ACTING ADJUSTERS for Lavatory Windows; CASEMENT STAYS; CASEMENT FASTENERS; CASEMENT BOLTS; SHUTTER TURNBUCKLES, etc.

Quality

United adjusters are known from coast to coast for their superior performance and high quality workmanship and finish.

Specially Constructed Fittings

We solicit details of conditions which require special construction of our products.

Specifications

In specifying designate article by name and size. All hardware dealers have our complete catalogue, prices and data pertaining to all fittings listed. Special finishes to match other hardware can be promptly furnished.

CASEHOLD ADJUSTERS SIX SIZES

PATENTED

TYPE "C"

FOR ARCHED DOORS AND TRANSOMS

With six different sized adjusters to choose from proper attention may be given both to appearance and strength.

Each size is adjustable—therefore any opening from the smallest Casement to the Traffic Door or French Window may be properly filled and the resistance accurately set.

Rotation of the barrel provides easy regulation of the degree of resistance yet it cannot be entirely loosened or made too stiff to operate efficiently.

EASY ADJUSTMENT

MAY BE INSTALLED EITHER AT TOP OR BOTTOM.

CONSTRUCTION

Tube, rod, and brackets are made of solid brass. The friction element is similar in general principle to an expansion bolt with a steel spring interposed to add flexibility and take up possible wear. The friction shoes upon which the action and life of the adjuster depend are of die-cast babbit metal and in operation are forced into contact with the inner wall of the tube. This design not only permits a fine degree of adjustment but provides the greatest possible friction area.

Self Lubricating
No oil or grease is used; therefore the resistance does not vary in extremes of temperature.

SIZES	LENGTH INCHES CLOSED	LENGTH INCHES EXTENDED	DIAMETER	SIZE OF WINDOW
0	8½	12½	½	12×30
1	9½	15½	½	15×36
2	11	18	½	20×48
3	10	15½	¾	20×72
4	12	19½	¾	30×60
5	15½	26	¾	42×84

Fool Proof

The adjustment feature will not permit entire loss of friction or a tension too tight for easy operation.

**MADE IN ALL SIZES**

Universal joints at both pivot centres enables the Casehold Adjuster to be used on curved headed doors or windows. It is also suitable for semi-circular or arched transoms.

TYPE "D"

FOR DOOR OR CUPBOARD STOPS

This fitting is similar in appearance to the standard Casehold Adjuster; in place of friction, however, it is free-sliding. A coil spring is provided to act as a shock absorber when the full limit of opening is reached.

It is suitable for any hinged opening where it is desirable to prevent the travel past a pre-determined point. Made in all sizes.

TYPE "E"

THUMB-SCREW ADJUSTER

As illustrated this is a telescopic thumb-screw type adjuster it has no friction but is equipped with a cushion spring as in Type D.

It is used to limit the opening, or to hold the door or window rigid in any position.

ADVANTAGES.
Governed control
the transom will
not "drop open"—
an even pressure
is required to
move it.

Safety limit
the opening is lim-
ited to about 40°.

Adjustable—
the friction can
be regulated to
exactly counter-
balance the drop-
ping weight of
the transom.

Inconspicuous
the entire fitting
is concealed.

Three sizes—
the largest or
smallest transom
may be thus
controlled.

For steel transoms
this adjuster
has been adop-
ted as standard
equipment.

IMPORTANT

Specify size according
to transom height.

SIZE	LENGTH CLOSED	LENGTH EXTENDED	TRANSOM HEIGHT
7	5 3/8"	7 1/2"	12 to 18"
8	7 3/8"	11"	18" to 24"
9	9 1/4"	14"	24" to 36"

CONCEALED TRANSOM ADJUSTER

PATENTED

TYPE "M"

The Type M ad-
juster is similar
in construction
and differs only
in the pivotal move-
ment of the arm.

It is especially
designed for
steel construction
where the clear-
ance between
sash and frame
is less than 3/16"

The drawing shows
installation on
centre-pivoted
steel sash—it is
equally effective
on top or bottom
hung transoms.

CONCEALED CASEMENT ADJUSTER

PATENTED

MADE IN TWO SIZES

SINCE 1910

TUBULAR DOOR HOLDER

PATENTED
TELESCOPIC FRICTION TYPE

FEATURES

Surface application.
Fine adjustment.
Self lubricating.
Inconspicuous.
Used inside or outside.
Shock absorbing spring.

The Tubular Door-holder is recommended for use on Traffic Doors where it is not practical to use the Concealed Doorholder.

As shown it is screwed or bolted to both door and frame and, where required, back plates are furnished with the bolts.

This holder may also be applied on the reverse side of the door; in this case T.D.H. Type A should be specified.

Adjustment is obtained by rotation of the barrel.

UNITED BALANCED ADJUSTER

PATENTED
FOR LAVATORY AND LIGHT SHAFT WINDOWS

The United Balanced Adjuster is designed to control pairs of sash that are top and bottom hinged as shown on the drawing.

Such windows not only provide full ventilation; they also ensure privacy as direct vision through the opening is prevented.

The Balanced Adjuster has an adjustable friction pivot to hold the sash from idle movement yet they may be opened or closed without effort.

Full limit of opening is 30 degrees.

UNITED CASEMENT STAY

MADE IN BRASS OR IRON

CASEMENT WINDOW BOLTS

MADE IN BRASS ONLY

CASEMENT FASTENERS TYPE F1

This fastener is so designed that the rivet or pivot post cannot become loose. The key plate shown above is compressed as the four screws which secure the fastener to the sash are tightened; thus constant friction is maintained between the rivet head and handle. It is also reversible for either right or left hand.

UNITED SHUTTER TURNBUCKLE

SPRING & DESIGN PATENTED

AN IMPROVED TURNBUCKLE WITH NEW AND EXCLUSIVE FEATURES

The United Shutter Turnbuckle is characterized by the bronze back-spring which is an exclusive and fully patented feature.

This spring is made of flat phosphor spring bronze and is designed to hold the shutter firmly against the turnbuckle to prevent rattle.

Finish
Art black - all iron parts are Cadmium plated before finishing coat is applied.

Made also in solid brass or bronze.

9-35 Braintree Street
(ALLSTON STATION), BOSTON MASS.

Products

RYAN AUTOMATIC DOOR RELEASE for Fire Doors of schools, hospitals and public buildings.

RYAN CONCEALED TRANSMOM OPERATOR for installation in Steel or Wood Door Casings.

Also Ornamental Iron and Bronze; Wrought Iron Specialties.

Ryan Concealed Transom Operator (Patent Pending)

The Ryan Concealed Transom Operator may be installed in wood or steel door casings, to operate

Detail of Ryan Concealed Transom Operator

transoms of any size, either top, bottom or center pivoted.

Details—The only visible parts are the bronze handle and escutcheons. The handle operates and automatically locks the transom at any desired opening up to 45 degrees and is guaranteed to open and close the heaviest transom at the slightest turn of the handle.

Construction—Built of cold rolled steel; bronze base plates and bushings; gear and worm are machine cut. Cold rolled steel parts are in gray duco finish.

Twenty-year Guarantee—We guarantee to assume any expense involved, due to any fault of the Ryan Concealed Transom Operator, over a period of twenty years. In extraordinary conditions, where our standard transom operator cannot be used we will alter the operator to meet conditions.

Net Price—\$7.00.

Ryan Automatic Door Release (Patent Pending)

The Ryan Automatic Door Release may be installed on doors opening at either 180 or 90 degrees. It was primarily designed for use on fire doors of schools, hospitals and public buildings and will automatically close all fire doors throughout the building when the fire alarm is rung, or when a sprinkler head goes off. It will allow the

Detail of Ryan Automatic Door Release

fire doors to be left open if so desired for ventilating, or any other purpose.

Details—The device allows the door to function as an ordinary swinging door, or it may be held open by engaging the latch with the keeper, and may be closed again by hand by disengaging the latch. If the fire alarm rings, all doors that may, at that time, be in open position will automatically be released and closed by either spring hinges or door checks.

Construction Features—The Ryan Automatic Door Release is built absolutely foolproof and watertight. The special bronze bumper will eliminate slamming and noise. The installation is simple and inexpensive.

Approval—The device has the approval and indorsement of school boards and has already been installed in public schools.

Net Price—\$25.00.

GLYNN-JOHNSON CORPORATION

Manufacturers of Door Holding Equipment

LAPORTE, INDIANA

ARISTOCRAT OVERHEAD DOOR HOLDER AND SHOCK ABSORBER

The Aristocrat Overhead Door Holder and Shock Absorber is an attractive, neat and unobtrusive device specially designed for entrance vestibule and exit doors.

In addition to its mechanical precision, it has an exclusive hold open feature. Doors can be held open at any angle up

to 125°. Also prevents doors from swinging beyond a given point.

An encased shock absorber of recoil action absorbs the slam, eliminating stress and strain on the door or loosening of butt plates.

This device will also work with overhead door checks or closers.

Holders can be furnished without hold open adjustment if desired.

Cast bronze bearings and fittings with rustproof, triple-plated, malleable arms. Polished or brushed—bronze or brass. Special finishes on request. Also manufactured of cast phosphor bronze.

Type 01, for narrow doors up to 28 in. wide.

Type 02, for doors from 30 to 36 in. wide.

Type 03, for doors over 36 in. wide.

HERCULES DOOR HOLDER

Any door will stay where you want it when you use the Hercules. No springs or mechanisms to get out of order. Self-adjusting, troubleproof and silent in operation. Easily operated by raising or lowering tip of holder with foot. Threaded-in rubber tip acts as a non-skid shoe which grips floor surface. Will not cut ring in floor or mar floor coverings. Tips can be replaced without removing holder from door.

Made of cast bronze or brass, polished or satin finish; in three sizes.

Type No. 3, for light inside doors with ½ in. or less floor clearance.

Type No. 4, for doors with 2 in. or less floor clearance.

Type No. 5, for doors with 3½ in. or less floor clearance.

Size numbers indicate inches of arm length.

The cross section illustrates the threaded-in feature of the Hercules rubber tip non-skid shoe. The ample shoulder acts as an additional support to prevent the tip from being forced or kicked out of the holder. The tip may be easily renewed without removing the device. The threaded-in rubber tip is an exclusive Glynn-Johnson feature.

(Patent Pending)

SEMI-AUTOMATIC DOOR HOLDER AND BUMPER

A door holder and bumper of sturdy bronze construction. Semi-automatic in its operation and serves as a door holder

or bumper at the will of the operator. Has an encased brass plunger which absorbs the shock of a slamming door. The extension on the bottom of the hook acts as a strike plate. This holder will not twist or turn out of alignment.

Supplied with ½-in. diameter steel stud and expansion shield or mounting block for embedding in concrete. Also furnished with 6 in. riser base for doors swinging over a step.

Cast bronze or brass; polished or satin finish.

Types—Door Holders for Concrete Floors—Type F-9: height, 3¼ in.; height to center, 2½ in.; width over all (hook

engaged), 3¼ in.; base diameter, 2¾ in. Equipped with ½-in. steel stud and expansion shield.

Type F-10: height, 5 in.; height to center of plunger, 3½ in.; width over all (hook engaged), 4½ in.; base diameter, 5 in. Equipped with ¾-in. steel stud and double expansion shield. Weight, 6 lb.

For Wood Floors—

Type F-8: height, 3¼ in.; height to center of plunger, 2½ in.; width over all (hook engaged), 3¼ in.; base diameter, 2¾ in.

**Type F-9CB
Concrete Mounting
Block**

Height, 3½ in.
Base diameter, 2¾ in.
To be inserted in concrete

**Type F-9R6
Special Base Riser**

Height 6 in.
Base diameter 6 in.
To be used for special installations where the door swings over a step

INVISIBLE LATCH

The Invisible Latch is designed for neatness of trim, eliminating knobs and pulls. Gives quick, lively action and is so designed that it may be fitted to all types of secret doors and panels. Wall space that has not been utilized heretofore now can be made to provide more closet or compartment space—Give More Room—for any number of articles without showing any hardware to mar the appearance of the panel.

The Invisible Latch will operate in any position, left or right-hand, top or bottom. It may be set in flush or on top of stop, or bottom of shelf. Manufactured of cast brass.

With the template, which is supplied with each device, accurate installation of the invisible latch is assured. It is absolutely jamproof, having only two moving parts, with

plunger action free and independent of the locking and releasing feature. It is not affected by shrinking or swelling of doors or panels so long as the door can be opened and shut. The door or panel, on which it is installed, moves but $\frac{3}{8}$ in. to release.

For regulating the tension of the plunger, to accommodate various sizes and weights of doors and panels, a screw at the back of the latch (shown in the illustration) regulates the action. To operate, simply a light push locks it—a slightly harder push releases the latch.

Type A: for the smallest panels up to cabinets and closet doors. Height, $1\frac{1}{8}$ in.; width, $1\frac{1}{4}$ in.; thickness, $\frac{1}{8}$ in.

Type B: for installation on medium and large doors. Height, $2\frac{3}{8}$ in.; width, $1\frac{1}{4}$ in.; thickness, $\frac{1}{2}$ in.

DOOR HOLDERS AND BUMPERS WITH STRIKE PLATE HOOKS

These attractive, new and graceful designs provide door bumpers and holders of greatest efficiency and long life.

A glance at the illustration of Type F-20 shows the supporting feature of the "prop" design, which means rugged strength and absolute rigidity. There is no side thrust, because when functioning as a holder there is a straight forward pull, no breaking of hooks. As a bumper there is a straight forward contact. The shock is quietly absorbed by the exclusive feature of the threaded-in, loss-proof rubber tip.

The special designed hook plate does not protrude, and when not engaged acts as a strike plate, protecting the door.

Type W-20 also shows how effectively the above features are incorporated in the wall type door bumper and holder.

Wall Type W-20 and W-20x

Floor Type F-20 and F-20x

Wall Type W-20 and W-20x—Projection, over-all length, $3\frac{1}{2}$ in.; over-all length with hook engaged, 4 in.; base diameter, $2\frac{3}{8}$ in.

Type W-20, wood screws.

Type W-20x, for stone. Equipped with $\frac{1}{8}$ -in. steel stud and expansion shield. Strike plate and hook: height, $2\frac{1}{8}$ in.; width, 1 in.; thickness, $\frac{3}{8}$ in.

Threaded steel studs of any length can be furnished for anchoring through marble.

Cast bronze or brass; polished or satin finish. Special finishes on request.

Floor Type F-20 and F-20x—

Height, 3 in.; height to center of bumper, $2\frac{3}{8}$ in.; base, $2\frac{7}{8} \times 2\frac{1}{2}$ in.

Type F-20, wood screws.

Type F-20x, for concrete. Equipped with $\frac{1}{8}$ -in. steel stud and double expansion shield. Strike plate and hook: height, $2\frac{1}{8}$ in.; width, 1 in.; thickness, $\frac{3}{8}$ in.

Cast bronze or brass; polished or satin finish.

DOOR STOPS AND BUMPERS (WALL TYPE—FLOOR TYPE)

Both of these neatly designed door stops and bumpers are ruggedly constructed for longest life and most satisfactory service and are built to provide proper anchorage where it is most needed. Equipped with an exclusive threaded-in rubber tip with shoulder support, preventing loss by being kicked or pulled out.

The cross section illustrates the threaded-in rubber tip feature. An ample shoulder acts as an additional support to prevent the tip from being forced or kicked out of the device.

It eliminates the common annoyance on ordinary devices where tips are merely pinned, snapped or glued on. The

threaded-in rubber tip is an exclusive Glynn-Johnson feature.

Wall Type—Projection, $2\frac{3}{4}$ in. Type WB-3, wood screws.

Type WB-3x: $\frac{1}{8}$ -in. steel stud and expansion shield. Cast bronze or brass; polished or satin finish.

Regular type wall bumpers with threaded-in rubber tip furnished in all lengths.

Floor Type—Type FB-18, wood screws; height, $2\frac{1}{8}$ in. Type FB-20 wood screws;

height, $3\frac{1}{4}$ in. Type FB-20x: height, $3\frac{1}{4}$ in.;

equipped with $\frac{1}{8}$ -in. steel and double expansion shield.

Cast bronze or brass; polished or satin finish.

Wall Type WB-3

(Patent Pending)

Floor Type FB-18

INTERFERING TWO-DOOR ROLLER BUMPER

For installation when two doors open back to back to prevent interlocking or clashing together and marring the knobs or door handles. It also serves to close an interfering door.

Made of cast bronze or brass, polished or satin finish. Rubber roller equipped with brass bushing.

Type RB-4: length, 4 in. over all.

Type RB-7: length, 6 in. over all.

For information on complete line of door holding devices, write factory

THE CONDOR COMPANY

Manufacturers of Concealed Door Closers

58 Sutter Street
SAN FRANCISCO, CALIF.

The Product

A door check that is concealed from view and operates satisfactorily has for years been the wish of architects and constructors of fine buildings. Such a door check is the Condor. It is invisible—does not mar the beauty of the room—does not collect dust. It can be installed in many places where the overhead check cannot be used satisfactorily, such as doors with round tops, half doors, wickets.

Advantages

It Is Concealed from

View—Both check and closer fit into the door stile, consequently are entirely concealed from view when the door is closed.

It Is Sturdy and Will Last—An endurance test under normal conditions and under the supervision of Robert W. Hunt & Company, showed a successful operation of over 300,000 times without breakdown, repairs or adjustments.

It Is Readily Installed by a Carpenter—It is easily adjusted for varying conditions.

Price—The price is in line with other closers.

Successful Operation—The Condor Check may be installed in any type of metal or wood door having sufficient width of stile, and will operate successfully under practically all draft conditions.

Phantom View of Installation and Operation Details

Operations of the Condor Door Closer

The action of the Condor Check is positive and the adjustment is simple. Any degree of closing speed may be obtained by a slight turn of either or both adjustment screws "C" and "A." The door is under checking control through an arc of from 64° to 84° of opening, depending upon the size butt used. As either of these angles is the normal opening of a door in general use, the door is under checking control practically at all times. If the door should

be opened beyond this limit and released, the force of contact between piston and stud is absorbed by the action of "C" passage, after which the "A" passage functions until the door closes. It is advisable to use the small butt if possible for each model, as wider control is obtained. Doors equipped with the Condor Check may be operated to the full 180° opening.

New Installations

In new installations it is advisable to have the doors mortised both for the check and closer, at the factory. Templates are furnished by THE CONDOR COMPANY for this purpose.

Additional Information

For catalogue and other descriptive literature, together with prices, name of nearest distributor and other information, address home office as above.

Organization, Facilities and Distribution

The NORTON DOOR CLOSER Co. has specialized in the design and manufacture of door closers for more than 50 years. The experience gained over this long period of time and the organization that has been welded together is an assurance of continual leadership in the door closer field.

A thoroughly modern one-product plant with a daily capacity large enough to assure immediate filling of the

largest orders. Throughout the United States are branch offices and representatives for the distribution of Norton Closers.

Service

A service department is maintained which is available at all times for advice and consultation. Should an architect desire special information relative to door closers, the NORTON DOOR CLOSER Co. will be pleased to send one of its representatives. *In cases of need, door closers and brackets are designed and built special.*

Upon request, after Norton Closers are installed, a special inspection by a competent man, who thoroughly understands closers, latches, etc., will be made.

Guarantee

The NORTON DOOR CLOSER Co. guarantees its door closers for two years. If closers are used of the proper size to handle the doors, the company guarantees the perfect working of the closers, and any defects in workmanship and material will be made good.

Norton Door Closer of the Rack and Pinion Style

The Norton Door Closer operates by a rack and against a head of liquid. It can be used on either pinion—the rack, a double headed piston, moving side of the door and the spring mechanism is reversible. When used on the hinge side of door, the closer is placed on door; if used on opposite side of door, it is necessary to have a bracket to hold the closer. (Various brackets shown on second page following.)

The Norton Door Closer embodies several distinctive features both in construction and operation.

Exclusive Construction Features—

Steel Piston Rack—The piston rack is made of steel, eliminating all possibility of warping and binding, which frequently occurs if made of cast iron. The wear is also reduced to a minimum assuring long life and perfect checking control

under all conditions. *The Norton Door Closer is manufactured with a steel piston rack.*

Steel Attachment Plate—Another unique feature of the Norton is the method of construction of that part of the closer which is fastened to the door. Instead of being made of gray iron, cast as an integral part of the shell and consequently easily broken, this part of the Norton Closer is made separately from the shell of *drop-forged steel* which has great strength and will not break.

Steel End Plugs—The end plugs used to seal the ends of the piston, or liquid, chamber, are made of steel. This allows of great precision in their manufacture and eliminates the possibility of defects such as exist when they are made of gray iron. *Norton Closers never leak at this point.*

Norton Door Closer

Liquid Chamber

Operation of the Norton Door Closer—

Absolute Control—Norton Closers absolutely control the door from the start to the finish of closing, maintaining an even speed and allowing no headway to be suddenly checked. This full control can only be obtained with a rack and pinion type of closer and is necessary to reduce the strain on the hinges to a minimum.

Two Speeds in Closing—A two-speed control that allows for one speed of the door to within a few inches of the jamb and another speed right at the latch. The first speed is adjustable from two seconds to two minutes and the second speed giving either a quick release to overcome a stiff electric latch or extra quiet closing as is needed in hospitals, etc.

Back Check—The Norton Closer can be arranged to check the opening movement of the door when necessary to prevent it from slamming against a wall, or in a battery of doors to prevent slamming where the doors open back to back.

Holder Device—

The Norton Automatic Holder Arm eliminates all floor stops, hooks, blocks or other devices used for holding the door open. It is located at the joint of the arms and is used in conjunction with the Norton Door Closer. The device may be adjusted to hold the door in any desired position. It is positive in action and may be released by a slight push or pull on the door.

Illustration—

The illustration above shows how this positive control of the door by a Norton Closer is obtained. In closing the door up to the latch, the liquid escapes through the first port. In closing at the latch the liquid

escapes through the second port—both ports controlled by one regulating screw.

Table of Sizes—

Norton Closers are made in six sizes to suit different size doors and different draft conditions. The following recommendations are for regular conditions. When considerable wind pressure has to be overcome a size larger closer than specified should be used.

Size A—For light inside doors.

Size B—For doors 2 ft. 6 in. x 7 ft.

Size C—For inside doors 3 ft. x 7 ft.

Size D—For heavy inside or light outside doors not over 3 ft. x 7 ft.

Size E—For heavy outside doors not over 3 ft. x 7 ft.

Size F—For extra heavy outside doors.

Special Finishes—

All closers are regularly furnished in a gold bronze finish. They can be supplied in a maroon bronze, silver bronze, or a dead black finish at no additional cost.

Closers can be furnished on a special order in any finish desired to conform with that of the remaining items of hardware.

Improved Design Shaft and Packing Nut—

There are five objects to be obtained in this shaft and packing nut used in the 1930 Model Norton Door Closer.

- (1) To prevent liquid from escaping from the liquid chamber to spring chamber.
- (2) To reduce friction on the shaft.
- (3) To get a long bearing to prevent wear.
- (4) To provide lubrication for the shaft.
- (5) To be able to adjust packing to take up the wear.

Improved Design Shaft and Packing Nut Used in the 1930 Model Norton Door Closer

Fusible Link Door Closers

Norton Fusible Link Door Closers Style No. 1— Fusible link closer for use on doors that swing on hinges. Approved by National Board of Fire Underwriters' Laboratories.

The three larger sizes of Norton Closers—sizes D, E, and F—are used with the addition of hold open arms and an auxiliary spring. The auxiliary spring has two functions: first, to hold door open at angle of about 100°; second, when fuse link breaks, to increase shutting power at latch. Both main and auxiliary springs are adjustable and can be so set that in usual door operation ordinary spring power can be used. Upon fire causing link to fuse, the leverage of the arms is changed increasing the closing power at the latch

by 10 lb., insuring closing of door and engaging of latch.

The fusible link is placed in the doorway where it would get the most heat in case of fire. The link fuses at 160° F. and the door is immediately closed.

The fusible link closer can be attached to hinged side of door only.

In ordering, specify size and hand of door.

Style No. 3—Norton Closers, size C, D, E and F with holder arm, and the addition of fusible link for use on hinged doors, opening on angle not over 100°. Link fuses at 160° F. and door closes immediately. Can be used on hinged side of door or on opposite side from hinge with bracket, turning arms upside down.

Style No. 1

Style No. 3

Norton Brackets for Use When Closer Is Used on Side of Door Opposite Hinge

Soffit Bracket—Used where there is room on overhead jamb. This bracket places closer in the proper position.

Corner Bracket—Used where door has to open 180° or when headroom is low.

Adjustable Bracket—For circular top doors when closer is placed on opposite the hinge side of door.

Flush Bracket—When soffit (or jamb) is not wide enough to use soffit bracket.

Offset Bracket—For circular top door when closer is placed on the hinge side of the door.

Special Brackets—Special brackets made to order.

Norton Telephone and Coupon Booth Door Devices

Door Holder—Will hold door open about 4 in. Bracket on door and balanced latch attached to casing about 4 in. from edge of door. To operate, open door slowly until latch engages bracket. To release, open door. Regular B closer to be used.

Norton Booth Door Holder Used with Regular B Closer

Combination Door Holder and Closer—Regular B closer used with holder built in. Will close the door to within 4 in. of the latch and hold it in that position for ventilation. When booth is in use, the door can be pulled shut.

Norton Door Closer with Holder Built In

Norton Sliding Gate Closer for Sliding Gates or Doors

A positive closer for sliding doors, such as bank cage grill doors where it is necessary for door to close and lock every time it is opened.

Made in two sizes, right and left hand, black finish.

No. 1, for light grille gates, 2 to 3 ft. wide.

No. 2, for doors and heavy bar gates, 2 to 3 ft. wide.

In ordering, give size of closer, width and hand of door, style of track.

Left Hand Door

Right Hand Door

Norton Automatic Friction Sash and Door Holders

Sash Friction Stay No. 0—Used on casement windows not over 2 ft. wide. Can be installed either at the top or bottom and either right or left hand. Regular finish is sherardized. Distance A is $4\frac{1}{2}$ in.

Door Holder and Friction Stay

Door Holders No. 1 and No. 2—For use on hinged windows and light doors. No. 1, for windows and small doors 2 ft. wide; No. 2, for windows and doors 3x7 ft. Finished in Norton maroon bronze.

To open 90° , A will be 6 in. for No. 1 and 9 in. for No. 2. To open 180° , A will be $4\frac{1}{2}$ in. for No. 1 and 6 in. for No. 2.

In ordering give size and hand of door.

Garage Door Holders No. 3 and No. 4—For garage doors only. Made right and left hand.

No. 3 for door 4x8 ft.; No. 4 for doors up to 5x10 ft. Finished in Norton maroon bronze.

In ordering garage door holders give size and hand of door.

Garage Door Holder Nos. 3 and 4

TO OPEN 90°

Size No.	A, in.	B, in.
3	9	10
4	12	12

Norton Holder Arm with Soffit Post Bracket

Holder for use on standing door of a pair of doors to match and look like operating door with regular holder arm attached to a soffit post bracket. Can

be furnished to apply on hinged side of door if desired.

In ordering, give size and hand of door. Also state if bracket is to be used.

Holder Arm with Soffit Post Bracket

Door with Holder Arm—Door with Closer

No. 4 Norton Screen Door Closer

Door closer specially designed for light screen doors. Can be used where space between door is only 2 in. Used on either side of door without change of brackets. Adjustable spring. Right or left hand. Can be installed or removed in few minutes.

No. 4 Norton Screen Door Closer

**How to Install the Norton Door Closer on Doors That Open 100° Only—
For Regular and Holder Arm Closers**

First—

(1) Screw the closer on the door high enough so the arm will clear the door in opening, and out the correct distance from hinge as shown or, if a bracket is used, screw it to the overhead jamb as close as possible to the door and out the correct distance.

(2) Screw the fore arm shoe to the casing, or door, the correct distance as shown.

(3) Place arm on shaft. If universal holder arm is used, on a right-hand closer adjusting nut "X" should be on underside of arm. If left-hand closer, adjusting nut "X" should be on top. Leave the main arm at right angles to the door when closed and tighten setscrew "Z."

(4) Screw the nut down *tight* on top of shaft.

Second—

Wind the spring 6 or 7 notches except for doors opening out when 3 or 4 notches will suffice. *Be sure spring is not wound wrong way.* For right-hand closer wind spring anticlockwise. Left-hand closer wind spring clockwise. The *hand* of a closer can be determined by the position of the coil hooks at the back of the cover.

(It is necessary to use a bracket)

Third—

(1) *To regulate closing, use only the screw nearest the hinge of the door.*

(2) Turn this screw in several turns, leaving screwdriver slot in a vertical position, until door comes to a solid stop, about 6 in. from the jamb. Then turn the screw just a little either to the right or left until the speed is right at the latch.

Note: If door still closes too rapidly, one or two complete turns, leaving the screw adjusted as above (Third, No. 2), will correct this.

Fourth—

To adjust arm, open door to where it is to stop and tighten nut "X." A push or pull on the door will set or release the arm.

Fifth—

To change the hand of a closer remove arm, ratchet and cover. Turn the spring over. Revolve the shaft or spindle one-half turn. Replace parts. Replace holder arm as per directions above. (First, No. 3.)

Product

L. C. N. DOOR CLOSERS—a complete line of closers, including Overhead Types, Concealed Floor Types, and Screen Door Types in a complete range of sizes and finishes.

Construction and Operation

L. C. N. Door Closers represent the most advanced developments of the NORTON LASIER COMPANY. The president of this Company, L. C. Norton, invented the first of all door checks in 1880 and has devoted each year since to developing and perfecting door closers of all types. The present-day L. C. N. Closer sums up all that this long experience has proven correct.

The outstanding features of L. C. N. Overhead Closers are clearly illustrated in the accompanying sectional views. The coil, made from special analysis high carbon steel, exerts a powerful closing force against a liquid cushion which acts as a checking medium. The coil is designed with a large outside and inside diameter, giving more power and flexibility. It is wound on an extra large ratchet sleeve, allowing all parts of the coil to begin work the instant the door starts to open. This prevents breakage and greatly increases the life of the spring.

Sectional View of Closer

Showing large spring housing, sturdy rack and pinion construction, and three-point bearing

two complete turns of the screw automatically place the closer in proper adjustment. The opening speed can also be controlled by means of the opposite regulating screw in connection with the double headed piston.

Detail of Shaft, Pinion, Bearings and Packing

The shaft (1) is of triple-bearing frictionless design, highly polished, and will last for the life of the closer. The packing (5) is placed between the shaft bearing nut (3) and a large bearing below it. It is held tight by the packing gland nut (4). An air chamber (6) controls excess liquid. The liquid flows back to piston chamber through outlet (7). The pinion (8) and rack are made of high grade steel with heavy cut teeth.

The hold-open feature, located at the ends of the arms, is exceedingly simple to operate and has no springs to break or lugs to wear out. It is designed on the cam principle and built on a center line. The closer is universal, and uniform in appearance for right or left-hand doors, making it foolproof.

The general design of the closer has been worked out so that it presents a very pleas-

ing appearance to the eye. The finish is a two-coat lacquer, guaranteed to resist rust, and is easily kept clean. The materials contained in the makeup of this closer are of the highest quality and the workmanship is of the best.

Types and Finishes

L. C. N. Closers are made in both overhead and concealed types. Included in the overhead line is the L. C. N. Telephone Booth Closer which closes the door to within 4 in. of the latch. The overhead closer is also made within a fusible link as illus-

Fusible Link Closer

trated. The L. C. N. Concealed floor level door closer has fulfilled a long felt want from an architectural standpoint. It is entirely concealed in the floor and is a powerful and efficient device for closing and controlling single and double acting doors. The general principle of the concealed closer is similar to that shown in the sectional view of the overhead closer.

Finishes of the L. C. N. Overhead Closer include gold bronze, silver bronze, dead black, bronze plate (polished and unpolished), nickel plate, statuary bronze, genuine bower barff, and special finishes to match samples submitted.

Concealed closers are furnished with exposed parts in all standard hardware finishes.

Standard L.C.N. Overhead Closer with Hold-open Feature

Thoroughly Tested

L. C. N. Closers have been adopted as standard equipment throughout in some of the architectural landmarks of America—such as the Penobscot Building, Detroit, Terminal Tower Building, Cleveland, Board of Trade Building, Chicago, and other prominent buildings.

Data and Service

The L. C. N. Catalog contains complete description and data covering sizes, types, and prices. All contract installations will be adjusted by our service department. Closers are positively guaranteed to operate and control doors satisfactorily for two years. Regular type is tested and approved for fire doors by National Board of Fire Underwriters' Laboratories. Our nearest representative will be glad to supply facts and any special data you may require.

The Company and Its Reputation

For more than 25 years THE OSCAR C. RIXSON COMPANY has been engaged in the manufacture of improved mechanisms in builders' hardware, including floor checks, door checks, casement hardware, hinges, etc. These products have been specified and used on thousands of jobs, ranging from the moderate cost residence to the largest and most expensive types of apartment, hospital, hotel, office and monumental buildings.

Rixson Hardware Represents Quality and Practicability

The best obtainable materials are used in the manufacture of Rixson Hardware Specialties, many of which are protected by patents. Their quality and the ease with which they are installed at the job, make them welcome to both the architect and the contractor. Rixson records of long lived service assure you of that dependability which other users know so well.

Rixson Service to Architects

Representatives of THE OSCAR C. RIXSON COMPANY are fully qualified and willing to furnish every possible assistance and co-operation to architects, builders, etc. You are invited to make use of this co-operation.

Our Engineering, Designing and Service Departments at the home office are also at your disposal and

will gladly assist in the solution of special problems.

The Purpose of This Catalogue

In the following pages THE OSCAR C. RIXSON COMPANY presents concise information concerning the Rixson Floor Checks, Door Stays and Holders, Hinges and Casement Hardware. This information is presented in such manner that both detail drawings and specifications may easily be prepared therefrom, with a good idea of cost of items desired.

The Hand of Doors

In handing Rixson devices we have established the following rule: facing a door swinging away from you—if it opens to the right hand it is a right-hand door—if it opens to the left hand it is a left-hand door. See diagram below.

RIXSON SINGLE AND DOUBLE ACTING FLOOR CHECKS

For nearly a quarter of a century this Company has been successful manufacturers of floor checks and consequently Rixson Floor Checks have become a by-word wherever a closing device is considered for the better class of entrance, vestibule and interior doors. To substantiate the above it is only necessary to consider the thousands of office buildings, monumental structures, stores of all kinds, from the most pretentious to the ordinary, as well as the countless thousands of residences where Rixson Floor Checks are on duty at all times closing doors innumerable

times daily without the slightest attention. This bears witness to the "In-built Quality" of Rixson Products.

As types of buildings change and new conditions present themselves this company is always found studying these changed conditions trying to meet them with "Rixson Quality" Products. This company will never present an article not measuring up to "Rixson Standard" and even though a device becomes obsolete we will always endeavor to maintain a service on it. This should be considered when specifying as it assures permanent satisfaction.

NOTE: Architects are urged to specify by name and number assuring Genuine Rixson Products.

A SUGGESTED SPECIFICATION FOR FLOOR CHECKS

(1) All exterior and vestibule double acting doors shall be provided with Rixson Double Acting Floor Check—

No. 30 for doors not over 2 ft. 10 in. wide.

No. 40 for doors not over 3 ft. 6 in. wide.

(2) Interior double acting doors unless otherwise mentioned shall be provided with Rixson Double Acting Floor Check—

No. 10 for doors not over 2 ft. 8 in. wide.

No. 15 for doors not over 3 ft. wide

(Where hold-open feature is wanted.)

No. 12 for doors not over 2 ft. 8 in. wide.

No. 16 for doors not over 3 ft. wide.

(Where doors are not wanted with hold-open feature.)

(2A) Interior double acting doors as called for on plans and in details shall be provided with Rixson Double Acting Floor Check No. 30.

(This specification for interior doors subject to severe use or of such size that Nos. 10-12, 15-16 would not be suitable.)

(3) All exterior and vestibule single acting doors shall be provided with Rixson Single Acting Floor Check—

No. 20, 120 or 21 as called for in details for doors not over 2 ft. 8 in. wide.

No. 25, 125 or 26 as called for in details for doors not over 3 ft. 6 in. wide.

(4) All exterior and vestibule doors shall be provided with Rixson Door Stay and Holder No. 38 in bronze metal of correct size.

(5) All interior single acting self-closing doors shall be provided with Rixson Single Acting Floor Check—

No. 18 or 18½ (as required by detail) for ordinary doors not over 3 ft. wide.

(6) Interior single acting self-closing doors as called for on plans and in details shall be provided with Rixson Single Acting Floor Check—

No. 20 or 21.

(This specification for doors over 3 ft. wide or subject to severe use where No. 18 or 18½ would not be suitable.)

Note: See Plates Nos. 10 and 11 for Architectural Bronze and Aluminum Thresholds designed for use with Rixson Floor Checks.

SPECIFICATION DATA FOR FLOOR CHECKS

Plate 1

SINGLE ACTING FLOOR CHECK

NO. 18—OFFSET TYPE (PATENTED)

For Interior Doors

Note: No. 18 recommended for use with interior, single acting, self-closing doors not over 3 ft. wide.

For interior doors over 3 ft. wide or doors subject to severe use, Rixson Single Acting Floor Check No. 20 is recommended.

This check is patterned after the Rixson Nos. 20 and 25 Single Acting Floor Checks which have proven their ability to furnish highly satisfactory service for entrance and vestibule doors over a period of many years. (See following page.)

Like the larger (Nos. 20 and 25) models, the No. 18 check is built of the best grade forgings, castings, etc., and offers equally satisfactory service in operation.

Special pivot No. 19 should be specified as an intermediate pivot for doors 8 ft. high or over. Segment head doors require special pivot No. 19 in place of regular top pivot.

See illustrations below for construction details, dimensional drawings, etc.

PRICE LIST RIXSON NO. 18 SINGLE ACTING FLOOR CHECK

No.		Each
18	With dull or polished brass or bronze floor plate and malleable iron top pivot and steel arm cap primed for paint.....	\$21.00
18	With dull or polished brass or bronze floor plate, bronze top pivot and arm cap.....	24.00

For ordinary plated finishes, except as noted below, add \$1.00.

For chromium and verd antique, add \$3.00.

For white metal floor plate, top pivot and arm cap, add \$3.00.

Gold and silver plating, price on application.

For No. 19 pivot in addition to regular top pivot, add \$5.00.

No. 19 pivot furnished in place of bronze top pivot for segment head doors at no additional cost.

The above prices include cement blocks.

Dull brass furnished unless otherwise ordered.

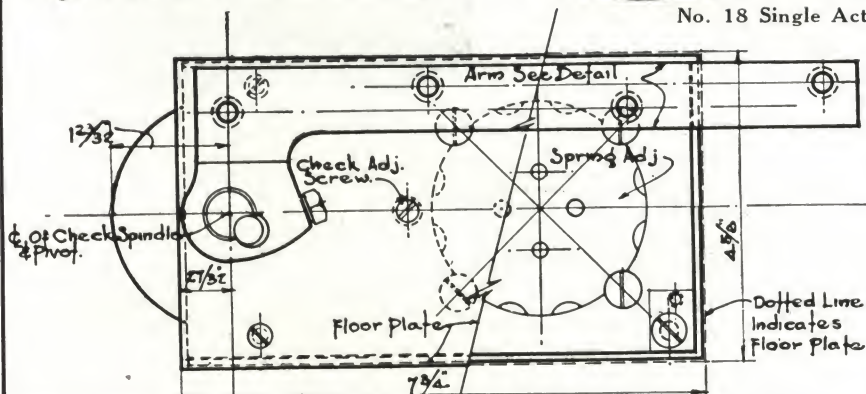

See plate No. 1 for suggested specification for floor check.

When ordering state hand. (See first page regarding hand.)

RIXSON
COMPANY

FLOOR CHECK—SINGLE ACTING—OFFSET TYPE
For Interior Doors

Plate 2

SINGLE ACTING FLOOR CHECKS

NO. 20 AND NO. 25—OFFSET TYPE (PATENTED)

For Entrance and Vestibule Doors

Note: No. 20 is recommended for use with exterior and vestibule single acting doors not over 2 ft. 8 in. wide. Also used for the heavier and larger interior doors for which Nos. 18 and 18½ are not suitable.

No. 25 is recommended for exterior and vestibule single acting doors not over 3 ft. 6 in. wide.

Rixson Single Acting Floor Checks Nos. 20 and 25 permit entrance and vestibule doors to open all the way back (180 degrees) and will close the doors from that point. To meet varying conditions the spring power is adjustable (see drawing below) so as to secure any desired spring tension. The whole device is filled with Rixson Checking Fluid, which has high lubricating qualities and will not freeze at 40 degrees below zero. The top pivot is made of special, tough, hard bronze and the pivot-bolt is of case-hardened steel.

Should the door drag on the threshold or on the head jamb, the connection between the drop-forged steel arm on which the door rests and the spindle of the device is such that the door can be raised or lowered at any time. The value of this adjustment feature is readily appreciated.

Cast metal doors weighing 475 lb. have been mounted on this floor check with entire satisfaction because the weight of the door comes on a drop-forged and case-hardened steel spindle which is supported in the device on ten ¼-in. ball bearings which run in a case-hardened ball race.

Special pivot No. 19 should be specified as an intermediate pivot for doors 8 ft. high or over. Segment head doors require special pivot No. 19 in place of regular top pivot.

PRICE LIST RIXSON NOS. 20 AND 25 SINGLE ACTING FLOOR CHECKS

No.	Description	Each
20	For vestibule doors and for outside doors not over 2 ft. 8 in. x 8 ft. dull or polished brass or bronze.....	\$30.00
25	For large vestibule doors and for outside doors not over 3 ft. 6 in. x 8 ft. dull or polished brass or bronze.....	38.00
19	Intermediate pivot.....	4.50

For ordinary plated finishes other than noted below, add \$1.00.

For chromium and verd antique, add \$3.00.

For white metal floor plates and pivots, add \$4.00.

Gold and silver plating price on application.

Above prices include cement cases and regular top pivot or No. 19 pivot in place of regular pivot.

Packed with wood screws unless otherwise ordered.

Finish, dull brass unless otherwise specified.

See Plate No. 1 for suggested specification for floor checks.

In ordering state hand wanted. (See first page regarding hand.)

Can be supplied with Hold-open feature when so ordered. State degree of Hold-open.

FLOOR CHECKS—SINGLE ACTING—OFFSET TYPE
For Entrance and Vestibule Doors

Plate 3

SINGLE ACTING FLOOR CHECKS NO. 120 AND NO. 125

OFFSET TYPE (PATENTED)

For Entrance and Vestibule Doors

On heavy doors and on doors where the vertical adjustment afforded by the regular No. 20 and No. 25 floor checks is not desirable Rixson No. 120 and No. 125 serves a very definite purpose as the door cannot drop down on the spindle of the check and ride on the threshold. The spindle of floor checks No. 120 and No. 125 is tapered as in the single acting floor checks Nos. 21 and 26 and double acting floor checks Nos. 30 and 40 and a specially designed arm fits snugly upon it. The entire weight of the door must rest upon the spindle of the check.

The regular ball bearing top pivot as furnished

with No. 20 and No. 25 floor checks (see Plate 3) is used with these checks and when advisable the Rixson Intermediate Pivot No. 19 (Plate 3) can be used but the pivot pin must be retracted so that no part of the weight of the door rests upon it.

When regular top pivot is used this check is also suitable for doors of a minimum thickness of $1\frac{3}{8}$ in. When No. 19 side pivot is used minimum thickness of door can be $1\frac{1}{2}$ in.

Price same as No. 20 and No. 25, respectively.

Can be supplied with Hold-open feature when so ordered. State degree of Hold-open.

FLOOR CHECKS—SINGLE ACTING—OFFSET TYPE
 For Entrance and Vestibule Doors

Plate 4

SINGLE ACTING FLOOR CHECK

NO. 18½—CENTER HUNG TYPE (PATENTED)

For Interior Doors and Office Rail Gates

Note: No. 18½ is recommended for use with interior single acting, self-closing doors not over 3 ft. wide.

For interior doors over 3 ft. wide or doors subject to severe use, Rixson Single Acting Floor Check No. 21 is recommended.

The center hung arm design of No. 18½ check eliminates all hardware from either face of the door.

This check is identical in construction to the Rixson No. 18 Single Acting Floor Check (Offset Type) except that it has a centering arm and pivot for use on doors where the offset type of check is not desirable.

FLOOR CHECKS—SINGLE ACTING—CENTER HUNG TYPE
For Interior Doors

Plate 5

SINGLE ACTING FLOOR CHECKS

NO. 21 AND NO. 26—CENTER HUNG TYPE (PATENTED)

For Entrance and Vestibule Doors

Note: No. 21 is recommended for use with exterior and vestibule single acting doors not over 2 ft. 8 in. wide. Also used for the heavier and larger interior doors for which Nos. 18 and 18½ are not suitable.

No. 26 is recommended for exterior and vestibule single acting doors not over 3 ft. 6 in. wide.

Rixson Single Acting Floor Checks Nos. 21 and 26 are suitable for use with entrance and vestibule doors opening to ninety degrees, and for doors without mullions, as shown by drawings below.

By the use of this type of floor check the usual projecting knuckles of the bottom arm and top pivot are eliminated and the floor plate centers under the door.

Floor plates of Nos. 21 and 26 are made to

extend back over the depressed portion of cement case and can be cut to fit jamb at the job.

Operating mechanism is the same as in our Nos. 20 and 25, respectively, the only difference being in the manner of application.

PRICE LIST RIXSON NOS. 21 AND 26 SINGLE ACTING FLOOR CHECKS

No.	Description	Each
21	Dull or polished brass or bronze.....	\$30.00
26	Dull or polished brass or bronze.....	38.00

FLOOR CHECKS—SINGLE ACTING—CENTER HUNG TYPE
For Entrance and Vestibule Doors

Plate 6

SINGLE ACTING FLOOR CHECKS NO. 21 AND NO. 26

CENTER HUNG TYPE (PATENTED)

For Entrance and Vestibule Doors Hung Back to Back

On doors hung back to back without mullions Rixson No. 21 and No. 26 single acting center hung type floor checks with twin cement cases give greater opening width between doors at right angles: a feature very important on theatres, office and public buildings. Installation is very simple. Rabbets and stops can be designed the same as for regular No. 21

and No. 26 floor checks depending on layout of doors.

Due consideration must be given to clearance required for push and pull bars.

Price same as regular No. 21 and No. 26.

Can be supplied with a Hold-open feature effective at 90 degrees when so ordered.

Plate 7

DOUBLE ACTING FLOOR CHECKS

**NO. 10 AND NO. 15 WITH AUTOMATIC HOLDER (PATENTED)
NO. 12 AND NO. 16 WITHOUT AUTOMATIC HOLDER (PATENTED)**

For Interior Doors and Office Rail Gates

Note: For interior, double acting doors not over 2 ft. 8 in. wide, we recommend:

*No. 10 where hold open feature is desired;
No. 12 where hold open feature is not desired.*

For interior, double acting doors over 2 ft. 8 in. wide but not exceeding 3 ft. in width, we recommend:

*No. 15 where hold open feature is desired;
No. 16 where hold open feature is not desired.*

For interior, double acting doors over 3 ft. wide, or interior doors subject to severe use, Rixson Double Acting Floor Check No. 30 is recommended.

Rixson Double Acting Floor Checks Nos. 10, 12, 15 and 16 have been specially designed for pantry doors, gates in office railings, etc. They permit the door to swing in both directions, yet bring it quietly to rest at center without rebound or "flip-flap."

Nos. 10 and 15, when door is opened to 90 degrees, automatically hold the door in that position so that no door holder is required. Nos. 12 and 16 correspond in all respects to Nos. 10 and 15, respectively, *except* that they do not have the automatic door holding feature.

We recommend either brass or bronze natural color finish for floor plates. A cast iron floor box, which we call "cement case," must be used when the check is set in masonry floor. Cement case is furnished only when ordered.

For Office Rail Gates—When ordering for use on office rail gates, prefix the letter "G" to the number (i.e., G-10, G-15, etc.) so that the special bronze rail gate top pivot and arm will be furnished without additional charge. (See detail of G-10 treatment, below.)

PRICE LIST RIXSON NOS. 10, 12, 15 AND 16 DOUBLE ACTING FLOOR CHECKS

No.	Description	Each
10	With automatic holder } For Inside Doors up to 2 ft. 8 in.	
12	No automatic holder } wide	\$15.00
15	With automatic holder } For Inside Doors up to 3 ft.	
16	No automatic holder } wide	18.00

Cement case, fits all four sizes \$1.00.

Above prices are for dull or bright brass or bronze.

For any ordinary plated finish except as noted below, add \$1.00.

For chromium and verd antique, add \$2.00.

For white metal, add \$2.50.

Gold and silver plating, price on application.

See Plate No. 1 for suggested specification for floor checks.

JUNIOR DOUBLE ACTING FLOOR CHECK

For Light Interior Doors Only

Note: Rixson Junior is recommended for use with light interior double swing serving doors not over 2 ft. 8 in. wide.

Rixson Junior has been developed for operating the double swing serving door to pantry or dining room in the moderate cost home. For this service on light doors Rixson Junior will give the same satisfactory service as the larger floor checks, at a considerable saving in cost. Rixson Junior permits the door to swing in both directions, closing it gently without any rebound or "flip-flap."

All wearing parts are of case-hardened steel and are immersed in a lubricating liquid which also serves to check the closing speed of the door. The checking action is regulated by a needle valve which is accessible through the floor plate. An unusually durable compression spring provides the closing power.

Furnished With or Without Automatic Door Holder—When opened to right angle the Rixson Junior will automatically hold the door in that position until released by a slight push. This eliminates the necessity of a separate door holder.

Top Pivot

Elevation of Junior Check

Plan of Junior Check

There are some doors which it is desirable to have "self-closing" at all times; Rixson Junior can be supplied *without* the hold-open feature when desired.

Price is the same for either style.

PRICE LIST RIXSON JUNIOR DOUBLE ACTING FLOOR CHECK

No.	Description	Each
Junior	Dull or polished brass or bronze.....	\$10.00

Ordinary plated finishes except as noted below, add \$1.00.

Chromium and verd antique, add \$2.00.

White metal, add \$2.50.

Gold and silver plating, price on application.

Dull brass furnished unless otherwise ordered.

Cement case, \$1.00.

A cast iron floor box, which we call "cement case" must be used when the check is set in masonry floors. Furnished on order only.

RIXSON

FLOOR CHECKS—DOUBLE ACTING
For Interior Doors

Plate 8

DOUBLE ACTING FLOOR CHECKS

NO. 30 AND NO. 40 (PATENTED)

For Entrance and Vestibule Doors

Note: No. 30 is recommended for use with exterior and vestibule double acting doors not over 2 ft. 10 in. wide. Also used for interior doors subject to severe use, or of such sizes that Nos. 10, 12, 15 and 16 checks would not be suitable.

No. 40 is recommended for exterior and vestibule double acting doors not over 3 ft. 6 in. wide, or on doors subjected to very strong draughts.

Rixson Nos. 30 and 40 Double Acting Floor Checks

Rixson Double Acting Floor Checks Nos. 30 and 40 are designed with two springs and two checks for the following reasons: due to the inrush of air on windy days it takes a great deal of spring power to close the door after it has been opened inward, but it takes very little checking resistance to keep the door from slamming because the wind acts as a check; but when the door is opened outward, the wind tends to close the door, so that very little spring power is required, but a great deal of checking resistance is needed to keep the door from slamming. For these reasons two springs and two checking mechanisms are used in this design, each spring and check being adjustable independently.

The spindle, links and other parts subjected to wear are of drop-forged steel and case hardened. The spindle runs on $\frac{1}{16}$ -in. steel balls and the whole device is filled with our non-freezing checking fluid which possesses high lubricating qualities.

We recommend either brass or bronze, natural color finish for floor plates.

PRICE LIST RIXSON NOS. 30 AND 40 DOUBLE ACTING FLOOR CHECKS

No.	Description	Each
30	For outside doors not over 2 ft. 10 in. x 7 ft. 6 in.....	\$44.00
40	For outside doors not over 3 ft. 6 in. x 7 ft. 6 in.....	60.00

For ordinary plated finishes except as noted below,
add \$1.50.

For chromium and verd antique, add \$3.00

For white metal, add \$4.50.

Gold or silver, price on application.

Above prices include cement case.

Dull brass furnished unless otherwise ordered.

Use No. 40 on doors subjected to heavy draughts.

See Plate No. 1 for suggested specifications for floor checks.

SECTION "A"
When specified with Concrete Anchors — is drilled & sunk along center screws.
When specified with Wood Screws — is drilled & sunk along each edge for 1 1/2" x #12 Oval Head wood screws.

THRESHOLD DETAILS FOR USE WITH RIXSON FLOOR CHECKS

TYPE 5 (Door Hung off Center of Jamb)

B	20"	25"
C	6 1/2"	6 1/2"
D	9 1/2"	10 1/2"

IMPORTANT
The EXACT DISTANCES BETWEEN FINISHED JAMBS (not door stops), and between CHECK SPINDLES and FINISHED JAMBS must be specified. We are NOT RESPONSIBLE if the length ordered does not fit the opening. In setting thresholds, the floor checks and cement cases should be at hand. The entire assembly should be blocked up in the door opening so that the check spindles are properly located and the sections of threshold line up perfectly.
When pouring concrete floors openings should be left between jambs so that checks and threshold may be grouted in accurately after the finished jambs are in place.

CAUTION

Template drawings are revised from time to time. We are not responsible for difficulties arising from the use of obsolete drawings. Always request our latest print for each installation.

Plate 11

DOOR STAYS AND HOLDERS

NO. 38 AND NO. 39 (PATENTED)

For Holding Doors Open

Note: We recommend Rixson (No. 38) (No. 39) Door Stay and Holder for all exterior and vestibule doors.

Because of the special release feature embodied in the No. 38 holder damage cannot result to either door or holder when the door is thrown open violently or forced shut without releasing the thumb turn.

The curved spring arms of Rixson Door Stays and Holders furnish a shock absorbing action when the door is opened, relieving the strain on the hinges. Entrance doors to public buildings, roof doors opening against brick reveals, etc., require the protection this device affords.

Made in two styles, as follows:

No. 38 only holds the door open when a thumb piece "E" is turned. (See Fig. 1.)

No. 39 holds the door open automatically; it has a wedge shaped stationary block that engages spring arms "B" when the door is pushed open. It is released by a slight pull.

Heavy traffic doors, or doors made of soft wood, should have anchor piece "C" attached with bolts through door. (See Fig. 2.)

PRICE LIST RIXSON DOOR STAYS AND HOLDERS
NOS. 38 AND 39

Size, in.	Suitable for doors of following widths	Price, each		
		Steel		Phosphor bronze
23	2 ft. 2 in. to 2 ft. 5 in.	Electro gal. or black rustless	Gal. and painted statuary bronze	\$ 8.00
27	2 ft. 6 in. to 2 ft. 9 in.	\$4.60	\$5.00	8.50
31	2 ft. 10 in. to 3 ft. 2 in.	4.75	5.20	9.00
36	3 ft. 3 in. to 3 ft. 8 in.	5.00	5.50	10.00
		5.50	6.00	

Bolts with nuts and washers for anchor piece "C," add to list for steel \$0.15.

Add to list for bronze \$0.30.

Plating on phosphor bronze only, finishes B8P to B14P, add to list \$1.50.

Chromium plate on phosphor bronze only, add to list \$3.00.
Packed 2 in a box with screws.

RIXSON

DOOR STAYS AND HOLDERS
For Exterior Doors

Plate 12

CONCEALED TRANSOM OPERATOR NO. 48 (PATENTED)

Rixson Concealed Transom Operator No. 48 is used for operating transoms over interior doors in hotels, hospitals, office and public buildings, etc. *It is not recommended for operating transoms in exterior walls.* No hinges are required when this device is used.

Made of cold rolled steel, with all bearings bronze bushed and all steel parts electrogalvanized. Operating handle is cast brass or bronze. The simplicity of the construction is shown in Fig. 8; the efficiency of a screw mechanism, as employed in this operator, is so well understood that further description is unnecessary.

No. 48 will operate bottom hung transoms (see Fig. 8) and also top hung or center pivoted transoms.

The handle can be located in any position on the casing by blocking out the jamb (at screws E-E) at the lower end of the operator. The upper end of jamb must not be blocked out.

Bending plate F and rod C does not interfere with the proper operation, as this adjustment is provided for in the construction of the operator.

Fig. 8 shows a left-hand operator.

The length of the operator is governed by the height of the door. Installations for center pivoted and top hung transoms must also take into consideration the height of the sash. For doors 7 ft. high, with bottom hung transoms, we carry in stock operators 2 ft. 3 in. long from center of pivot to center of handle; this locates the handle about 5 ft. from the floor, a location which has been found very practicable, as handles located lower than this have been known to catch and tear the clothing of passersby.

Instructions for Detailing

Round the lower edge of transom sash, hinged at bottom, as shown in typical installation, or detail the transom as shown. The upper edge of transom sash, hinged at top, requires similar detailing.

Detail indicates method of forming rebate and shows offset arm required for center pivoted transom sash.

Use offset sash arm on top or bottom hung transom when sash is placed an inch or more back from edge of jamb, or where construction will not permit arm, shown in Fig. 8, to be screwed into place.

Top or bottom hung transom sash should not exceed 2 ft. 0 in. in height.

Minimum height for center pivoted transom sash not less than 3 ft. 0 in.

The jamb on which the operator is mounted should be set $1\frac{1}{4}$ in. from the back.

PRICE LIST

No extra charge for operators up to 3 ft. 6 in. long.

Prices given are for operator complete with T handle.

	Each
Complete with T handle in in brass or bronze metal, dull or bright.....	\$7.00
For plated but not sanded finishes, except as noted below.....	7.50
For sanded and plated finishes, except as noted below.....	7.80
For chromium	8.50

Gold and silver plating, price on application.
Weight standard length, 6 lbs.

RIXSON

TEMPLATE DETAILS FOR
CONCEALED TRANSOM OPERATOR No. 48

Plate 13

CONCEALED TRANSOM OPERATOR NO. 50

(Patents Pending)

Designed particularly for use in metal partitions where space is limited and action must be positive. Mechanically correct and of the usual high standard of Rixson quality, this device is recommended for the most exacting specification and will render the utmost in satisfaction.

A very efficient screw and sector mechanism supplies ample power to operate practical center hung transoms. This operator will fit in a space 2-in. deep and 1½ in. wide and requires only two and one-half turns of the handle to open the transom to a maximum of 60 degrees.

Made of cold rolled steel; bearings bronze bushed; steel parts electrogalvanized; operating handle cast brass or bronze.

This device is recommended for center pivoted sash of moderate size and for light top or bottom hung sash not to exceed 14 in. in height.

Owing to the varying shapes of metal frames upper and lower brackets must be furnished to fit particular shapes. Submit details.

Instructions for Ordering

A right-hand door takes a right-hand operator when the fixture is placed on the lock side of the door. Fig. 1 shows a right-hand operator.

When transoms occur on corridor side and open out but are operated from room side of door the mechanism must be reversed at factory. State "Reversed Mechanism" when so ordering. The right-hand operator shown in

Fig. 1

Fig. 1 would then be "Left-hand Reversed Mechanism."

The length of the operator is governed by the height of the door. In the case of center and top hung transoms the height of the sash must also be considered.

For doors 7 ft. with center pivoted transoms we carry in stock operators 3 ft. long from center of pivot to center of handle. (See detail.) This brings the handle about 5 ft. from the floor, which has been found the best location as torn clothes have resulted from handles placed lower.

State hand wanted.
Give height of door.
Give height of transom.
Give thickness of door jamb.
State if transom is to be hung at bottom, center or top.
Give thickness of transom bar.
Give finish wanted on handle.
Number of hinges needed.

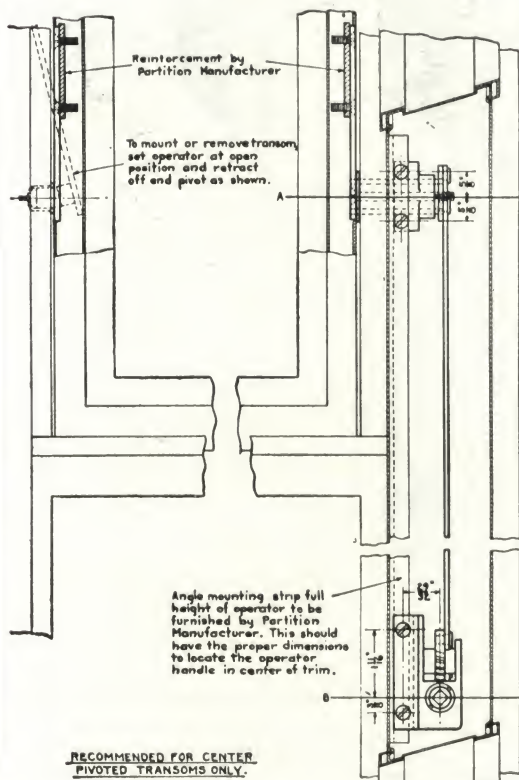

PRICE LIST

No extra charge for operators up to 3 ft. 6 in. long.

Prices given are for operator complete with knob handle.

	Each
Complete with handle in brass or bronze metal, dull or bright.....	\$5.00
For plated but not sanded finishes, except as noted below.....	5.50
For sanded and plated finishes, except as noted below.....	5.80
For chromium.....	6.50

Gold and silver plating, price on application.
Weight standard length, 4 lbs.

RECOMMENDED FOR CENTER PIVOTED TRANSOMS ONLY.

Screw reinforcement for reset by Partition Manufacturer should be in one piece and not attached to trim. Clearance holes in trim allow handle to center on operator.

TEMPLATE DETAILS FOR
CONCEALED TRANSOM OPERATOR No. 50

Plate 14

ADJUSTABLE BALL HINGES (Patented)

Note: These hinges are especially recommended where a bronze hinge of distinctive appearance and superior wearing qualities is desired, particularly on metal doors.

Rixson (Patented) Adjustable Ball Hinges embody mechanical features that are of particular advantage with metal doors.

On account of the special bronze used, etc., we are able to guarantee these hinges when used one pair to the door on heavy doors, such as hollow metal corridor doors in office buildings. Due to the warpage often encountered with wood doors, we recommend the use of a pair and a half on each wood door.

Friction is virtually eliminated in that the pivot A, cup bearing B and the steel ball are all of hardened steel.

The up and down adjustment feature is easily used. To raise or lower the door it is only necessary to remove Cap D; the pivot and in turn the door can be raised or lowered by turning the slotted disc, on which the pivot rests, with a large screw driver. Pivot A has a key (C) which fits in a slot in the knuckle and prevents the pivot from turning.

Rixson Adjustable Ball Hinge No. 3 is made in two widths: the narrow No. 3 hinge has the same overall dimensions as the No. 2 hinge but is much heavier, therefore suitable for use with extra heavy doors; the wide No. 3 hinge is furnished blank or with screw holes as required.

We do not supply this hinge in steel.

PRICE LIST RIXSON (PATENTED) ADJUSTABLE BALL HINGES

No.	Description	Price per pair	
		5x4½	5x8
2	Cast bronze, polished or dull.....	\$ 9.00

Plate 15

FRICTION HINGE NO. 85

(Patented)

Note: This hinge is recommended for use on hospital and hotel room doors and inswinging casement windows.

Rixson Friction Hinge No. 85 is designed on the simple mechanical principle of a brakeband. It prevents slamming and holds the doors or sash open at any point; it is not affected by normal drafts. The center knuckle has a flat extension which passes around the pin. Screws (B) are threaded into this extension and friction is applied by simply turning these screws with a large screwdriver. There is a perforated sleeve (C) surrounding the pin; the perforations retain the grease which serves as a lubricant to eliminate all possible chance of noise. Friction is distributed over an unusually large area, an essential feature which permits easy and accurate adjustment and prevents wear. Being of the loose pin type, application is simple. This friction hinge has been on the market for more than ten years and there are thousands of pairs in use. A list of installations will be gladly furnished upon request. Wood screws for use with this hinge are specially made, being threaded clear up to the head to insure a good hold.

PRICE LIST RIXSON NO. 85 FRICTION HINGES

OLIVE KNUCKLE HINGES

(Patented)

Note: We recommend that the sand blasted finish be used and painted or stained at the job to match woodwork. No. 80 is intended for use on light doors up to 1½ in. thick. No. 81 is recommended for heavier doors. No. 84¼ is a cabinet hinge for use on bookcase and cupboard doors.

The knuckle of this hinge is a copy of the popular but expensive French Olive Knuckle Hinge. The leaves have been so designed as to make them readily adaptable to American construction and easier to paint than their French prototypes.

The increasing demand for this type of hinge, not only in fine residences but also for hospitals, hotels and apartment houses, shows that its advantages are well appreciated and that its moderate cost makes possible its choice in preference to ordinary hinges, even where large quantities are involved.

These hinges are made in cast malleable iron, selected for its unbreakableness, and also in brass and bronze metal. Architects interested in "half polished iron" hardware should ask to see sample as we feel confident that our Olive Knuckle Hinge in this finish will meet with approval. We do not make these hinges in steel or ordinary cast gray iron, nor in plated iron. These hinges have been used in some of the finest residences in the country; a list of references will be gladly furnished.

Painters' Instructions — Note: These hinges can be finished to match natural hardwood as well as painted woodwork. To match natural finish woodwork or stained woodwork, give the hinges one coat of yellow ochre, let this coat dry, then stain or varnish same as woodwork.

To match painted woodwork, just paint the hinges same as the woodwork; the sand blasted finish which is primed makes the paint stick perfectly.

PRICE LIST RIXSON OLIVE KNUCKLE HINGES

	Description	Price per pair

Brass and Bronze Nos. 34½, 35, 35½ and 35¾

Steel Nos. 134½, 135, 135½ and 135¾

More than a half million Rixson Casement Holders in use to day attest the reliability and popularity of this simple and sturdy device.

Casements: This holder permits the window to open a little beyond right angle; about 100 degrees. It holds the sash at any point automatically.

Friction is adjustable so that the resistance required to hold the sash can be set to suit even very small and light sash.

Transoms: For an inexpensive yet substantial means of holding transoms this device surpasses

chains. It holds the transom at any point. Now made in brass, bronze and steel and in four sizes to suit varying sash dimensions.

Anchor pieces "A" and "B" furnished but anchors "C" or "D" supplied at no additional charge when required. Anchor "C" suitable for steel sash and where the holder is applied on the outside of sash. This anchor can also be supplied on the rod end. Anchor "D" has the disconnecting feature for use with reversible casement hinges such as our No. 90 Casement Hinge.

CASEMENT WINDOW OPERATORS

CASEMENT OPERATOR NO. 94 (PATENTED)

For Hinged Windows Swinging Out

Note: We recommend application above the stool, but when desired and so ordered, we will furnish rosette to finish hole in apron where handle passes through.

This operator has the same efficient arm with noiseless sliding block that is embodied in the popular Rixson Casement Operator No. 95.

Rixson Casement Operator No. 94 is made of steel stampings, with a hard bronze driving screw, providing a construction that is both simple and strong, with few working parts.

The case is very narrow and this fact allows installation on stools only $1\frac{1}{2}$ in. wide. When used with steel windows on an exceptionally narrow stool, or where no stool occurs, a steel base plate can be supplied at small extra cost. Special anchor pieces are furnished to suit various types of steel windows. The sash is locked in position at all times, eliminating rattle. Only three and one-half turns of the handle are required for one complete operation.

Handles—The data given regarding handles for Rixson Casement Operator No. 95 applies in its entirety to Casement Operator No. 94 (see following page) in so far as finishes, styles and prices are concerned. The following construction features, however, should be noted regarding handles for Rixson

Casement Operator No. 94: Unless otherwise ordered handles are furnished for stools $4\frac{1}{2}$ in. wide; all steel handles are squared 3 in. back from ends to facilitate cutting to suit various stool widths.

CASEMENT OPERATOR NO. 94
For Hinged Windows Swinging Out

Plate 19

CASEMENT WINDOW OPERATORS

CASEMENT OPERATOR NO. 95 (PATENTED)

For Hinged Windows Swinging Out

Rixson Casement Operator No. 95 has been on the market for more than ten years, having been used during that period in all types of buildings, both public and private, with complete satisfaction to the users.

It permits the opening or closing of outswinging casement windows without disturbing the fly screens. A window equipped with Rixson Casement Operator No. 95 is always locked in position and cannot be moved except by turning the handle. When closed, the window is held absolutely tight, eliminating all rattle.

This device may be installed so it is concealed or exposed, as desired. (See Figs. 6 and 7.)

The mechanism being of the screw type develops ample power to handle sash in sizes up to 2 ft. 6 in. wide. (See Fig. 5.) The driving screw is of steel with double square threads and the traveler that runs on this screw is of cast bronze, doing away with all possibility of these two parts ever rusting together.

The slide which runs inside the arm is covered with fiber to eliminate friction and make the device noiseless.

In the iron operator the case and sash plate are made of malleable iron because of its unbreakableness.

Where required a sash plate $1\frac{1}{8}$ in. high can be supplied.

Handles—A handle for each operator is not essential, but when so ordered can be furnished made fast to the operator without additional charge.

Unless otherwise ordered, detachable handles are furnished suitable for stools $5\frac{1}{2}$ in. wide as this has

Operating Mechanism Casement Operator No. 95

been found to be the average width. Handles suitable for stools up to 12 in. in width will be furnished at list prices. All handles are squared 3 in. back from ends to facilitate cutting to suit various stool widths.

When operator is ordered for concealed installation a brass rosette, which trims the hole bored in the apron for the operating handle, will be furnished without additional charge. (See Fig. 7.) Where extremely long handles are to be used, a guide which fastens on the inside edge of the stool can be furnished in galvanized or plated finish (see handle No. 9, plate 22);

this guide prevents the handle from chafing the edge of the stool.

OPERATORS ONLY—HANDLES NOT INCLUDED

	Each

Plate 20

CASEMENT WINDOW OPERATOR NO. 194

For Steel Hinged Windows Swinging Out
(Patented)

A wonderfully neat and effective method of control of out-swinging steel casements is afforded by Rixson's No. 194 Case-ment Operator.

The simplicity of design and the ease of application makes this device a most attractive one. The sliding bar attached to the sash has standard perforations for screws and the raised arm permits application without the need of blocking to clear the frame. This is a very advantageous feature and should be considered both from the viewpoint of appearance and cost of installation.

Priced as the No. 94 for wood sash (Plate 19).

SPRING HINGES and PIVOTS for all kinds of doors, also Strikes, Bolts, Latches and Fittings for lavatory units in office buildings, hospitals, theaters, public buildings, etc.

For Bommer Door Closers and Door Checks, see Manufacturers' Index in the front of this volume.

architect to give complete details when making specifications except where special hardware sizes may be required. Template drawings, which are furnished manufacturers of metal doors, are not included herein but may be had gratis on request.

Facilities and Service

The BOMMER SPRING HINGE COMPANY was established in 1876 in Brooklyn, N. Y. The plant now consists of 6-story brick buildings, covering almost a square city block, where the largest order can be handled promptly. A fleet of motor trucks and nearby rail and steamer terminals and docks insure quick delivery. When an architect specifies Bommer Products there will be no delay due to lack of manufacturing or shipping facilities nor to intelligent effort to please.

The Purpose of This Catalogue

This catalogue comprises the next 9 pages and has been arranged to give the architect information on Bommer Products. Illustrations, line drawings, and tables of specific Bommer Products make it possible for the

The Quality and Price of Bommer Products

Standard for over 50 years, and kept up-to-date, retaining superiority over all others.

Only the best materials obtainable are used in Bommer Products and numerous international awards officially attest that they are the most useful and satisfactory for general use.

Countless fine buildings throughout the world are equipped with Bommer Spring Hinges.

Prices are guaranteed to be no higher than those for goods of corresponding type.

Specifications

Architects, in specifying these products, should use the word "Bommer" and in addition thereto, if possible, the catalogue number of the article and finish symbol. Hardware dealers and lock manufacturers can include them in their contracts.

All our finishes conform to those of the United States Bureau of Standards.
All "oxidized and relieved" finishes have the entire surface slightly oxidized uniformly without any mottling or striping.
For Galvanized we furnish Genuine Cadmium Plate which is more than 100% superior to any commercial zinc finish.

PLATE 1. BOMMER STANDARD SPRING BUTT HINGES

Double and Single Action—Hanging Strip Required

Bommer Standard spring butt hinges require a hanging strip for fastening them to the door casing. One flange is mortised into the hanging strip and the other into the door, which gives a uniform appearance and secure fastening.

They are made of wrought steel, bronze and brass, in all finishes. The bearing surfaces are of different hardness in order to reduce friction. The spring barrels and their connecting plate are integral and exceptionally strong and of uniform thickness. The springs are of large diameter and unusual length, made of the best oil tempered steel wire, have great resilience and power and never go lame. The pintle and flange are interlocked, preventing the ball tips from working loose.

Note: To avoid errors, specify by number and state which finish is wanted. Special finishes made to match other hardware when samples are submitted.

PLATE 2. BOMMER EVER READY SPRING BUTT HINGES

Double and Single Action—No Hanging Strip Required

Ever Ready Bommer spring hinges do not require a hanging strip. They are fastened to the surface of the door casing, the entire thickness of hinge being mortised into the door.

They are made of wrought steel, bronze and brass, in all finishes. The bearing surfaces are of different hardness in order to reduce friction. The spring barrels and their connecting plate are integral and exceptionally strong and of uniform thickness. The springs are of large diameter and unusual length, made of the best oil tempered steel wire, have great resilience and power and never go lame. The pintle and flange are interlocked, which prevents the ball tips from working loose.

Double Action Type
No. 3029Single Action Type
No. 3000Directions for Selecting
Proper Size Hinge

The recommendations given in the table under the details apply to doors made of white pine or other soft wood. For hardwood doors, plateglass doors, metal-covered doors, doors having hardware or heavy kick-plates or doors exposed to strong drafts, always use the largest size hinge which the thickness of the door will permit; also take note that wide doors always require larger size hinges than narrow doors.

To avoid errors, specify or order by number and state which finish is wanted. If the finish desired is not mentioned the finish at head of column will be sent. When ordering hinges with special finish to match other hardware, send sample, or specify by the symbol given on our first page.

Double Action Type No. 3029

Details of Ever Ready Spring Hinges

Size of hinge, in.	T Type 3029 thickness of the 3 leaves, in.	T Type 3000 thickness of the 2 leaves, in.	A Minimum thickness of door, in.	B Wood door maximum thickness, in.	S Metal door maximum thickness, in.	Width of door, ft. in.	Wt. of door, lbs.
3	15/64	11/64	3/4	1	7/8	2 2	30
4	7/4	11/64	7/8	1 1/4	1 1/8	2 4	42
5	9/32	3/16	1 1/8	1 1/2	1 3/8	2 6	56
6	5/16	7/32	1 1/4	1 3/4	1 1/2	2 8	72
7	3/8	15/64	1 3/8	2	1 3/4	2 9	90
8	15/32	17/64	1 1/2	2 1/4	2	2 10	110

When hinges larger than the above are required, use Bommer Standard spring butt hinges with a hanging strip.

Always use the largest size hinge the thickness of door will permit.

Single Action Type
No. 3000

PLATE 3. BOMMER VERTICAL SPRING PIVOT HINGES

Double Action—Release and Non-release Types

Bommer Release Type—The spring-action may be temporarily released on either side of the door by pressing down the side-pedal with the foot before opening the door, and is automatically re-engaged when the door is closed. By using a stop on the door-casing it works equally well single action. No weakening of the door, only a small section of the wood need be cut lengthwise with the grain. Saves labor and admits of close fitting; back edge of door is slightly rounded. Hardened

Spring-pivot as it appears when fitted to the door
Release Type 20, Has Spring Adjustment and Alignment Device

tool-steel ball-bearings are located in upper part of pivot-frame away from water, dust and dirt.

The strongest and most durable spring-pivot of its type, the springs are made of the best oil-tempered steel wire, have great resilience and power and never go lame. As sent out the spring is correctly set up, but the spring power can be adjusted to suit after the pivot is fixed to the door. The top-pivot has a spring-actuated plunger which permits the

Non-release Type 10, Has Spring Adjustment Only

door to be taken down without unscrewing. Workmanship, finish and elegance of appearance are unrivalled.

Bommer Non-release Type has the same general design and construction as Release Type 20. But it has not the spring action release feature.

PLATE 4. BOMMER HORIZONTAL SPRING PIVOT HINGES

Will hold the door open when swung back beyond 90°. Type No. 18 has an efficient alignment feature. The spring tension is adjustable on both types. The floor plate is screwed to the floor surface, obviating the need of cutting holes in the floor. The weight of the door is carried on ball bearings. All moving parts can be lubricated through a hole in the side plate.

BOMMER SPRING HINGES FOR METAL COVERED DOORS

BOMMER CLAMP-FLANGE SPRING HINGES

For Metal Covered Doors

Double Action

Type 10042

Hinges with one clamp-flange are regularly furnished with bolts, to clamp to the door and flathead machine screws for the jamb flange, but if so ordered, will be furnished with wood screws for the jamb flange.

Hinges with two clamp-flanges can be furnished when specified with bolts to clamp flanges to the door and also to the hanging-strip on the door jamb.

PLANISHED STEEL (ONLY) Hinges with one clamp-flange

Length of flange and clamp, in.	Japanned dead black	Bronze or brass plated bright or dull finish (state which)	Galvanized
	No.	No.	No.
8	10042	10492	10892
10	10045	10495	10895
12	10048	10498	10898

8	1 1/2 to 1 3/4	2—10	110	3	4—1/4 in.
10	1 3/4 to 2	3—0	150	3 1/2	5—5/8 in.
12	2 to 2 1/2	3—2	190	4	5—3/8 in.

Always use the largest size hinge the thickness of door will permit.

BOMMER HALF-SURFACE SPRING HINGES

For Metal Covered Doors with Pressed Steel Jamb Stairways, Fire Exit and Corridor Doors

Single Action

Type 10009

These half-surface spring hinges are made to standard and close to commercial limits required by metal door and trim manufacturers.

Furnished with 1/2x12-24 F. H. screws for jamb leaf and 3/8x2 1/4 R. H. with grommet nuts for the door leaf. In bolting the surface leaf to the door the grommet nut draws the metal tight over the wood core preventing buckling of the metal.

PLANISHED STEEL (ONLY)

Length of flanges, in.	Japanned dead black	Bronze plated or brass plated (state which)	Antique copper or statuary finish (state which)	Dull brass or oxidized brass finish (state which)	Nickel plated bright or dull or galvanized (state which)

BOMMER SPRING PIVOTS FOR OFFICE GATES

Types 11 and 11M—For 1⅞ to 2½-in. Thick Wood or Metal Gates and Railings

Suitable for either double acting or single acting gates, no need for cutting out or mortising gate or doorpost, although they can be mortised if so preferred. They are adapted to either wood or metal gates and railings and can be adapted to many other uses; easy to apply, save labor, and allow close fitting; back edge of gate is slightly rounded, using center of pivot as radius. Workmanship and finish unsurpassed.

BOMMER LAVATORY SPRING HINGES

For either right or left-hand doors opening in or out.

These hinges are suitable for marble or slate partitions of the following thicknesses: 1 1/4, 1 1/2, 1 3/4, and 2 in.

The clamp-flange for the marble is adjustable 1/8 in. over and under sizes given to allow for variations in thickness. The single action are made to close the door but if so specified the springs can be made

reverse action, to hold the door open.

The clamp-flange of the double action is not adjustable. The adjustable clamp-hinges are furnished with bolts having one open nut, but can be supplied with all closed nuts when so specified. *The exact thickness of both*

BRASS NICKEL OR CHROMIUM PLATED OR BRONZE HIGHLY POLISHED

1000 Length of flanges, 4 in. Single action, has one clamp-flange

1001 Length of flanges, 4 in. Single action, has two clamp-flanges

1005 Length of flanges, 4 in. Double action, has one clamp-flange, not adjustable

the marble and the door must be stated.

No. 1012

For extra light and narrow lavatory doors, combination of blank and single action lavatory spring hinge can be used. Single acting hinges are made to close the door, but if so specified, they can be furnished to hold door open.

1006 Length of flanges, 4 in. Double action same as No. 1005, but has two clamp-flanges

1012 Length of flanges, 4 in. Single action, has angle-flange instead of clamp-flange

1013 Length of flanges, 3 in. Single action, constructed same as No. 1000. For extra light and narrow doors

No. 01012

FOR LAVATORY DOORS ON MARBLE OR SLATE PARTITIONS WITHOUT HANGING STILES

1015 and 1016 are for hanging two single-acting doors right and left to the same partition on one clamp-flange.

1002 and 1015 are for doors opening in and can be made to hold the doors open or closed as may be specified.

1016 and 1003 are for doors opening out; made only to hold the doors closed.

Flanges of the spring hinges are 4 inches in length; of the blank hinges without springs are 2 inches in length.

The clamp-flange for the marble is not adjustable; the exact thickness of marble and door must be stated when ordering.

BOMMER PIPE-CLAMP SPRING HINGES

Double and Single Action for Lavatory Doors No. 1019 and No. 1004.

No. 1004

No. 1019

For pipe 1 3/8, 2, 2 1/2 and 2 3/4 in. outside diameter, are fastened to the pipe with machine screws.

Single action as regularly made close the door, but if specifically so ordered they can be made with reverse spring to hold door open, without extra charge.

BOMMER SURFACE SPRING HINGES

1011 as regularly made close the door, but if specifically so ordered, they can be made with reverse springs to hold it open without extra charge.

For very light and extra narrow lavatory doors only, a hinge 1011 at the top of the door, 01011 at the bottom, may be used. The checking blank 1020 may be used at the bottom of the door with surface hinge 1011 at the top. It will hold door partly open while the closet is unoccupied, dispensing with the use of an indicator.

These hinges are regularly furnished with bolts for one leaf and wood screws for the other unless otherwise specified.

PLATE 8. BOMMER SPRING PIVOTS FOR LAVATORY DOORS

For Lavatory Doors on Marble, Slate or Wood Partitions or for Pipe Standards

For double or single action doors, right or left-hand door, opening in or out or for regular action to close the door or reverse action to hold door open.

Thickness of marble must be stated. If wanted for pipe-standards, outside diameter of pipe must be stated.

Type 1025 for doors $1\frac{1}{8}$ to $1\frac{1}{2}$ in. thick. The pintle has a square shank fitting into the square hole of the bottom bracket so the pivot may be set in either position to close the door or hold it open. The spring tension is adjustable.

Type 1030 for doors $\frac{7}{8}$ to $1\frac{1}{2}$ in. thick. Will hold door open or closed at any point selected. To align the door or obtain regular or reverse action, slightly unscrew nut at bottom of hinge and move door to the point desired, then tighten the nut and lock-washer firmly.

The clamp-flanges are adjustable $\frac{1}{8}$ in. over and under the following sizes: 1, $1\frac{1}{4}$, $1\frac{1}{2}$, and $1\frac{3}{4}$ in.

When ordering state if to be used double or single action, so proper tension will be applied to the spring.

Products

Manufacturers of a complete line of PATENT SPRING HINGES, including "Chicago" Spring and Springless Butt-hinges; "Triplex" and "Simplex" Spring Butt-hinges; "Relax," "Premier," "Ajax," "Durex" Spring Pivot-hinges; "Triplex" and "Sagless" Lavatory Door Spring Hinges; Lavatory Door Bolts, Latches and Stops; "Triplex" Gate Spring Butt-hinges; "Sagless" Gate Spring Pivot-hinges; "Sanitex" Closet Seat Spring Hinges; "Chicago" Cabinet and Refrigerator Spring Hinges.

Specially Constructed Products

We solicit details of conditions which require special construction of our products.

"Triplex" Spring Butt-hinges—Double Acting, Type 2001; Single Acting, Type 2002

Hanging strip required.

The Chicago "Triplex" (Three Leaf) spring butt-hinge requires a hanging strip for applying it to door casing. One flange is mortised into the hanging strip and the other into the door, which gives a uniform appearance and secure application.

The body is made from one piece of metal, formed with multiple thickness in the web and there is no joint where the barrel continues as the web. This gives maximum of strength and rigidity and avoids exposing springs to moisture which would cause rust and breakage.

The broad steel bearings, hardened lug bushings and disassemblment features are characteristics of this product. Springs are made of the best tempered steel wire, in ample proportions for the most excessive requirements.

Single acting hinges, when so specified, can be furnished with reverse-action springs to hold door open.

This type of hinge is also made with wide web and flanges, to clear handrail on office gates. (Type G2001 double acting and Type G2002 single acting.)

Specifications

In specifying, designate article by number, size and finish. Hardware dealers have our catalogue, prices and complete data pertaining to the "Chicago" spring hinge products. Hinges are made of steel,

brass or bronze metal, in standard sizes and all standard finishes.

Any special finish to match other hardware, can be furnished promptly.

Quality and Prices

The quality has been recognized for many years and the product considered as standard.

Prices are comparative with those for articles of similar type and quality.

"Simplex" Spring Butt-hinges—Double Acting, Type 9001; Single Acting, Type 9002

No hanging strip required.

The Chicago "Simplex" (Simple Application) spring butt-hinge is applied to the surface of door casing without a hanging strip, the entire thickness of the hinge being mortised into the door. This method of application is simple and economical. The single acting hinge may be applied with one flange mortised into the casing and the other into the door.

The web between the barrels is straight, which gives strength, balanced strain and uniform appearance.

A feature, of great importance, is that all the standards of the "Triplex" spring hinge, which have been recognized for many years, have been maintained in the "Simplex" spring hinge. The body made from one piece of metal formed with multiple thickness in the web and no joint where the barrel continues as the web, distance between the axial centers, location of screw holes, length of mortise cut, size of springs and barrels, straight web, etc., all are identical with the "Triplex," which has been recognized for construction and quality by architects, builders and hardware dealers.

Type 2001
"Triplex" Double Acting

Type 2002
"Triplex" Single Acting

Type 9001
"Simplex" Double Acting

Type 9002
"Simplex" Single Acting

"Triplex" and "Simplex" Double and Single Acting Spring Butt-hinges

Application of proper size of hinge, according to conditions, is an essential to consider in specifying. It is advisable to avoid overloading the hinge by the selection of too small a size, thereby causing the annoyance of doors improperly operating and possible breakages. Details shown on the next page will assist in specifying "Triplex" and "Simplex" hinges. Single acting "Triplex" and "Simplex" hinges, when so specified, can be furnished with reverse-action springs to hold the door open. Supplied in steel, brass or bronze metal in standard finishes or to match other hardware

*Single acting, Type 9002, may be applied with one flange mortised into casing and the other into the door.

Chicago "Relax" Spring Pivot-hinges—Double Acting, Type 6001

The Chicago "Relax" spring pivot-hinge is suitable for highest class requirements. It is applied to surface of floor, thereby avoiding cutting and possible interference with girders or iron beams. The tension is adjustable. The spring action is readily disengaged by a lever, allowing door to be placed open at any desired position. This is a great convenience, and eliminates the tendency of springs to lose their power as a result of remaining fixed at high tension when doors are held open by door holders. Weight of door is carried on ball bearings located in the top of hinge, thereby protected from dirt and moisture. Plunger top pivot, furnished with this hinge, permits door to be fitted closely to top casing and to be taken down readily without removing any screws. No hanging strip required. Jamb edge of door must be slightly rounded. For tile or concrete floors specify jamb attaching plates.

Furnished in three sizes, for doors 1 1/2 in., 1 3/4 in., and 2 in., and 1 3/4 in., 2 in., and 2 1/4 in.

Jamb Attach-ing Plate

Type 6001
Chicago "Relax" Spring Pivot-hinge

to surface of floor. Mechanical construction eliminates the tendency of wear in bearings. Action of spring is compression and it is made of best tempered steel flat wire; tension is readily adjusted and a device is provided for aligning door. With this hinge, door will remain open if swung to 90°. No hanging strip is required. Jamb edge of door must be slightly rounded. For tile or concrete floors specify jamb attaching plates.

Furnished in two sizes, for doors 1 1/2 in. and 1 3/4 in. to 2 1/4 in.

Type 4001
Chicago "Premier" Spring Pivot-hinge

"Chicago" Spring Butt-hinges—Double Acting, Type 1 1/2

The "Chicago" spring butt-hinge is constructed in a most substantial manner. The spring power, effected by both a torsion and leverage principle, produces a positive action as well as an easy movement of the door.

General construction and mechanical action of this hinge give best results obtainable in operating doors subject to excessive and violent use.

For doors of the following thicknesses:

7/8 to 1 in.
1 1/8 to 1 3/4 in.
1 3/8 to 1 1/2 in.

1 3/4 to 2 in.
2 1/4 to 2 1/2 in.
2 3/4 to 3 in.

Type 1 1/2
"Chicago" Spring Butt-hinge

Chicago "Premier" Spring Pivot-hinges—Double Acting, Type 4001

The Chicago "Premier" spring pivot-hinge is applied

"Chicago" Springless Butt-hinges—Double Acting, Type 3 1/2

The "Chicago" springless butt-hinge can be used advantageously in combination with a "Chicago" spring hinge, Type 1 1/2, where doors are light or narrow.

This combination is not advisable on outside doors subject to drafts, where a pair of spring hinges should be used.

Type 3 1/2
"Chicago"
Springless
Butt-hinge

Chicago "Sagless" Gate Spring Pivot-hinges, Type 4007

The Chicago "Sagless" gate spring pivot-hinge is the pivot type, therefore if the gate is wide or heavy, it can not sag. The weight of the gate is carried on ball bearings and is not supported by the spring, therefore a very light tension may be applied. Exterior tension adjustment permits use after hinge is applied. Convex lock washer forms a ball and socket adjustment which automatically aligns hinge pintle.

An adjustable pintle, with locking device, permits setting the gate or door to remain at rest in any desired position. The spring is of large dimensions and made of best tempered steel flat wire. A ball bearing top socket is supplied with this hinge. The application is extremely simple and, if desired, all attachments may be applied to the surface of the post and gate without mortising. This is very desirable for metal gates.

These hinges are supplied in iron, brass or bronze metal and are suitable for gates 1 1/8 to 2 1/2 in. thick with a hand rail as wide as 2 1/2 in.

The attaching plates of the brackets are 2 1/4 in. high by 1 1/2 in. wide. Pintle center to surface of post is 1 5/8 in.

Spring Pivot-hinge

Chicago "Triplex" Lavatory Door Spring Hinges

The Chicago "Triplex" lavatory door spring hinges, illustrated, are made in bronze or brass metal, polished or nickel-plated, or in white bronze (nickeline), for partition thicknesses as specified. The spring hinge flanges are 4 in. long.

The 2242, 2244, and 2246 have adjustable clamp flanges and open head nuts on bolts, permitting adjustment of 1/8 in. under and over the following sizes by which they are specified: 1, 1 1/4, 1 1/2, 1 3/4 and 2 in.

The advantage of the adjustment in clamp flange is that it can be properly and securely applied to partitions having slight variations in thickness.

Where doors are very narrow or light weight, a single acting spring hinge may be used in conjunction with a springless hinge. See Types 2244 and 2444 illustrated below. Where doors swing out and occupancy indicator is not desired, a checking springless hinge, Type 2246 or 2446 can be used. This hinge holds door ajar when not bolted shut. Where doors swing in, hinges can be furnished with reverse action springs to hold door open. Lavatory door stops similar to No. 1247F, with keeper for door bolt similar to No. 1244, can be supplied in various types to meet conditions.

Chicago "Sagless" Lavatory Door Spring Pivot-hinges, Type C7227S and C7227M

The "Sagless" lavatory door spring pivot-hinge is made with attachments for application to marble partitions or pipe standards. The clamp type "C" attachments are adjustable 1/8 in. under or over the following sizes by which they are specified: 1, 1 1/4, 1 1/2, 1 3/4 and 2 in. This hinge can be used either double or single acting. An adjustable pintle with locking device permits setting the door to remain at rest in any desired position.

A larger hinge of similar type, C4227S or C4227M with greater spring power and with exterior tension adjustment can also be furnished. This hinge is particularly adapted to double acting vestibule doors. See Type 4007 for description of features.

DOUBLE ACTING and SINGLE ACTING JAMB SPRING HINGES, SPRING and GRAVITY PIVOT HINGES, STRIKES, BOLTS, LATCHES and HINGES for toilet stall doors; special HOSPITAL LOUVRE HINGES; SCREEN DOOR HINGES; DOUBLE ACTING FLOOR HINGES; DOOR GUARDS; VENTILATING WINDOW LOCKS.

For Rite-Way Garment Fixtures, Toilet Partitions and Shower Stalls, see Manufacturers' Index.

Quality and Price

Lawson hinges are of the highest quality obtainable. Prices are competitive with other standard makes.

Lawson "Universal" Pivot Spring Hinge

Can be set to hold a door open at any position desired. The pivot bearings prevent sagging of the door.

The hinge support and pivot support can be used either right or left hand, opening in or out by using the pivot support as a hinge support or vice versa.

The pintle is tapered at the bottom and fits into a tapered socket. When the nut is tightened, the pintle is drawn down into the socket, and this taper fit holds the pintle firmly in place.

The hinge is double acting but can be used single acting by the application of a door stop or strike. Best results are obtained by using double acting hinges as this eliminates the pounding of the door against the strike, which causes loosening of the joints or breaking of the marble.

Because of its simplicity, strength, adaptability to any construction and reversible feature, architects and contractors specify Lawson's "Universal" pivot spring hinge.

Lawson Gravity Pivot Hinge

Resembles Lawson "Universal" pivot spring hinge in size, shape and attachments. For use on double act-

ing doors, but can be used on single acting by the application of a door stop or strike.

This hinge has a ball bearing roller which guarantees smooth action. All working parts are completely inclosed in the hinge housing. Furnished with brackets for attaching to marble, slate or metal partitions.

Types of Buildings with Lawson "Universal" Pivot Spring Hinges—

St. Paul Union Depot, St. Paul, Minn.
Loew's State Theater, New York, N. Y.
Los Angeles Public Schools, Los Angeles, Cal.
New York City Schools, New York, N. Y.
Furniture Mart, Chicago, Ill.
Elks Building, Louisville, Ky.
Bent School, Bloomington, Ill.
Edgewater Beach Hotel, Unit No. 2, Chicago, Ill.
Western Electric Co., Chicago, Ill.
New Palmer House, Chicago, Ill.
Masonic Temple, Detroit, Mich.

Some of the Partition Manufacturers Who Have Adopted Lawson "Universal" Pivot Spring Hinges as Standard Equipment—

The Vitrolite Company
New York Machinery Company
Atlanta Sheet Metal Works
Fiat Metal Manufacturing Company
Albatross Steel Equipment Company
Andres Stone and Marble Company
Structural Slate Company
Theo. S. Gassner.

Hardware Specifications for Toilet Stalls

Marble, Slate or Glass—All hinges for toilet stall doors shall be of the pivot type, similar to Lawson's No. 2234 or 2834, made by MILWAUKEE STAMPING COMPANY, and so arranged that they may be set to hold the door open, 3, 5, or 7 in., either in or out, as the owner may elect, after the hinges are applied. They shall be of solid brass, nickel plated.

All keepers for these doors shall be of the double acting type, similar to Lawson's No. 1850, 1852 or 1854. [See bottom of second page following.]

No. 2234
Spring Hinge

Details of the Lawson "Universal" Hinge

No. 2834
Spring Hinge

Metal Partitions—All doors shall be equipped with pivot hinges similar to Lawson's "Universal" hinge or Lawson's Gravity hinge for metal doors, made by MILWAUKEE STAMPING COMPANY, and so arranged that they may be set to hold the door open in or out 3, 5, or 7 in., as the owner may elect, after the hinges are applied.

Where Coin Locks Are to Be Used—(Add the following to above specifications.) All doors shall be set, before the strike is attached, to hold the door open 3, 6 or 9 in. Open door out and attach strike, thus giving the spring additional power necessary to insure locking of the door, no matter how gently the door is closed.

Lawson "Nu" Jamb Spring Hinge

The Lawson "Nu" Jamb spring hinge *does not* require the use of a hanging strip. It fastens directly to the jamb and thus gives a far more solid support for the door than if a hanging strip were used.

Where a hanging strip is already installed, this hinge can also be used. Only one mortise to make, therefore more easily and quickly applied.

Made of the best materials obtainable, this hinge is exceptionally strong and durable. It is fully guaranteed as to workmanship and material.

"Nu" Jamb Spring Hinge

Notice that the hinge fastens directly to the door jamb

The Only Mortise to Make to Attach "Nu" Jamb Spring Hinge

LAWSON "NU" JAMB SPRING HINGES

Size of hinge	For doors
3"	$\frac{3}{4}$ " thick x 2' 3" wide or 1" thick x 2' 0" wide
4"	1" thick x 2' 6" wide or $1\frac{1}{4}$ " thick x 2' 0" wide
5"	$1\frac{1}{2}$ " thick x 2' 6" wide or $1\frac{1}{2}$ " thick x 2' 3" wide
6"	$1\frac{3}{4}$ " thick x 2' 9" wide or $1\frac{3}{4}$ " thick x 2' 3" wide
7"	$1\frac{3}{4}$ " thick x 2' 9" wide or 2" thick x 2' 6" wide
8"	$1\frac{3}{4}$ " thick x 3' 0" wide or 2" thick x 2' 6" wide
10"	$1\frac{3}{4}$ " thick x 3' 0" wide or 2" thick x 2' 6" wide

For outside doors subject to draft, wide or heavy doors of hardwood, metal covered doors, or doors weighted with heavy plate glass or hardware, use the largest size hinge the thickness of the door will permit. Wide doors require larger size hinges than narrow doors.

Milwaukee Jamb Spring Hinges

To be applied to a hanging strip.

Material—The best grade of cold drawn steel, bronze or brass and spring steel of the finest oiltempered quality.

Construction—Springs are large diameter, unusual in length and retain their great resiliency and power indefinitely. Hinges are designed so as to protect the spring from moisture and grit.

Bearings are entirely enclosed in the barrel and are formed by the spring bottom and the tension adjustment working on the ball tips. This results in a large bearing surface. Outside surface is plain and smooth and can be easily kept clean.

Brass and bronze hinges are equipped with steel bearings. This makes them equally as strong and durable as steel hinges.

Finish—Great care is exercised to maintain a high standard in the finish. Each and every part is given an extra heavy coat of plating.

Finished in planished steel, solid brass or bronze.

Double Acting Hinge

Single Acting Hinge

Milwaukee Jamb Spring Hinges

SIZES FOR SINGLE OR DOUBLE ACTING BUTTS

Length of flange...	$\frac{3}{4}$ " to 1"	$\frac{7}{8}$ " to 1"	1" to $1\frac{1}{4}$ "	$1\frac{1}{4}$ " to $1\frac{3}{4}$ "	$1\frac{3}{4}$ " to 2"	$1\frac{3}{4}$ " to $2\frac{1}{4}$ "
Thickness of door.	$\frac{3}{4}$ "	$\frac{7}{8}$ "	1"	$1\frac{1}{4}$ "	$1\frac{3}{4}$ "	2"

Always select the largest hinge which the thickness of the door permits.

Gate Hinge

"Universal" Pivot Gate Hinges

Lawson "Universal" pivot gate hinge is sagless and requires no hanging strip. It is the only gate hinge with a positive alignment feature.

Maximum width at hand rail, 2 in. Thickness of gate, 1 to 2 in. Diameter of cup, 2 in. Brackets, 2x1 $\frac{1}{8}$ in. wide.

Matchless Pivot Hinges without Springs

The ball bearings distribute the weight and provide easy and noiseless action. For double and single acting doors.

No. 180 is for small doors and cabinets. No. 165 is for medium doors $1\frac{3}{8}$ to 2 $\frac{1}{2}$ in. thick. No. 175 is for doors weighing up to 2500 lb., 2 to 4 in. thick.

Floor Hinges

Series No. 800—This surface floor hinge is made for doors from $1\frac{1}{8}$ to $1\frac{3}{4}$ in. thick and of standard size, weighing under 55 lb.

Furnished with square beveled edge side plates which are reversible.

The ball bearing is at the top of the hinge where it should be to carry the weight. This arrangement also keeps it up out of the dirt. The hinge has a smooth, snappy action at all times. Wear is reduced to a minimum by having all moving parts hardened by a special process. Easily and quickly applied.

Series No. 600—This surface floor hinge is of heavier construction and has the working parts enclosed in a grease chamber which keeps out the dirt and prevents wear. For $1\frac{1}{8}$ to $1\frac{3}{4}$ -in. doors.

Series No. 900—This surface floor hinge is for heavier doors from $1\frac{3}{4}$ to $2\frac{1}{2}$ in. thick.

No. 800 Surface Floor Spring Hinge

Matchless Mortise Floor Hinge, Series 1700

Series No. 1700—For doors $2\frac{1}{4}$ in. thick and over, weighing approximately 500 lb. Especially adapted for factories. Has surface floor plate.

Details of Matchless Mortise Floor Hinge, Series 1200 to 1600, Inclusive

Do not use stronger than No. 1300 for residences. Width of door is the main point to consider

THE SHELBY SPRING HINGE CO.

Double and Single Acting Checking Floor Hinges

SHELBY, OHIO

NEW YORK REPRESENTATIVE, HARVEY BRONNER, 90 West Broadway, Room 51
PACIFIC COAST REPRESENTATIVE: POND HARDWARE SPECIALTY Co., 2115 Arapahoe Street, LOS ANGELES, CALIF.

Nos. 10 and 11 Shelby Double Acting Checking Hinges for Light Interior Doors

Cam action, compression spring, liquid checking, needle valve speed control, adjustable alignment. Hold-open, unless non-holdopen is specified.

Recommended for light interior doors:

No. 10 hinge for doors not over 2 ft. 8 in. x 7 ft. x 1 3/4 in. thick.

No. 11 hinge for doors not over 3 ft. x 7 ft. 6 in. x 2 in. thick.

Hinge Dimensions—Floor plate, wrought bronze or brass—9 3/8 in. long, 4 9/16 in. wide. Hinge case, iron, 8 5/8 in. long, 4 1/8 in. wide, 2 1/16 in. deep. Cement case, cast iron, 9 5/16 in. long, 4 3/8 in. wide, 3 1/8 in. deep.

Priced without cement case. Cement case priced separately.

Also made for office and partition gates—Nos. G10 and G11.

No. 1 Pivot

Nos. 16 and 17 Double Acting Checking Floor Hinges for Exterior and Heavy Interior Doors

Non-holdopen unless holdopen is specified. Compression spring, cam action, alignment adjustment, hinge arm and top pivot concealed in edge of the door, closing speed controlled by needle valve, all working parts are in non-freezing, lubricating checking liquid, which conforms to U. S. government standard.

No. 16 hinge for extra heavy or wide interior doors, for ordinary entrance and vestibule doors not over 2 ft. 8 in. x 7 ft. 6 in. x 2 in. thick.

No. 17 hinge for heavy entrance and vestibule doors not over 3 ft. 6 in. x 7 ft. 6 in. x 3 in. thick.

No. 16 Hinge Dimensions—Floor plate wrought bronze or brass—11 1/16 in. long, 5 in. wide. Hinge case, iron—10 1/8 in. long, 4 1/2 in. wide, 3 1/16 in. deep. Cement case, cast iron—11 5/16 in. long, 5 in. wide, 3 1/4 in. deep.

No. 2 Pivot

No. 17 Hinge Dimensions—Floor plate wrought bronze or brass—13 1/8 in. long, 5 1/2 in. wide. Hinge case, iron—12 5/8 in. long, 5 in. wide, 3 3/8 in. deep. Cement case, cast iron—13 3/8 in. long, 5 7/16 in. wide, 3 5/8 in. deep.

Nos. 16 and 17 priced with cement cases.

Blue Print Templates furnished on request.

Checking Floor Hinges can be furnished in all Hardware Finishes.

Single Acting Checking Floor Hinges, Nos. 12, 13, 14, and 15, Offset Arm

Compression spring, crank action, spindle seated in a ball-bearing, arm supporting door forged steel, all working parts operating in lubricating, non-freezing checking fluid U. S. government standard. Will hold open at 115° and can be opened to 180°. Can be furnished to hold open at 90°.

Door Sizes (Wood or Kalamein Doors)—No. 12 hinge for interior doors not over 2 ft. 8 in. x 7 ft. x 1 3/4 in. thick. No. 13 hinge for interior doors not over 3 ft. x 7 ft. 6 in. x 1 3/4 in. thick. No. 14 hinge for doors not over 2 ft. 8 in. x 7 ft. 6 in. x 2 in. thick. No. 15 hinge for doors not over 3 ft. 6 in. x 7 ft. 6 in. x 2 1/2 in. thick.

No. 12 Hinge Dimensions—Floor plate wrought bronze or brass—8 7/16 in. long, 5 in. wide. Hinge case, iron—9 1/8 in. long, 4 5/8 in. wide, 3 1/16 in. deep. Cement case, cast iron—9 1/16 in. long, 5 in. wide, 3 1/4 in. deep.

No. 13 Hinge Dimensions—Floor plate, wrought bronze or brass; hinge case, iron; cement case, cast iron; same as No. 12.

No. 14 Hinge Dimensions—Floor plate wrought bronze or brass—10 1/16 in. long, 5 in. wide. Hinge case, iron—11 1/8 in. long, 4 5/8 in. wide, 3 1/16 in. deep. Cement case, cast iron—11 5/8 in. long, 5 in. wide, 3 1/4 in. deep.

No. 15 Hinge Dimensions—Floor plate wrought bronze or brass—11 7/8 in. long, 5 1/2 in. wide. Hinge case, iron—12 1/8 in. long, 5 in. wide, 3 3/8 in. deep. Cement case, cast iron—13 1/16 in. long, 5 7/16 in. wide, 3 5/8 in. deep.

Note: Nos. 12 and 13 hinges priced without cement cases; cement cases priced separately. Nos. 14 and 15 priced with cement cases. *Specify hand of doors.*

No. 4 Pivot

No. 5 Side Pivot for Segment Head Doors

Nos. C13, C14, C15 Single Acting Center Hung Checking Floor Hinges, Compression Spring Type

For light interior doors, exterior and vestibule doors hung singly or hung in groups without mullions.

Compression oil-tempered spring, crank action, spindle seated in a ball bearing, speed of door controlled by accessible needle valve.

Doors hung in groups without mullions should be equipped with door stays to keep the swing of the door within a 90° radius.

Door Sizes (Wood or Kalamein Doors)—No. C13 for doors not over 3 ft. x 7 ft. 6 in. x $1\frac{3}{4}$ in. thick. No. C14 for doors not over 2 ft. 8 in. x 7 ft. 6 in. x 2 in. thick. No. C15 for doors not over 3 ft. 6 in. x 7 ft. 6 in. x $2\frac{1}{2}$ in. thick.

No. C13 Hinge Dimensions—Floor plate, wrought bronze or brass— $9\frac{3}{4}$ in. long, 5 in. wide. Hinge case, iron— $9\frac{1}{8}$ in. long, $4\frac{7}{8}$ in. wide, $3\frac{1}{8}$ in. deep. Cement case, cast iron— $9\frac{1}{8}$ in. long, 5 in. wide, $3\frac{1}{4}$ in. deep.

No. C14 Hinge Dimensions—Floor plate wrought bronze or brass— $11\frac{1}{2}$ in. long, 5 in. wide. Hinge case, iron— $10\frac{1}{8}$ in. long, $4\frac{7}{8}$ in. wide, $3\frac{1}{8}$ in. deep. Cement case, cast iron— $11\frac{1}{4}$ in. long, 5 in. wide, $3\frac{1}{4}$ in. deep.

No. C15 Hinge Dimensions—Floor plate, wrought bronze or brass— $13\frac{5}{8}$ in. long, $5\frac{1}{2}$ in. wide. Hinge case, iron— $12\frac{5}{8}$ in. long, 5 in. wide, $3\frac{3}{8}$ in. deep. Cement case, cast iron—13 in. long, $5\frac{7}{8}$ in. wide, $3\frac{5}{8}$ in. deep.

Note: Specify hand of doors.
No. C13 priced without cement case.

Nos. C14 and C15 priced with cement case.

Blue print templates furnished on request.

No. 1 Pivot

**Nos. 18 and 19 Offset Arm Single Acting Checking Floor Hinges, Torsion Spring Type**

Crank spindle seated in a ball bearing; spring tension adjustment.

This type hinge will permit the door to be opened to 180° and is non-hold open but can be furnished hold-open if specified.

The top pivot, No. 6 is ball bearing.

Priced with cement case.

Door Sizes—No. 18 for medium and heavy interior doors not over 3 ft. 6 in. wide. No. 18 for entrance and vestibule doors not over 2 ft. 10 in. wide. No. 19 for heavy entrance and vestibule doors over 2 ft. 10 in. wide.

No. 18 Hinge Dimensions—Hinge floor plate— $8\frac{1}{8}$ in. long $5\frac{1}{8}$ in. wide. Cement case, iron— $10\frac{1}{8}$ in. long, 5 in. wide, $3\frac{3}{8}$ in. deep.

No. 19 Hinge Dimensions—Hinge floor plate— $9\frac{7}{8}$ in. long, $6\frac{1}{8}$ in. wide. Cement case, iron— $11\frac{1}{8}$ in. long, $5\frac{7}{8}$ in. wide, $4\frac{1}{8}$ in. deep.

Note: For Segment Head Doors No. 7 Side Pivot will be furnished instead of No. 6 Top Pivot. This Pivot can be used as a Supplementary or Side Pivot. Specify hand of doors.

No. 6 Pivot

No. 7 Pivot

Nos. C18 and C19 Center Hung Single Acting Checking Floor Hinges, Torsion Spring Type

For entrance and vestibule doors hung in groups without mullions.

Non-hold open unless hold-open is specified.

No hardware shows on the face of the door, and the floor plate centers under the door.

All working parts operate in non-freezing, lubricating checking fluid.

Specify hand of doors. Priced with cement case.

Door Sizes—No. C18 hinge for medium and heavy interior doors not over 3 ft. 6 in. wide. No. C18 hinge for entrance and vestibule doors not over 2 ft. 10 in. wide. No. C19 hinge for heavy entrance and vestibule doors over 2 ft. 10 in. wide.

No. C18 Hinge Dimensions—Floor plate, wrought bronze or brass— $10\frac{1}{4}$ in. long, $5\frac{1}{8}$ in. wide. Cement case, cast iron— $10\frac{1}{8}$ in. long, 5 in. wide, $3\frac{3}{8}$ in. deep.

No. C19 Hinge Dimensions—Floor plate, wrought bronze or brass— $11\frac{1}{4}$ in. long, $6\frac{1}{8}$ in. wide. Cement case, cast iron— $11\frac{1}{8}$ in. long, $5\frac{7}{8}$ in. wide, $4\frac{1}{8}$ in. deep.

DOOR CLOSERS and DOOR CHECKS.

For Bommer Spring Hinges and Pivots for all kinds of doors, also Strikes, Bolts, Latches

TRADE MARK

Reg. U. S. Pat. Office

and Fittings for lavatory units in office buildings, hospitals, theaters, public buildings, etc., see Manufacturers' Index in the front of this volume.

"BOMMER RELIABLE DOOR CLOSERS"

"Bommer Reliable Door Closers" embody entirely new mechanical ideas. They are simple, have few parts and are practically unbreakable. The powerful compression spring positively closes the door and requires no adjustment. The greater checking area prevents slamming. The speed is controlled by the regulator.

The arm, a steel drop forging, has a hardened steel ball bearing roller traversing the cam. The cam design gives powerful action and controls the door. The construction is mechanically correct. All parts are made of materials best suited for their particular purpose. Accurate workmanship insures proper functioning of all parts.

All Bommer Door Closers are reversible and may be used right or left hand without changing any part of the mechanism, and are easily applied by following the templet and simple instructions packed with each door closer and check.

First—they can be adjusted to control the door to a uniform speed from the open position to the jamb, so there is no perceptible noise when the door comes in contact with the jamb.

Second—they can be adjusted to control the door at a uniform speed from the open position to the jamb where the latch comes in contact with the strike. This allows all the spring energy to be exerted in overcoming the latch resistance with the result that the door closes and is not left open at the latch point.

The automatic hold-open feature in the "Bommer Reliable Door Closer" eliminates the use of floor stops, hooks or other devices generally used to hold doors open.

Every closer is tested for mechanical efficiency before leaving the factory and is guaranteed against defects in material or workmanship.

Size and Classification of Door Closers

No. 61—For light doors, screen doors, telephone or coupon booth doors, etc.

No. 62—For pantry or kitchen doors, inside or office doors not over 7x3 ft.

No. 63—For vestibule doors, heavy inside doors, outside doors not over 7x2½ ft.

No. 64—For large interior doors, store doors, outside doors not over 7½x3 ft.

No. 65—For doors not larger than 7½x4 ft.

No. 66—For extra large outside doors (exposed to heavy draft).

These specifications apply to doors under normal conditions. If the door is unusually heavy, or is subject to strong drafts, use one size larger than is specified.

Finishes

Regularly furnished in gold bronze. At the same price (when so ordered) they will be supplied in maroon bronze, symbol MB; silver bronze, symbol XB; or dull black, symbol JD. Can also be furnished in other finishes and cast bronze at an additional price. Suffix symbol for finish. For description of finishes, see our pages on Spring Hinges listed in Manufacturers' Index in the front of this volume.

Method of Attaching Bommer Reliable Door Closer and Check

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Soffit Bracket "S"

Corner Bracket "C"

Flush Bracket "F"

Fig. 1—Shows the closer as regularly furnished, applied on the inner or hinge side of door. This method of applying is recommended wherever the condition permits. When applying, the closer may be so placed that the door can be opened to 130° before it will automatically remain open.

Fig. 2—Soffit Bracket "S" should be used where the door opens outward and cannot be applied to the hinge side of door. The soffit bracket and closer may be so placed that the hold-open feature is effective at any determined point between 90° and 165°. The width of the foot or base for attaching to the soffit No. 62 and No. 63 closer is 1¼ in., No. 64 to No. 66 is 1½ in.

Fig. 3—Corner Bracket "C" should be used where the door opens outward, and cannot be applied to hinge side of door. The bracket is securely fastened to both the jamb and soffit. When bracket and closer are so applied, the arm may be adjusted so that the hold-open feature is effective at any determined point between 135° and 165°. The width of the corner brackets for all size closers to attach to the soffit is 1½ in.

Fig. 4—Flush Bracket "F" should be used when the soffit is not sufficiently wide to furnish a footing for the soffit or corner bracket. When applying, the closer can be so placed that the door may be opened to 130° before it will automatically remain open.

Hold-open Feature—The Door Closers No. 61 to No. 65, inclusive, have the hold-open feature, but if desired without this feature and if so ordered, a stop piece with a setscrew will be furnished that can be fastened to the cam to eliminate the hold-open feature.

The Door Closer No. 66 is furnished regularly without the hold-open feature, but if so ordered, will be furnished with a special cam that will hold door open.

Key Adjustment

These closers and checks can be furnished with a key adjustment so that only possessors of key may change valve adjustment.

BOMMER RELIABLE DOUBLE ACTION DOOR CHECK NO. 68

For use on doors hung with double action spring hinges, it permits the door to swing in both directions. No. 68 is a checking device only and has no spring; the necessary power for closing the door is furnished by the spring hinges; the check controls the closing speed and brings the door quietly

to rest on the center without any oscillation, thus eliminating noise and greatly reducing draughts.

Its construction embodies features identical with those in the "Bommer Reliable Door Closer," except the spring is omitted and the main arm has a knuckle joint.

This permits the door to swing free in both directions; the arm passes over the top of the door when the door is moved in the direction of the check and drops below the soffit of the door frame when the door swings in the direction opposite. A door guide pivot and socket is furnished to keep the door in proper relation with the frame.

This device is most useful for entrance doors to stores and public buildings.

Soss Invisible Hinges

Soss invisible hinges are specially desirable for finer work, for secret panels, in fact, wherever the obtrusiveness of an ordinary visible butt is objectionable. They are mortised into the door and jamb and when the door is closed, are entirely invisible, giving *beauty without interruption*. With Soss invisible hinges, no metal projects at either side of the door, and there is no wide crack when the door is open, for these hinges fit into a mortise. Soss invisible hinges also offer a safety feature of unusual value—when the door is closed, there is no way of reaching the hinges. As an added advantage, Soss invisible hinges require no extra effort or labor to apply—they are mortised into the same part of the door and jamb as the ordinary butt.

To all these features of the Soss invisible hinge is added extraordinary strength and carrying power, due to its short leverage and sturdy construction.

Metal and fireproof doors

Years of use have proved that doors hung with Soss hinges will not sag, nor will the hinges themselves wear down under heavy loads.

A templet, the use of which insures an accurate mortise, is furnished with each pair of hinges.

Types—Soss Invisible Hinges are supplied in three types, irrespective of plating finish, as follows:

Rufkast: our standard hinge with smooth surfaces, but not ground or polished.

Blunt: on our blunt hinges, the hinge plates are ground and polished.

Polished: on the polished type, not only the plates but the links or connecting members of the hinge are ground and highly polished, producing a product of superior finish.

Standard finish for all of the above types of hinges is dull brass, but we can supply them in any special finish desired at an additional charge. Prices for special finishes on application.

Specified Everywhere in the Best Work

Soss invisible hinges are extensively used in the finest residences, office and public buildings, hotels, store fixtures, cabinet work and furniture. They have been adopted by many of the foremost architects and furniture manufacturers in the country.

The Corbin Organization

P. & F. Corbin was founded in 1849 and for years has been one of the best known hardware manufacturers in the country. We manufacture a complete line of builders' hardware, which enables an architect to specify our goods, for an entire building. Dealing with one company for the complete hardware requirements of a building has the advantage of placing the responsibility for service and quality of product in one place. Furthermore when making an addition to a building it simplifies securing material of the same design, finish and operation to that originally used.

Good Buildings Deserve Good Hardware

A Complete Condensed Hardware Catalogue for Architects

This catalogue has been prepared by a consulting architectural standardist in conjunction with the best hardware experts of our organization. It is a complete catalogue in a condensed and concise form for the special use of the architectural profession. All unnecessary products and data of no interest to the architect have been omitted. The descriptive matter has been condensed, in many cases to tabular form, so that it is possible to make comparisons, especially in locks, which were previously difficult for anyone except a hardware specialist.

The designs have been arranged in groups according to periods which enables the architect to make a comparison of a number of designs of one period in a small space. All cheap shelf hardware has also been omitted which assures the architect that any product selected from the catalogue will be of good quality. A general catalogue, sent on request, lists all Corbin products.

Architectural Service by Hardware Specialists

At our general office and at each of our branch offices, we have a staff of men who are specialists in hardware and who have had long experience with hardware requirements for all types of buildings. Their experience is at the service of the architect without obligation. Their advice is of value as they are in constant touch with the latest improvements in hardware.

If the architects' office is at a distance from our offices, we suggest that a set of plans with a general idea as to the type of hardware and hardware allowance be sent to our nearest office. A complete hardware schedule will be made up and an estimate submitted on request.

Prices in Catalogue

The prices given in this catalogue are list prices and are included for purposes of comparison only. They apply to finishes B, CB, DB, HB, WB, A, CA, EA, KA, and WA as shown on Plate 3. Prices on other finishes on application.

PLATE 2

DESCRIPTION OF FINISHES

Specify Finish by Prefixing Symbol to Number

FOR CAST AND WROUGHT BRONZE

Finish Symbol	Description
B	Natural Color
AB	Aged or Old English Bronze
CB	Natural Color, Fine Wheel (Ship Finish)
WB	Natural Color, Medium Wheel (Ship Finish)
DB	Natural Color, Dull
SB	Natural Color, Sanded
HB	Statuary Light
SHB	Statuary Light, Sanded
RHB	Statuary Light, Sanded, High Parts Polished Suitable only for ornamental designs Use "SHB" for plain goods to match
KB	Statuary Medium
SKB	Statuary Medium, Sanded
RKB	Statuary Medium, Sanded, High Parts Polished Suitable only for ornamental designs Use "SKB" for plain goods to match
LB	Statuary Dark
SLB	Statuary Dark, Sanded
RLB	Statuary Dark, Sanded, High Parts Polished Suitable only for ornamental design Use "SLB" for plain goods to match
CR	Chromium Plated

Finish Symbol	Description
DCR	Chromium Plated, Dull
E	Nickel Plated, Polished
2E	Nickel Plated, Oxidized, Relieved and Sanded, Edges and High Parts Polished. Apply only to certain designs
DE	Nickel Plated, Dull
KE	Nickel Plated, Oxidized and Relieved Suitable only for ornamental goods Use "DE" for plain goods to match
SKE	Nickel Plated, Oxidized, Relieved and Sanded
SE	Nickel Plated, Sanded
HPE	Imitation Half-Polished Iron
WEH	Imitation Fresh Forged Iron for wrought bronze only
MHD	Imitation Half Polished Iron to match HD finish
DG	Gold Plated, Dull
IG	Imitation Gold
R	Antique Copper
DS	Silver Plated, Dull
KS	Silver Plated, Oxidized and Relieved
V	Verde Antique
HV	Verde Antique, High Lights Relieved

FOR CAST AND WROUGHT BRASS

A	Natural Color
AA	Aged or Old English Brass
CA	Natural Color, Fine Wheel (Ship Finish)
WA	Natural Color, Medium Wheel (Ship Finish)
EA	Natural Color, Dull
SEA	Natural Color, Sanded
KA	Oxidized and Relieved Suitable only for ornamental goods Use "EA" finish for plain goods to match

SKA	Oxidized and Relieved, Sanded
2A	Oxidized and Relieved, Sanded Edges and High Parts Polished Applied only to certain designs Use "SKA" for plain goods to match
RKA	Oxidized and Relieved, Sanded High Parts Polished Suitable only for ornamental designs Use "SKA" for plain goods to match

BRASS AND BRONZE WITHOUT LACQUER

NL	Indicates "No Lacquer." For example, "DBNL"
OR	Indicates "Oil Rubbed." For example, "DBOR"

NICKELINE

NK	Composition Cast White Metal, Highly Polished
----	---

BOWER BARFF FINISHES

F	Genuine Bower Barff or Black Iron Applied to iron and steel, but designated by prefixing this symbol "F" to catalog numbers for cast and wrought bronze
---	--

KF	Imitation Bower Barff or Black Iron Applied to bronze, iron, and steel
----	---

FOR STEEL AND IRON

Amber, Coppered, Japanned, Galvanized, Dead Black, and White Enamel finishes are furnished only on articles so described in Catalog and are applied to unpolished surface.

A	Brass Plated
EA	Brass Plated, Dull
KA	Brass Plated, Oxidized and Relieved Suitable only for ornamental goods Use "EA" finish for plain goods to match
SKA	Brass Plated, Oxidized and Relieved, Sanded
2A	Brass Plated, Oxidized and Relieved, Sanded Edges and High Parts Polished Applied only to certain designs Use "SKA" for plain goods to match
RKA	Brass Plated, Oxidized and Relieved, Sanded High Parts Polished Suitable only for ornamental designs Use "SKA" for plain goods to match
B	Bronze Plated
DB	Bronze Plated, Dull
HB	Bronze Plated, Statuary Light
SHB	Bronze Plated, Statuary Light, Sanded
RHB	Bronze Plated, Statuary Light, Sanded High Parts Polished Suitable only for ornamental designs Use "SHB" for plain goods to match
KB	Bronze Plated, Statuary Medium
SKB	Bronze Plated, Statuary Medium, Sanded

RKB	Bronze Plated, Statuary Medium, Sanded High Parts Polished Suitable only for ornamental designs Use "SKB" for plain goods to match
LB	Bronze Plated, Statuary Dark
SLB	Bronze Plated, Statuary Dark, Sanded
E	Nickel Plated, Polished
2E	Nickel Plated, Oxidized, Relieved and Sanded, Edges and High Parts Polished. Apply only to certain designs
DE	Nickel Plated, Dull
KE	Nickel Plated, Oxidized and Relieved Suitable only for ornamental goods Use "DE" for plain goods to match
SKE	Nickel Plated, Oxidized, Relieved and Sanded
MHD	Imitation Half Polished Iron to match HD finish
R	Antique Copper
C	Coppered (Listed)
D	Dead Black (Listed)
G	Electro-Galvanized (Listed)
J	Japanned (Listed)
Y	Amber (Listed)
W	White Enamel (Listed)
AL	Aluminum Bronze for door checks only
MR	Maroon for door checks only

POMPEIIAN FINISHES

The Pompeian Finish is the result of the application of a special process to articles of our regular line, creating a new and startlingly original decorative effect. The surface is treated to give it a delicate lacy pattern in flat relief and both the texture and color bear a resemblance to the result of exposure to the elements. The rich and often somber tints are such as are caused by the corrosive action of the air through long periods of time.

Each piece is individual in treatment, the surface of no two

being alike. The distribution of color will also vary slightly, preserving a uniformity of appearance but with difference in shades which enhance the general effect.

This finish is seen to best effect when applied to hardware with a plain surface or with designs which have no finely modeled details.

Finish symbols are the same as for our regular brass or bronze finishes, using the prefix "P" to signify the Pompeian surface.

PHB Finish
(Pompeian, Light Statuary Bronze)

PB Finish
(Pompeian, Bronze, Natural Color)

PT Finish
(Pompeian, Bronze, Tapestry)

PA Finish
(Pompeian, Brass, Natural Color)

PKE Finish
(Pompeian, Nickel Plated, Oxidized and Relieved)

PVB Finish
(Pompeian, Bronze, Verde Antique)

PLB Finish
(Pompeian, Dark Statuary Bronze)

PVA Finish
(Pompeian, Brass, Verde Antique)

PRI Finish
(Pompeian, Bronze, Rusty Iron)

COLOR EFFECTS IN HARDWARE

PLATE 4

POLYCHROME FINISHES

The application of color to the depressed portions of the surface permits endless combination of tints in pleasing effects. Any arrangement of colors can be provided with variations of shades to suit the most exacting taste. They can be made to conform to the colors associated with the decorative period of the design; they can be made to harmonize with the color scheme of the decorations of the building; they can provide a brilliant dash of color to relieve a monotony of appearance. There is no limit to the variations which can be made.

This finish should be employed only on designs which have depressions which will receive the color with metal exposed in

the higher levels. No fixed system of symbols for combination of color has been found possible, the treatment depending upon the desire of the purchaser. The Corbin artists will co-operate in the creation of any effect desired. The treatment of all pieces of the same kind in any order will be identical. We have employed the designation of Polychrome for this treatment, as indicative of many colors in which it can be produced.

The treatment brings into relief delicate detail in the ornamentation. In heraldic designs the actual colors of the originals, or those approved by the organizations whose emblems are used, can be applied with fidelity.

ENTRANCE DOOR HANDLE LOCKSETS

Cast Bronze

SECTIONAL, FOR RESIDENCE AND STORE ENTRANCE AND VESTIBULE DOORS

The illustration at the left shows the use of sectional handles on both sides of the door, while that on the right shows handle one side and knob on the other.

Double Handle Sets

This combination with handles on both sides of the door is commonly used on store doors and in some cases on large main entrance doors. The handle on the outside adds to and is in keeping with the heavy appearance of the door. Both handles afford a better grip for opening the door. If a knob were used, the strain on the shank when opening heavy doors would be too great and would, in a short time, affect its operation.

Any of the handles illustrated below or included on the preceding and following pages may be used.

A number of locks may be used with these handles. Those particularly suited for store door sets are shown and described on Plate 40.

Handle and Knob Sets

This combination with a handle on the outside and a knob on the inside of the door is generally used on residence entrance and vestibule doors. The handle adds to the exterior appearance and the knob harmonizes with the interior finishing.

Any handle shown on this, the preceding and following pages may be used in this installation. A large number of knobs of either metal or glass, with rose or escutcheon, are suited for this combination and may be chosen from those shown on Plate 25.

The locks best fitted for this service may be found on Plate 51.

KNOB ATTACHMENTS AND TYPES OF SPINDLES

Plain or Standard Type

Knobs are attached to spindle by screws which pass through knob shanks and are screwed into spindle, drawing knobs tight against it. Three holes in each end of spindle give range of adjustment of 1 in. Washers under ends of knob shanks eliminate end play. Used on all knobs, with exceptions noted on knob pages

PW Type

Outer knob is fastened to spindle by a pin which is covered by thimble on the rose. Inner end of spindle and shank of inner knob are threaded and knob is screwed down to the correct adjustment. It is held in place by a cone-pointed set screw which enters a groove in the spindle. Range of adjustment 1 in. Used with round one-piece, wrought knobs

Glass Knob Type

Both knobs are screwed on the spindle to the correct adjustment and held in place by cone-pointed set screws which enter grooves in the spindle. Shanks are bracketed into rose with all side play eliminated. Range of adjustment 1/2 in. Glass knobs are also supplied with standard type of shank and spindle when so ordered

PH Type

Outer knob is fastened to spindle by a pin which is covered by thimble on the rose. Inner knob is secured by a pin which is passed through knob shank and hole in spindle giving nearest correct adjustment. Rose and thimble are separate pieces both screwed on a sleeve which is bracketed on knob shaft. Rose is attached to door, sleeve turned to a close fit and locked by screwing thimble tight against rose. Range of adjustment 3/4 in. Used with round, one-piece, wrought knobs with cast shank and cast knobs, with exceptions noted on knob pages

PY Type

Outer knob is fastened to spindle by a pin which is covered by thimble on the rose. Inner end of spindle and shank of inner knob are threaded and knob is screwed down to the correct adjustment. It is held in place by a cone-pointed set screw which enters a groove in the spindle. Range of adjustment 1 in. Long thimbles bracketed to knob shank give smooth, easy action under close adjustment. Used with round, one-piece, wrought knobs with cast shank and cast knobs with exceptions noted on knob page

LH Type

Outer handle is fastened to spindle by a pin which is covered by thimble on the rose. Inner handle is secured by a set screw terminating in a dowel pin which passes through the spindle into the opposite side of shank. Adjustment is obtained by changing length of spindle by means of a screw in the swivel. State thickness of door when ordering. Used for lever handles with exceptions noted on lever hand handle pages and for No. 3000 locks for unusually heavy service

PLATE 28

CORBIN LOCKS

P. & F. CORBIN make a lock for practically every condition or place where any degree of security must be provided. On the following pages are illustrated a complete line of Corbin Locks which are of interest to the architectural profession. All other locks have been omitted.

The locks have been arranged in groups according to the special use for which they are designed such as for public buildings, office buildings, etc. Under each heading or group a short description of the features which are required for the particular service is given. The locks in each group are also indexed so that a lock for any type of door is readily found and a selection of locks of different

qualities for the same service is also given in a table.

The arrangement of the locks is entirely different from that generally given in the regular hardware trade catalogue. It is written entirely from the user's viewpoint. Each group is arranged so as to give the architect first the highest type of lock and that giving the greatest protection. Other locks follow in order of quality, protection and price. The differences between each lock are described so that a selection is easily made.

It is hoped the new arrangement will save time and a clearer understanding of the differences between the locks will be obtained.

GENERAL INFORMATION AND NUMERICAL INDEX OF LOCKS

Prefix Letters for Finish. Description of Finishes, Plate 3

STANDARDIZED TEMPLATE LOCKS FOR HOLLOW METAL DOORS

For several years there has been under discussion the establishment of standard sizes of locks for hollow metal doors. The door manufacturers have wished to be relieved of the detail caused by the wide variety of sizes and shapes of locks which has made the manufacture of each door individual, and has prevented interchangeability. Working with the Advisory Committee on Builders' Hardware of the Bureau of Commerce we, in conjunction with some other lock manufacturers have adopted standards on locks principally used, which have been approved by The Hollow Metal Association as giving them the relief desired, and sanctioned by the American Institute of Architects as permitting architects to have the necessary freedom in design. The Associated General Contractors have also approved these standards.

This standardization applies only to locks and their strikes, and covers those in most general use. It is still possible to have locks used which are not included in this plan, but they are special in the metal door manufacturers' estimation, and should not be used when the desired functions can be secured with the certified template locks. The door manufacturers have provided standard reinforcements for these certified template locks and their strikes.

The fronts and strikes of these locks are uniform as to length, width, thickness and spacing of screw holes; cases are uniform as to backset. The length, width and thickness of cases fall within certain maximum and minimum dimensions prescribed by the standardization rules. The spacing between cylinder hole and knob hole will vary in the different types of locks, and is not standardized. The strikes are flat. The hollow metal jamb manufacturer will spot weld a box to his frame, over which our flat strike will be applied.

The members of the Hollow Metal Association have been provided with Certified Template Drawings of these locks and will be kept informed of any changes. It is therefore not necessary to provide them with template drawings. When specifying any of these locks, simply mention the number and add TMS.

STANDARDIZED TEMPLATE LOCKS

PLATE 30

DEFINITIONS OF LOCK TERMS

The following definitions are in amplification of the illustrations and descriptions on the following plates. The terms apply mostly to special features on cylinder locks

Types of Lock Fronts

Flat Front—The flat face or front is at right angles to the body or case of the lock. Locks with flat fronts are generally reversible.

Bevel Front—This front is on a standard bevel of $\frac{1}{8}$ in. on 2 in.; any other bevel is special and is subject to an extra charge. Lock No. 1364 and higher grade furnished standard bevel without extra charge. Bevel front locks are not reversible; state hand according to diagrams below.

Rabbeted Front—Made with $\frac{1}{2}$ in. standard rabbet for doors with rabbeted meeting stiles. Rabbeted fronts other than standard are furnished at an extra charge. When ordering send full size detail of special rabbet. Not reversible, state hand.

Recessed Front—As shown in illustration, the front is recessed and the strike plate projected, which protects the latch or dead bolt from being forced.

Stops in Face →

Types of Latches

Easy Spring—See illustration. This is the simplest type of latch bolt and is used in most good locks. It latches easily and is operated by a spring separate from that operating the knob. Used in both bitted key and cylinder locks.

Anti-friction—A small additional latch connected to the regular latch bolt, in high grade cylinder locks, which engages the strike and retracts the regular latch. It prevents friction between latch bolt and strike and permits easy closing of door.

Auxiliary Latch—A supplementary latch used for dead locking the latch bolt of cylinder locks which do not have dead bolts. The auxiliary latch does not engage the strike, but when the door is closed it is forced back, automatically dead locking the latch bolt which cannot be forced back as long as the door is closed. It does not prevent key or knobs from operating the latch bolt.

Stops—Consist of two buttons in the lock front. Used to make the outside knob operative or inoperative by pushing in one or the other of the two stops, thus locking or unlocking the door.

THE CORBIN PIN TUMBLER CYLINDER LOCKS AND MASTER KEYING SYSTEM

It is a well-known fact that with the advent of the cylinder lock a general and inexpensive means of security was produced which it had not previously been possible to secure.

Corbin has not only been one of the pioneers in the development of the cylinder lock but has perfected a cylinder lock which allows the use and variation of a master keying system previously considered impossible.

Two types of cylinders are made, the standard type cylinder and the large master cylinder. The difference between the two types is that the standard cylinder has the standard size single plug in which the key and pins fit while the large master cylinder has an additional heavy ring surrounding the plug. The extra ring doubles the number of changes and master keying facilities of the cylinder. This permits the adequate master keying of large office buildings, hotels, hospitals, institutions, etc., without duplicating the keying system on one or more floors. The standard cylinder affords the same master keying possibilities as all others of the same class, but we recommend the use of the large cylinder where an extensive master keying system is required. In both types of Corbin cylinders the key-way extends through the entire length of the plug which is cut from a solid bar. The highest degree of accuracy in the fitting of the key is necessary.

The spring pressed pins bolt the plug to the shells and the variation in the length of the pins makes the great number of key changes possible. The first two pins are balanced directly on balls, a Corbin invention. When the key is inserted, the balls roll in

their place, and impart a directly upward movement to the pins. Practically no resistance is offered to the entrance of the key and the amount of wear is greatly reduced.

Essential Features of a Master Keying System

The use of a master keying system has become general wherever there are many doors through which it is desired to limit passage to groups or individuals. In a hotel, for instance, each room will have a guest key which is different from all others in the building; each floor will have a different master key for its chamber maid; each wing or group of floors under a housekeeper will have a grand master key different from the others; and the office will have a great grand master key or emergency key which will open all doors. In hospitals, office buildings, apartments, etc., a similar system, or one even more elaborate, may be installed.

The use of the Corbin Master Keyed Cylinder provides an absolute certainty that the number of changes required will always be satisfactorily supplied. It is essential however that all future expansion be considered when a schedule for such a system is being prepared. There have been instances in the past where no expansion was considered and the

schedule originally installed would not permit the required increase of key changes. In such cases the entire system has to be changed to provide for the increase. This entails an expense that could have been avoided had the Corbin representative been advised of the possible expansion.

Parts of Corbin Master Cylinder

253 1/2 Master Cylinder

253 Standard Cylinder

Function of the Various Keys in the Corbin Master Keying System

Great Grand Master Key opens any door in the entire system. Each *Grand Master Key* opens any door in its division, and no other.

Each of the *Master Keys* opens any door in its own floor or group of buildings, and no other.

The *Service Keys* may be either (a) single or (b) sets of identical keys, as desired.

Special Keys (where individual service alone is desired) are not master keyed. These and the *Service Keys* will open no door other than the one for which they are individually designed.

Locks on desks, cabinets, etc., can be fitted to the *Service Key* of the corresponding house, department, etc.

CORBIN CYLINDER LOCKS—MASTER KEYING SYSTEM

Prefix Letters for Finish. Description of Finishes, Plate 3

PLATE 32

TYPES OF CORBIN BITTED KEY LOCKS

**Type A**

A lock for inside doors, ensuring privacy and a proper degree of security for general use

**Type B**

A one-tumbler lock for inside doors. Secure, with easy-latch and firm knob spring action. Also made 3-tumbler and master-keyed

**Type C**

A 3-tumbler lock with light, resilient spring on the latch bolt and a stronger spring on the knob action

**Type D**

A heavy, master-keyed, 3-tumbler lock, with long, lively easy spring on the latch bolt and a quick, snappy knob action

Corbin locks of this type have 3 methods of changing the key combination; (1) projections on the side of the keyhole and corresponding cuts or channels in the bit of the key to enable it to enter the lock; (2) projections placed on the inside of the case, and cuts in the end of the bit of the key to enable it to pass; (3) the use of lever tumblers which must be lifted by the key before it can move the bolt, and which the key must raise to exactly the right point. All of these 3 factors can be changed in location and form, making a like change in the key necessary. The number of possible variations depends largely on the kind of lock, and the number of tumblers, and is increased in many locks by employing end wards, side wards and lever tumblers in combination in the same lock. Corbin bitted-key locks can be obtained with the maximum number of key changes possible with this type of mechanism and with functions suited to the doors they are required to secure.

All parts of the mechanism are finely pro-

**Type E**

A lock for use with lever handles, having a strong French spring on the hub to insure a quick return of the handle to horizontal position

portioned and accurately adjusted. The tumblers, in addition to limiting the use of the key, lock the dead bolt firmly in either the thrown or retracted position.

The roll-backs actuated by the knob have abundant leverage and retract the latch bolt easily, the strong spring giving a quick and positive return when the knob is released. The latch bolt has a lighter resilient spring, and the impact of the latch bolt with the strike causes a minimum of resistance to the closing of the door. Every detail has been carefully developed in order that the user of a Corbin lock may have security, proper service and absence from trouble as long as the lock is in use.

The illustrations show the varying forms of the principal elements in locks of this type. Various functions are added by changing the mechanism, to adapt the locks to the manifold demands of the complex existence of today, and Corbin locks can be supplied that will answer perfectly and conveniently any requirement of the most exacting conditions.

TYPICAL PARTS OF CORBIN LOCKS

**Type D Lock**

Names of the various parts are indicated and the terms "spacing" and "backset" graphically defined

**Cylinder Front Door Lock**

CORBIN UNIT LOCKS

Rigid, One-Piece, Factory Assembled Units

The Unit lock set is assembled at the factory in one piece, with knobs and escutcheons attached; it is shipped as a unit and is applied to the door as a unit. The fine and accurate adjustments of the skilled lockmakers are never disturbed.

Unit locks are made in a large variety of functions to suit all purposes, with knobs and escutcheons in the Corbin designs and in any of the Corbin finishes. They cover all

the requirements of high-grade door locks. The form and the fact that the adjustments are undisturbed make it possible to introduce features which could not otherwise be adopted. The result is a superior type of mechanism, a smoothness of action, a freedom from trouble, and a degree of security which place the Corbin Unit locks in a separate and distinct class which has never been equaled. Among their distinguishing characteristics are the following:

Construction Details and Installation

The Mechanism—Is exceedingly simple. The accompanying illustration of a typical lock interior shows how few the parts are and their direct action. A frame, a latch bolt with tail piece, a spring, two rollbacks, a spindle, and a cylinder in the outer knob—these with the knobs and escutcheons make a No. 2467 lock for inside doors. Other types have additional parts to perform additional functions, but the same general form and simplicity is maintained in all.

The Heavy One-Piece Cast Bronze Frame—Holds all parts firmly in place. The moving parts are all attached to the frame, instead of being laid into a case, and are accurately machined to operate without loss of motion. The depth of the chamber in the frame permits all parts to be so arranged as to give a direct action with an easy spring and a positive smoothness which is found elsewhere only in high-grade safe locks.

Interior of Unit Lock

The Heavy Cast Bronze Escutcheons—Make the door stronger at this point than at any other.

The Strike—Is a heavy bronze casting, with a protecting flange against which the inner edge of the lock rests. The box or recess made to receive the latch bolt is accurately spaced and fits it snugly, holding the door closely against the stop. The strike is of the protected type, making it impossible to force back the latch bolt from the outside when the door is closed.

Heavy Cast Frame

Swinging Latch Bolt

The Long, Swinging Latch Bolt—Offers little frictional resistance to the strike, and protrudes far enough to engage the strike in the event of the door shrinking.

The Coiled Spring gives a quick, snappy action with a slight turn to the knob.

The Outer Knob—Contains a Corbin ball-bearing cylinder—the highest development in key mechanism. It can be supplied with or without master key and in any number of changes desired. Both knobs have close adjustment and cannot work loose or rattle.

Outer Knob

Inner Knob

The Inner Knob—Carries a locking ring, which, when turned, makes the outer knob rigid. In other types the locking is accomplished in various ways, all simple and positive in action.

The Unit Lock is Adjustable—For variations in thickness of doors.

Door Prepared for Unit Lock Set

With cut made in the edge to contain the lock case

Unit Lock Set Applied to Door

Entire rigid unit held firmly in place by means of the escutcheon screws

Installing

The method of attaching is one of the most evident of the advantages obtained through the form of the Unit lock. There is no mortise made in the door, but a piece is cut out of the edge of the door of the exact size of the lock case. This is accomplished in a very few minutes with an ordinary saw and chisel, and does not require special skill. An ordinary workman can attach a Unit lock to the finest veneered door without danger of injuring the surface. After the cut is made, the lock set is slipped into place just as it comes from the box without detaching the knobs and escutcheons, or changing any of the adjustments. The adjusting screw is then tightened, bringing the escutcheons in close contact with the sides of the door, and the escutcheons are screwed to the door. The lock is always true and straight with the door, and presents a finished appearance. The knobs are also in proper relation to the lock as the bearings into which the knob shanks fit are a part of the heavy cast bronze frame, and project through the sides of the door, to the knobs, the shanks having but four one-thousandths of an inch of play.

CORBIN UNIT LOCK CONSTRUCTION

PLATE 34

FOR OFFICE DOORS

Illustrations
one-fifth size

The locks for this service are divided into groups according to the method of controlling the outside knob. They are furnished with reverse bevel for doors opening out when so ordered. Not reversible, state hand and thick-

ness of door. Furnished in complete locksets with knobs and escutcheons in various designs. Catalogue numbers for America Design only shown below.
Master Keying—In sets as desired with other Corbin master-keyed cylinder locks.

Outside Knob Controlled by Stops in Face of Lock

No. 02464—Latch bolt is operated by knob from either side and by key from outside at all times. Has auxiliary latch which prevents forcing the bolt when door is closed but does not prevent key or knobs from operating latch bolt.

No. 02464 $\frac{1}{4}$ —Same as 02464 but with thumb knob on the inside which locks against the key.

No. 2464—Similar to 02464 but without auxiliary latch.

No. 2464 $\frac{1}{4}$ —Same as 02464 $\frac{1}{4}$ but without auxiliary latch.

FOR ENTRANCE DOORS TO RESIDENCES, APARTMENTS, ETC.

No. 2445—Has easy spring latch bolt, stops in face and dead bolt. Latch bolt is operated by knob from either side, both bolts operated by key from outside at all times. Outside knob locked by stop in face. Dead bolt locked from inside by thumb knob.

FOR HOTEL CORRIDOR DOORS

No. 02436 1/4—Has button indicator, stop in face and auxiliary latch with standard functions.

Operated by knob from either side and by guests', maids', housekeepers' and emergency key from outside.

Thumb knob on inside deadlocks against all keys except emergency, and at same time thrusts forward button indicator on outside escutcheon. Thumb knob inoperative unless door is closed.

When locked by thumb knob inside, exit may be had by merely turning the inside knob, which automatically releases all locking mechanism except stop work.

Emergency key operates lock at all times.

FOR COMMUNICATING DOORS

No. 2455—Latch bolt operated by knob from either side. Thumb knob on the inside deadlocks latch bolt. This lock is reversible except when escutcheons are of a design which cannot be inverted.

No. 2455 1/4—Same as 2455 except that it has a thumb knob on each side. Each knob locks against the opposite side deadlocking the latch bolt.

UNIT LATCHES

No. 2488 1/2—A latch without keys. Latch bolt can be operated by knob from either side at all times.

This latch is reversible except when escutcheons are of a design which cannot be inverted. Furnished in complete locksets with knobs and escutcheons in various designs. Catalogue numbers for America Design only shown below.

COUPON BOOTH LOCKS, DOOR CHECKS AND HOLDERS COUPON BOOTH LOCKSETS

For Doors to Coupon Booths in Banks, etc.

4056

No. 4056—Unit lockset, operated by knob from the inside at all times. Outside knob is always rigid. An auxiliary latch automatically locks the latch bolt so that it cannot be forced back when the door is closed, but does not prevent key or knobs from operating latch bolt. The door must be at least 1 3/8 in. thick.

The indicator in the escutcheon operates the same as that on No. 4055.

With or without master key.

No. 4055—Cylinder lockset complete with knobs and escutcheons operated by key from the outside and by knob from the inside at all times. The outside knob is always rigid. Door must be at least 1 3/8 in. thick. Lock has indicator which when set by attendant shows white when the door is opened and also while the booth is occupied. When the inside knob is turned and the booth vacated a red indicator is automatically set for the attention of the attendant.

4055

Case: No. 4056, bronze; No. 4055, japanned iron.
Front, Bolt, Knobs, Cylinder and Escutcheons: No. 4056, cast bronze; polished; No. 4055, bronze.
Keys: Nickel silver.

GENERAL CONSTRUCTION

Latch Bolt: No. 4056, swinging type; No. 4055, easy spring.
Reversible: No. Specify hand. *Knobs:* Two, 2 1/4-in. diameter.
Escutcheons: Two, bronze, with indicator one side; No. 4056, 8x2 1/2 in.; No. 4055, 7x2 1/4 in.

COUPON BOOTH DOOR CHECKS AND HOLDERS

For regular door check, see Plate 71

Door Check Applied

A holding device for use with ordinary door checks on coupon booth doors but is not required with the above Corbin check. Holds the door slightly ajar when set, indicating

Door Checks

Designed to hold the door partly opened, indicating that the booth is ready for use. Closes it when the occupant leaves, locking the door. The door remains locked until the attendant prepares the booth for the next occupant and sets the door ajar.

Cat. No.	Material	Finish	Door
101 3/4	Cast iron	*Columbia bronzed	Regular
102 3/4	Cast iron	*Columbia bronzed	Heavy
111 3/4	Cast iron	Polished and plated	Regular
112 3/4	Cast iron	Polished and plated	Heavy

*Can also be finished in plated finishes.

376 Door Holder

No. 376 Door Holder

the booth is unoccupied. When the door is opened a trigger drops allowing the door to be closed by the door check. After the booth is unoccupied the attendant sets the holder again.

CORBIN VAULT HANDLE LOCKS AND CATCHES

An Excellent Locking Device for Switch Boxes, Metal Lockers, Cabinets, Safes, etc.

Triplelox

No. S7210 3/4—Three-point catch. Pin tumbler locking mechanism. One-eighth or one-quarter turn. Spring action on bolts. Key may be withdrawn at any time.

Top and bottom bolts or guides not supplied.

No. S7210 1/2—Same as S7210 3/4 but for one-quarter turn only. Can also be used as a catch with key withdrawn and mechanism unlocked.

No. S7210—Same as S7210 3/4 but without spring action on bolts. Key may be with-

S7210

drawn only when bolts are in locked position.

No. S7210 1/2—Same as S7210 3/4 but without spring action and without pin tumbler locking mechanism. Can also be used as one-point catch with three-point feature omitted, when so desired.

Nos. S7400 3/4, S7400, S7400 1/2—Same as Nos. S7210 3/4, S7210 and S7210 1/2 respectively, but furnished with special spindle and without cam, for applying to tongue and groove or step doors.

GENERAL CONSTRUCTION

Finish: Cast bronze, highly polished and lacquered; or in other finishes as ordered.

Handle: 2 3/4 in. width; solid bronze, cast solid with spindle.

Rose: 1 1/2-in. diameter. *Projection:* 1 1/8 in.

Special Lock Nuts: For fastening top and bottom bolts and cam to handle, can be furnished.

Cam: 1 1/8 in. from center to end of cam (1 3/4 in. if so ordered).

Extension Spindle: (Nos. S7400 3/4, S7400, S7400 1/2) 1 3/8 in. from base of rose to end of spindle.

Reversible: By inverting the cam.

One Point Catches

Nos. S7407 3/4, S7407, S7407 1/2—Same handle and finishes as Nos. S7210 3/4, S7210 and S7210 1/2, but with one-point, self latching catch.

GENERAL CONSTRUCTION

Finish: Cast bronze, highly polished and lacquered; or in other finishes as ordered.

Handle: 2 3/4 in. width; solid bronze, cast solid with spindle.

Rose: 1 1/2-in. diameter. *Projection:* 1 1/8 in.

Case: Cast iron, japanned. 2 1/4 x 1 1/4 x 3/4 in. *Bolt:* Cast iron.

Backset: 1 3/8 in. *Reversible:* By inverting the catch.

PLATE 38

LOCKS FOR PUBLIC BUILDINGS

CHURCHES HOSPITALS STORES LIBRARIES CLUBS FACTORIES
 FRATERNAL MUSEUMS WAREHOUSES BANKS GOVERNMENTAL INSTITUTIONS
 For Office Buildings, Hotels, Apartment Houses, Schools and Residences, see special classification

Selection of Proper Hardware for Public Buildings

A long experience gained in supplying buildings of these types enables us to offer expert advice in regard to the hardware best suited for each service. We are glad to place this experience at the service of the architect without obligation. A hardware expert from one of our branch offices or agencies will be glad to advise in regard to hardware for any of this group of buildings. We suggest, whether our hardware is finally selected or not, that we be consulted before the architect starts to write the hardware specification.

Quality and Finishes

On account of the general hard usage to which hardware is subjected in public buildings, it is necessary to select hardware which will prove satisfactory after many years of use. The design and finish must be attractive as it is seen by many critical people. The finish selected must be one that will wear well and give years of service. The question of design is of course best settled by the architect but for the proper finish which will last we should be consulted before the final selection is made.

INDEX TO LOCKS FOR PUBLIC AND OFFICE BUILDINGS

Arranged in groups according to quality. Group 1 is the highest grade. For catalogue numbers of unit locks in America Design Locksets see plates 35 and 36

**Bitted key locks, cannot be master keyed with other locks in the group.

†Latch bolts have ¾-in. throw, approved by New York Board of Fire Underwriters.

CYLINDER KNOB LOCKS FOR ENTRANCE DOORS

If handle and thumbpiece are to be used, see locks in group following this

No. 572—Has anti-friction latch bolt operated by knob from either side at all times. The latch bolt and dead bolt are operated by continuous turn of key from either side. Has master cylinders both sides.

No. 572½—Same as 572 except that it has cylinder on outside only and dead bolt is operated from inside by thumb knob.

No. 580—Easy spring latch bolt operated by knob from either side, dead bolt by key from either side. Master cylinders both sides.

No. 581—Same as 580 but with ½-in. rabbeted front.

No. 570—A lighter lock than 572 with standard cylinders on both sides. Easy spring latch bolt operated by knob and dead bolt operated by key from either side.

No. 570½—Similar to 570 but dead bolt is operated by key from outside and thumb knob inside.

No. 0568—Same operation as 570½ except that it is heavier and has master cylinder.

580

CYLINDER HANDLE AND THUMB PIECE LOCKS FOR ENTRANCE AND STORE DOORS

Not for Use with Knobs

A special type of lock is required when handles and thumb pieces rather than knobs are used for front entrance doors. These locks are for this special service.

No. 0288—Has anti-friction latch bolt operated by thumb piece from either side at all times. Dead bolt only operated by key from either side through two standard cylinders.

No. 0189—Same operation as 0288 but has rabbeted front and easy spring latch bolt.

No. 1347—Has anti-friction latch bolt operated by thumb piece from either side. Both latch bolt and dead bolt operated by key from either side at all times. Outside thumb piece locked by stop in face.

No. 1347½—Has anti-friction latch bolt operated by thumb piece from either side and dead

0288

bolt operated by thumb knob from inside. Both bolts operated by key from outside at all times. Outside thumb piece locked by stop in face.

In both 1347 and 1347½ latch bolt is held back by retracting it with key and pushing in top stop when in this position.

Nos. 2347 and 2347½—Same as 1347 and 1347½ respectively, except that they have rabbeted front and easy spring latch bolt.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolt, Strike: Cast bronze, polished.

Cylinder: Bronze.

Keys: Nickel silver.

Latch Bolt: Nos. 0288, 1347 and 1347½, anti-friction.

Nos. 0189, 2347 and 2347½, easy spring.

Reversible: Nos. 0288, 1347 and 1347½, yes.

Nos. 0189, 2347 and 2347½, no.

State hand and thickness of door.

CYLINDER KNOB LOCKS FOR VESTIBULE AND CORRIDOR OFFICE DOORS

High grade locks recommended for all large master keyed jobs such as large office buildings, etc.

Locks with Auxiliary Latch

Especially suited for doors opening out.

No. 0567—Has anti-friction latch bolt operated by knob from either side and by key from the outside at all times. Outside knob is locked by stops in the face.

No. 0567¼—Same as 0567 but with thumb knob inside which deadlocks against operation of key from outside.

No. 0563—Similar to 0567 except that it has easy spring latch bolt and is a slightly smaller lock.

No. 0563¼—Same as 0563 but with thumb knob inside which deadlocks against operation of key from outside.

Locks without Auxiliary Latch

No. 567—Has anti-friction latch bolt which is operated by knobs from either side and by key from outside at all times. Outside knob is locked by stop in face.

No. 567¼—Same as 567 but with thumb knob inside which deadlocks against operation of key from outside.

No. 563—Similar to 567 except that it has the easy spring latch bolt and is a slightly smaller lock.

No. 563¼—Same as 563 but with thumb knob inside which deadlocks against operation of key from outside.

No. 564—Similar to 563 but has 2¾-in. backset and is reversible as the front is not beveled.

No. 566—Similar to 564 but with ½-in. rabbeted front and anti-friction latch bolt.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolt, Strike: Cast bronze, polished.

Cylinders: Bronze.

Keys: Nickel silver.

CYLINDER KNOB LOCKS FOR VESTIBULE AND CORRIDOR OFFICE DOORS*Recommended for Fire Doors. Approved by New York Board of Fire Underwriters*

These are heavy locks for metal covered and other fire doors, have master cylinders and are recommended for all large master keyed jobs. Latch bolt has a $\frac{3}{4}$ -in. throw.

No. 0567 $\frac{3}{4}$ —The better lock for this service. The latch bolt is operated by knob from either side and by key from the outside at all times. The outside knob is locked by stop in face of lock.

It also has an auxiliary latch which automatically locks the latch bolt and stops so that they cannot be forced back when the door is closed, but does not prevent key or knobs from operating the latch bolt.

0567 $\frac{3}{4}$

No. 567 $\frac{3}{4}$ —Same as 0567 $\frac{3}{4}$ except that it does not have the auxiliary latch.

No. 0569 $\frac{1}{2}$ —Same as 0567 $\frac{3}{4}$ except that outside knob is locked by key from inside.

No. 569 $\frac{1}{2}$ —Same as 0569 $\frac{1}{2}$ except that it does not have the auxiliary latch.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolt, Strike: Cast bronze, polished.
Cylinder: Bronze.
Keys: Nickel silver.
Hub: Bronze, $\frac{3}{8}$ -in. swivel.
Latch Bolt: Easy spring, winged.
Reversible: No. State hand and thickness of door.

*Width of case 1 $\frac{1}{2}$ in. more than backset.**CYLINDER KNOB LOCKS FOR VESTIBULE AND CORRIDOR OFFICE DOORS***With Standard Cylinder*

The locks in this group are for similar use to the group of locks under the previous heading, except that this group has the standard cylinder which is recommended for smaller

master keyed jobs. The former group should be used for large office buildings. This group costs less than the previous group.

01339

Locks with Anti-friction Latch Bolt

No. 01339—Especially suited for doors opening out as latch bolt is protected by an auxiliary latch and the outside knob can be locked by stops in the face of the lock. It has an anti-friction latch bolt for ease of operation. The auxiliary latch automatically locks the latch bolt when the door is closed, so that the latch bolt cannot be forced back from the outside, but does not prevent key or knob from operating it. The latch bolt is operated by knob from either side except when outside knob is locked by stop in face of lock. The latch bolt can be operated by key from outside at all times.

No. 1339—Same as 01339 except that it does not have auxiliary latch.

No. 1339 $\frac{1}{4}$ —Same as 1339 except that thumb knob on the inside of door locks against the key insuring privacy.

No. 1338—Same as 1339 except that it has a $\frac{1}{2}$ -in. rabbeted front.

1323

Locks with Easy Spring Latch Bolt

No. 1323—Has the easy-spring latch bolt but does not have an auxiliary latch. The latch is operated by knob from either side and by key from outside at all times. Outside knob is locked by stop in face of lock.

No. 1323 $\frac{1}{4}$ —Same as 1323 except that it has a thumb knob inside which deadlocks against the operation of the key from the outside, thus assuring absolute privacy.

No. 2323—Same as 1323 except that it has a $\frac{1}{2}$ -in. rabbeted front.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolts, Strike: Cast bronze, polished.
Cylinders: Bronze.
Keys: Nickel silver.
Hub: Bronze $\frac{3}{8}$ x $\frac{1}{8}$ -in. swivel.

Latch Bolt: Nos. 01339, 1339, 1339 $\frac{1}{4}$ and 1338, anti-friction.
Nos. 1323, 1323 $\frac{1}{4}$ and 2323, easy spring.
Reversible: Nos. 01339, 1339, 1339 $\frac{1}{4}$, 1338 and 2323, no.
Nos. 1323 and 1323 $\frac{1}{4}$, yes.

CORBIN HOTEL LOCKS

The Importance of the Use of Proper Locks for Hotels

The use of proper locks and hardware is a great factor in the smooth running of a hotel and results in the reduction of claims against the hotel management.

It is poor economy to use cheap locks which can be forced or manipulated by thieves. The cost of one robbery of a room with the resulting loss of reputation to the management would probably more than

offset the cost of a good quality of lock for the entire hotel. Good hardware also gives the guest a sense of security and privacy from intrusion which repays the hotel in good will.

The use of proper locks on doors between communicating rooms is also essential as it determines the character of the hotel. These locks should be under the control of the management in order to protect the reputation of the hotel.

GUIDE TO THE SELECTION OF PROPER LOCKS FOR HOTELS

In order to aid the architect in the selection of a type of lock which will fulfill the requirements for almost any condition arising in hotel work, the diagram and table below are given. The plan is drawn to cover the various combinations of rooms, corridors, bathrooms, foyers, etc., which may occur. Each

condition is lettered and an explanation given in the table below with the locks which best meet the condition.

The difference in functions of the various hotel locks can also be easily seen by comparison in the table at the bottom of the page.

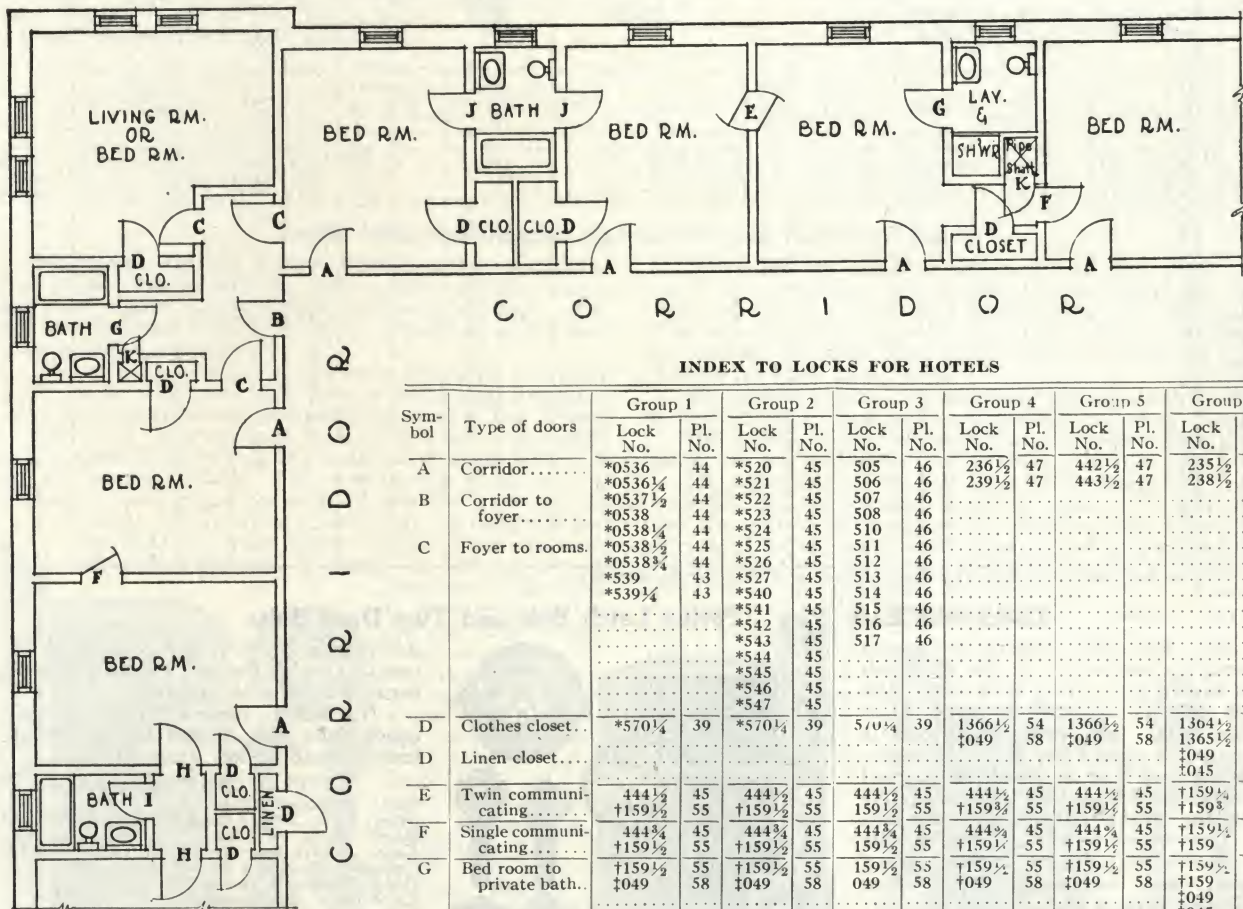

Diagram of Typical Portion of a Modern Hotel Floor Showing Where Each Type of Lock Is Used

PLATE 42

CYLINDER MORTISE LOCKS FOR HOTEL CORRIDOR DOORS

All of the cylinder locks listed under this heading give adequate protection to the hotel guests but some have more functions than others. As the question of protection and

the type of lock is often a matter of preference of the hotel architect and the owners, the locks are grouped in three types according to their functions.

TABLE OF COMPARATIVE FEATURES AND FUNCTIONS OF HOTEL LOCKS

Lock No.	Backset, in.	Cylinder, both sides	Cylinder outside, thumb knob inside	Bitted keys, both sides	Bitted key outside, thumb knob inside	Outside knob always rigid	Outside knob locked by stop in face	Rigid knob acts as indicator when locked from inside	Can be furnished with button indicator	Auxiliary latch prevents latch bolt being forced back from outside	Can be furnished with duplicate guests key operative at all times	Can be furnished with display key	Can be furnished with display key which is operative at all times	Auxiliary latch prevents door from being accidentally locked while opened	When locked from inside emergency key only will operate from outside	When locked from inside grand master key only will operate from outside	When locked by emergency key outside, all other keys are inoperative	When locked by emergency key outside, all keys but display key are inoperative	When locked from inside, all keys are inoperative from outside	When locked from inside, all keys except guest key are inoperative from outside	When locked from inside, all keys except guest and emergency keys are inoperative from outside	When locked from outside by emergency key all other keys but guest key are inoperative	As regularly furnished, when locked by key from inside, key cannot be removed. Can be furnished with key removable when so ordered

*Display key when furnished with these locks, is also operative at all times.

Locks with Easy

No. 539—This lock gives utmost privacy by means of a double dead bolt and has an easy spring latch bolt. The latch bolt is operated by knob from either side. The upper dead bolt is operated by guest's key from the inside. When locked from the inside, key cannot be removed and all keys are inoperative from the outside except emergency key.

Lower dead bolt is operated outside by guest's key, display, master, grand master and emergency key. When locked by display key all other keys except emergency key are inoperative. When locked by emergency key all other keys except display key are inoperative.

Spring Latch Bolt and Two Dead Bolts

Emergency key will unlock door at all times. Display key and button indicator furnished when so ordered.

No. 539 $\frac{1}{4}$ —Same as 539 except that upper dead bolt is operated by thumb knob instead of key from inside.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolts, Strike: Cast bronze, polished.
Bevel: $\frac{1}{8}$ in. on 2-in.

Locks with Easy Spring Latch Bolt, Auxiliary Latch and Dead Bolt

No. 0538—Latch bolt is operated by knob from either side and by guest key, display key, master key, grand master and emergency key from the outside. This master keyed cylinder lock when deadlocked, guarantees absolute privacy to the guest when in the room, except against the emergency key or the display key if one is used. When the dead bolt is locked from the outside by emergency or display keys, all other keys are inoperative. The display key operates its own lock only, at all times, and is furnished only when so ordered. The emergency key is operative at all times.

As regularly furnished guest or display key to dead lock cannot be removed when deadlocked from the inside but can be furnished so that key can be removed, if so ordered. Can also be furnished with button indicator when so ordered.

Stops in the face of the lock control the outside knob so that when the knob is made inoperative the door is locked when closed. It has an easy spring latch bolt and an auxiliary latch which auto-

matically locks the latch bolt when the door is closed. This prevents the forcing of the latch from the outside but does not prevent key or knobs, when operative, from operating the latch bolt.

No. 0538½—Same as 0538 except it does not have stop in face of lock and the outside knob is always rigid.

No. 0538¼—This lock is the same as 0538 but has a thumb knob instead of a key to operate the dead bolt from the inside.

No. 0538¾—Same as 0538¼ except that it does not have stop in face of lock and the outside knob is always rigid.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolts, Strike: Cast bronze, polished.

Bevel: ⅛ in. on 2 in.

Keys: Nickel silver.

Cylinder: Bronze.

Hub: Bronze, ⅝ x ⅞ in. swivel spindle.

Latch bolt: Easy spring.

Reversible: No. Specify hand and thickness of door.

Master Keyed: In sets as desired with other Corbin master keyed cylinder locks.

Indicator: When specified.

Locks with Anti-friction Latch Bolt and Auxiliary Latch

No. 0536—Has one master cylinder outside for extensive master keying system, and special cylinder inside. Has guest, master, grand master and emergency keys. Display key furnished when so ordered. Furnished with button indicator when so ordered.

This type of master keyed cylinder lock assures privacy to the guest, when the latch bolt is deadlocked from the inside, except against the emergency and display key if used.

This lock does not have a dead bolt and the outside knob is rigid at all times. It has an anti-friction latch bolt and an auxiliary latch. The anti-friction latch bolt is operated by a key on the outside and the knob on the inside. The auxiliary latch locks the latch bolt and prevents it from being forced from the outside when the door is closed. It does not prevent

the knob on the inside or key from operating the latch. When the door is open the auxiliary latch automatically dogs the thumb slide so that the latch bolt cannot be accidentally deadlocked.

When the latch bolt is deadlocked by key from the inside, all keys except the emergency and display key are inoperative. When deadlocked from corridor side by emergency or display key all other keys are inoperative. Display key operates its own lock at all times. Emergency key operates all locks at all times.

No. 0536¼—Same as 0536 except that the latch bolt is deadlocked from room side by thumb knob instead of key.

No. 0537½—This lock is somewhat similar to 0536 and 0536¼ but has fewer functions and is a smaller lock.

The anti-friction latch bolt is operated by knob only from the inside, the outside knob is always rigid. It is operated from the outside by guest, master, grand master and emergency keys except when deadlocked by thumb knob inside, in which case emergency and duplicate guest key only are operative. The emergency key does not have the shut out feature as in 0536. Duplicate guest key, which is operative at all times, furnished only when so ordered. Cannot be furnished with button indicator.

The auxiliary latch operates the same as in 0536.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolts, Strike: Cast bronze, polished.

Bevel: ⅛ on 2 in.

Keys: Nickel silver.

Cylinder: Bronze.

Hub: Bronze, ⅝ x ⅞ in. swivel. Nos. 0536 and 0536¼ have ⅞ in. hub also.

Latch Bolt: Anti-friction.

Reversible: No. Specify hand and thickness of door.

Master Keying: In sets as desired with other Corbin master keyed cylinder locks. (Also see text).

Indicators: Nos. 0536 and 0536¼, when specified.

BITTED KEY, MORTISE LOCKS FOR HOTEL COMMUNICATING DOORS

The two locks described in this group are for similar services. One has a split dead bolt, the other a single dead bolt. In each the dead bolt is completely in control of the hotel management by means of a master key. Both are suited for use on single doors between communicating bedrooms or rooms in suites that can be rented separately, if desired.

Master Keying—These locks are set up to master key only. They can be master keyed with other locks having 080 1/4 class master keys.

Lock with Split Dead Bolt

No. 444 1/2—Has latch bolt operated by knob from either side. Each half of the split dead bolt is operated separately by a thumb knob on opposite sides of the door, each locking against the other. Master key deadlocks both halves of the dead bolt either thrown or withdrawn making both thumb

**444 1/2**

knobs inoperative and placing the control in the hands of the management.

Lock with Single Dead Bolt

No. 444 3/4—Has latch bolt operated by knob from either side. Dead bolt is operated by thumb knob from one side only. Master key deadlocks the dead bolt when thrown or withdrawn making the thumb knob inoperative and placing the control in the hands of the management.

**HOTEL LOCKS**

Prefix Letters for Finish. Description of Finishes, Plate 3

PLATE 46

BITTED KEY, MORTISE LOCKS FOR HOTEL CORRIDOR DOORS

The bitted key locks listed under this heading are especially for use on doors from corridor to guest room and offer the greatest security to the guest. With the exception of No. 235½ all locks are of the double dead bolt type with

bolts operated from opposite sides. When the inside bolt is thrown by key or thumb knob, only the emergency key can operate the lock, thus giving absolute privacy to the guest.

High Grade, Bitted Key, Corridor Door Locks

Emergency Key only Will Operate Lock When Locked on Inside

No. 239½—Is the heavier lock and has 5 tumblers. The easy spring latch bolt is operated by knob from either side except that outside knob is rigid when inside bolt is thrown, thus serving the purpose of an extra bolt and indicating that room is occupied. There are two dead bolts. The lower bolt is thrown by guest key from the inside, key cannot be removed, and all keys are inoperative from the outside except the emergency key. Upper dead bolt operated from outside by guest's key, display, master, grand master and emergency keys. When locked with display key, all other keys are inoperative except the emergency key. When locked with the emergency key all other keys are inoperative. The emergency key is operative at all times.

Master Keying—In one set of 2560, all different, with master key to pass, or in 16 sets of 160 each, the 2560 all different, with master keys to pass each set and a grand master key to pass all. Master keyed with other locks having 080¼ class master key. Furnished with display key only when so ordered.

No. 236½—Has 5 tumblers and same key operation as 239½ but is slightly smaller and has the upper bolt operated by thumb knob from the inside instead of by key. When locked by thumb knob from the inside, outside knob is made rigid.

No. 238½—Same as 239½ but a slightly lighter lock with 3 tumblers. Master keyed in 080 7/8 class.

No. 442½—Similar to 236½ except that knobs operate latch bolt at all times. It does not have the display and emergency key. Lower dead bolt locked by key from either side and upper bolt only by thumb knob from the inside. Has 4 tumblers, 640 changes but no indicator features.

No. 443½—Same as 442½ except that when upper dead bolt is thrown by thumb knob from inside it can only be operated by the grand master key from the outside.

239½

GENERAL CONSTRUCTION

Inexpensive, Bitted Key, Corridor Door Lock

No. 235½—This is a light, inexpensive lock for use on doors from corridor to guest room. It does not have the display key feature or the double dead bolt, and cannot be furnished with indicator.

Latch bolt can be operated by knob from either side at all times. Dead bolt is operated by thumb knob from the inside and by guest's, master, grand master and emergency keys from the outside. When locked from inside by thumb knob, all keys are inoperative from the outside except the emergency key. When locked by emergency key all other keys are inoperative.

235½

Master Keying—In 4 sets of 160 each or in 16 sets of 40 each, the 640 all different, with master keys to pass each set and, when so ordered, with a grand master key to pass all. Master keyed with other locks having 080¾ class master key.

LOCKS FOR SCHOOL HOUSES

A table is shown below in which are listed locks which are especially adapted to school house work. All locks for entrance, exit and classroom doors can be operated at all times from the inside.

For exterior doors panic or exit fixture should be used and are generally required by school jurisdiction and fire

laws. For these fixtures and locks refer to section Fire Exit Fixtures.

All locks in a building or in a number of schools may be master keyed in one set with a grand master key over all. Bitted key locks and cylinder locks when used in the same building require different master keying systems.

INDEX TO LOCKS FOR SCHOOLS

The locks for each service are arranged under groups according to quality. Group 1 is the highest quality

*Bitted key lock. Cannot be master keyed with other locks in the group.

CYLINDER LOCKS FOR ENTRANCE OR CORRIDOR DOORS

Since the laws of most communities require the use of exit fixtures on entrance doors, cylinder locks have been especially developed for this service, and are included with the Exit Fixtures in a separate section (see index).

Cylinder locks as indicated in Group 1 are especially recommended for class room and other interior doors on all fine school buildings.

BITTED KEY LOCKS FOR CLASS ROOM DOORS

These locks are designed especially for corridor and classroom doors. They allow free operation of the knob for exit from the class room side at all times but afford required protection from entrance from the corridor side.

All locks have the latch bolt operated by knobs from either side. The inside knob is free to operate at all times. The outside knob can be locked rigid from either side by key.

These locks are furnished separately for convenience in ordering, in complete locksets with knobs and escutcheons in both America and Columbia. Designs as illustrated

below. These designs because of their simplicity have been found very appropriate for this service.

Lock No.	America Set No.	Columbia Set No.	Price Set
1272½	740-796	742-796	\$12.80
1273½	740-798	742-798	12.80
1270½	740-792	742-792	10.55
1271½	740-794	742-794	10.55

1272½
Shown in Columbia Design
Lockset 742-796

No. 1272½—Has the added protection of the auxiliary bolt which automatically dead locks the latch bolt when locked. It prevents the latch bolt from being retracted by any instrument inserted between the face of the lock and strike. When unlocked the auxiliary bolt is held retracted.

Master Keying—In 4 sets of 60 each or in 16 sets of 40 each, the 640 all different, with master keys to pass each set and, when so ordered, with a grand master key to pass all. Master keyed with other locks having 080½ master key.

No. 1273½—Is the same as 1272½ except that it has a different key and fewer changes.

Master Keying—In 5 sets of 50 each, the 250 all different, with master key to pass each set and, when so ordered, with a grand master key to pass all. Master keyed with locks having 195 class master key.

No. 1270½—Has a recessed front with strike to match which gives the same protection to the latch bolt as the auxiliary latch on lock 1272½. The recessed front prevents the retraction of the latch bolt by any instrument inserted between the face of lock and strike.

Master Keying—Same as 1272½.

No. 1271½—Is the same as 1270½ except that it has a different key and fewer changes.

Master Keying—Same as 1273½.

PLATE 48

ASYLUM OR INSTITUTION LOCKS

Illustrations
one-fourth size

These locks have been developed especially for asylums and institutions where the utmost care must be used to prevent picking and manipulating locks. The locks are of cylinder

der and bitted key types which may be master keyed under their own group for either very large or medium size buildings or groups of buildings.

CYLINDER MORTISE KNOB LOCKS

These are master keyed cylinder locks and special master keyed unit locks developed for this service. They may be master keyed with other cylinder locks in the same master key group.

No. 1262—Has bolt operated by knob from either side. Bolt is locked by key from either side, either in thrown or retracted position, so that it cannot be operated by knobs.

Master Keying—In sets with other Corbin master keyed cylinder locks.

No. 2261—Unit lock, has bolt operated by knob from the outside. It has a cup pull on the inside escutcheon for pulling the door closed. Key from the outside locks the bolt in either thrown or retracted position so that it cannot be operated by the knob.

Furnished in America Design Lockset No. 740-598 with horizontal escutcheon.

Master Keying—In sets with other Corbin master keyed cylinder locks.

BITTED KEY MORTISE KNOB LOCKS

These locks are for the same service as the cylinder locks but are of the bitted key type.

No. 0695 $\frac{7}{8}$ —Is the heavier and better lock. It has a latch bolt operated by knob from either side and dead bolt by key from either side.

Master Keying—In 40 sets of 84 each, the 3360 all different, with master keys to pass each set and, when so ordered, with a grand master key to pass all.

No. 1261—Has only the dead bolt which can be thrown by knob from either side. Key locks the bolt from either side, either in locked or unlocked position, so that it cannot be operated by knobs. It has fewer changes than 0695 $\frac{7}{8}$.

Master Keying—In 4 sets of 160 each or in 16 sets of 40 each, the 640 all different, with master keys to pass each set and, when so ordered, with a grand master key to pass all.

ASYLUM LATCHES, BITTED KEY, MORTISE TYPE

These latches are for use from rooms to corridors. The knob is always rigid, and the latch bolt is operated by key

only from either side. As the knobs do not control the latch the door is automatically locked when closed.

1260 3/4

No. 1260 3/4—Is the heavier lock and has the greater number of changes. It also has the auxiliary latch which prevents forcing of the latch bolt, when the door is closed, but does not prevent key from operating latch bolt. It has an easy spring latch bolt.

Master Keying—In 40 sets of 84 each, the 3360 all different, with master key to pass each set and, when so ordered, with grand master key to pass all.

No. 1260—Is a lighter lock than 1260 3/4. It does not have the auxiliary latch but has anti-friction latch bolt. It has fewer key changes than 1260 3/4.

Master Keying—In 16 sets of 40 each, the 640 all different, with master key to pass each set and, when so ordered, grand master key to pass all.

1260

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolt, Strike: Cast bronze, polished.

Tumblers: Wrought.

Key: Nickel-plated steel.

Hub: Bronze, 3/8 in.

Latch Construction: No. 1260 3/4, easy spring. No. 1260, anti-friction.

Reversible: Yes.

Master Keying: See text and table.

ASYLUM LATCHES, BITTED KEY, HALF MORTISE AND RIM TYPES

These latches are both designed for the same service and can be operated only by key from the outside when door is closed. They are of heavy construction with a large

number of key changes for extensive master keying. The spring latch eliminates the necessity of locking the door with a key when leaving the room.

737 1/2

No. 737 1/2 Half Mortise Type—Concealed in the door except for a flush plate on the side. The latch bolt can be reversed for doors opening in.

No. 738 1/2 Rim Type—Secured to the face of the door with the whole case exposed. This latch cannot be reversed.

Master Keying—In 40 sets of 84 each, the 3360 all different, with master key to pass each set and, when so ordered, with grand master key to pass all.

738 1/2

GENERAL CONSTRUCTION

Case: Bronze.

Front, Bolt and Strike: Cast bronze, polished.

Tumblers: Wrought.

Keys: Nickel-plated steel.

Latch Bolt: Easy spring.

Reversible: No, except as noted above for No. 737 1/2, state hand.

Master Keying: With other locks having class 082 3/4 master key.

Escutcheon: Cast bronze, recessed, No. 2594.

ASYLUM LATCHES AND DEAD LOCKS

Prefix Letters for Finish. Description of Finishes, Plate 3

PLATE 50

LOCKS FOR APARTMENT HOUSES

For Index to Residence Locks, see Plate 53

It is just as essential to the owner of an apartment house as it is to the hotel owner that good hardware be used. Locks for apartment houses must also be built to stand hard usage without any of the annoying inconveniences of jamming or otherwise getting out of order and must have a range of selection in types and keying to take care of the particular service under consideration.

It was with these considerations in mind and the wide experience of P. & F. Corbin in equipping all types of apartment houses that the suggestions given in these pages have been made. The architect is free to use the services of P. & F. Corbin experts to assist in selecting the locks which should be used with the various types of apartments such as apartment hotels, co-operative apartments and the regular apartment house, when, as often happens, the different types of apartments require a different treatment for control of the locks.

But in general, all apartment house locks should be under a com-

plete master keying system in order to afford maximum protection and convenience to the management and the tenant.

It is also essential that the keys of the locks of each apartment operate the locks of the main entrance and vestibule doors. The locks on the rear entrance door of each apartment, the storage room, garage, etc. may be keyed alike or all different but they should be subject to the entrance lock key of each individual apartment to which the storage room, garage, etc. belong.

The table at the left applies more to the type where there is a resident manager who furnishes valet, maid, janitor and dining room service. The individual apartment entrance door key, under these conditions, may be subject to the maids master key, and all sets subject to the grand master key controlled by the resident manager.

Locks for Residences—These are often similar in many ways to those used for apartments and may be keyed as described on Plate 53 to take care of various requirements.

CYLINDER LOCKS FOR ENTRANCE DOORS TO APARTMENT HOUSES

The latch bolt is operated by knobs from either side, but the outside knob is also controlled and made inoperative by key when so desired except 01339 1/4 in which the outside knob is always rigid. As the inside knob is always operative it allows exit at all times.

When so ordered the lock can be furnished so that the janitor's or master key only will control operation of outside knob. This is especially desirable in most cases as it allows absolute control of the entrance doors.

This type of lock is better suited for the above service than locks with the outside knob controlled by stop in the face of the lock, as the stops can be changed by any one when the door is open.

Nos. 0567 1/2 and 567 1/2 have master key cylinders and are recommended for large master keyed jobs. Nos. 01339 1/2, 01339 1/4, 01339 3/4 and 1339 1/2 have standard cylinders and are recommended for smaller master keyed jobs.

No. 0567 1/2—For doors

opening out. The latch bolt is operated by knob from either side and by key from outside at all times. The outside knob can be locked and made rigid by key from the inside. An auxiliary latch automatically locks the latch bolt so that it cannot be forced back when the door is closed, but does not prevent key or knobs from operating the latch bolt.

No. 567 1/2—Same as 0567 1/2 but without auxiliary latch.

No. 01339 1/2—Has auxiliary latch and gives the same service as 0567 1/2 but is lighter and is limited in master keying.

No. 01339 1/4—Same as 01339 1/2 but without an outside cylinder. The outside knob is always rigid and the latch bolt is held retracted by turn of key in the inside cylinder.

No. 01339 3/4—Same as 01339 1/2 but without an inside cylinder. Key in outside cylinder locks outside knob. When so ordered can be furnished with cylinder inside to control stop work from the inside instead of outside.

No. 1339 1/2—Same as 01339 1/2 but without auxiliary latch.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolt, Strike: Cast bronze, polished.

Cylinders: Bronze.

Keys: Nickel silver.

Hub: Bronze, 3/8 x 1/2-in. swivel.

LOCKS FOR APARTMENT HOUSES

Prefix Letters for Finish. Description of Finishes, Plate 3

CYLINDER LOCKS FOR APARTMENT CORRIDOR DOORS

These locks are designed for use on the entrance doors to the individual apartments in a large apartment house. They are simple in construction, yet provide adequate protection for the occupants of the apartments.

No. 1324—The latch bolt is operated by knob from either side except when the latch bolt is dead locked by thumb piece from the inside or by key from the outside. Change key will unlock the door from the outside at all times.

1324

No. 1325—Same as 1324 except that it is furnished with an emergency key which is operative at all times and which enables the management to gain access to the apartment in case of emergency.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolt, Strike: Cast bronze, polished.
Cylinders: Bronze.

ELECTRIC DOOR OPENERS

In apartment houses where no janitor service is provided it is customary to keep the front entrance door locked to prevent unauthorized persons gaining access to the building. These door openers permit the door to be opened by anyone in an apartment by merely pushing a button and without going to the door.

Operation is by means of an electro magnet which withdraws the strike when energized by pushing the button. The pusher which is mounted in the jamb opens the door beyond the strike, allowing it to be pushed open, giving admittance.

Regularly furnished to operate on 6 to 12 volts d-c.

630

These openers are also used on gates or any other barrier which it may be desirable to open from a distance.

No. 630—For use with standard mortise cylinder locks 1323, 1339, 563, 0563, 567, 0567, etc.

No. 631—For use with standard unit locks.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front and Trip: Cast bronze, polished.

Opener No.	Front size, in.	Case size, in.	Price, each
630	4 $\frac{1}{2}$ x1 $\frac{1}{4}$	2 $\frac{1}{8}$ x3 $\frac{1}{8}$ x1	\$11.10
631	4 $\frac{1}{8}$ x1 $\frac{1}{2}$	2 $\frac{1}{8}$ x3 $\frac{1}{8}$ x1	13.35

CYLINDER NARROW MORTISE LOCKS FOR EXTERIOR FRENCH DOORS

With French Spring for Lever Handles.

These are high grade cylinder locks built especially narrow for French casement doors and lever handles. They give all the protection of the regular cylinder locks with the small cylinder.

No. 1341—Has an easy spring latch bolt operated from either side by lever handles except when outside handle is made inoperative by stops in face of lock. It is operated from outside by key at all times. The dead bolt is operated by key from outside and by thumb knob from inside.

1341

No. 2341—Same as 1341 but with $\frac{1}{2}$ -in. rabbeted front.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolts, Strike: Cast bronze, polished.
Cylinder: Bronze.
Keys: Nickel silver, 3 class 27.
Hubs: Bronze, $\frac{3}{8}$ x $\frac{1}{8}$ -in. swivel, French spring and $\frac{1}{8}$ in.
Latch Construction: Easy spring.
Reversible: No, state hand and door thickness.
Master Keying: Limited.

CYLINDER MORTISE LOCKS FOR ENTRANCE DOORS

Locks with Knobs Both Sides

No. 1345—A heavy lock with standard cylinder. Antifriction latch bolt operated by knob from either side and key from outside at all times. Dead bolt operated by key from outside and by thumb from inside. Outside knob is locked by stop in face.

No. 1346—Same as 1345 but has ½-in. rabbeted front.

No. 1343—Similar to 1345 but lighter and has an easy spring latch bolt.

No. 1353—Similar to 1343 but has double throw dead bolt.

No. 1354—Similar to 1353 but dead bolt is operated by key from either side.

No. 2343—Same as 1343 but has ½-in. rabbeted face.

No. 01350—A heavy lock for doors opening out. Has easy spring latch bolt, dead bolt and auxiliary latch. Operates same as 1345. Auxiliary latch automatically locks latch bolt when door is closed but does not prevent knob or key from operating latch bolt.

Locks with Handle and Thumb Piece Outside and Knob Inside

No. 1349½—A heavy lock with easy spring latch bolt operated by thumb piece from outside and by knob from inside. The thumb piece is locked by stop in face of lock. Also has dead bolt operated by key from outside and thumb knob inside. Both bolts operated by key from outside at all times.

No. 2349½—Same as 1349½ except it has a rabbeted front. When ordering state hand, as it is not reversible.

No. 1349¼—Similar to 1349½ but is without dead bolt and thumb knob. It is used as a vestibule latch.

No. 1348½—Similar to 1349½ but lighter. It gives the same service.

No. 1348¼—Similar to 1349¼ but lighter. It gives the same service.

GENERAL CONSTRUCTION

Case: Japanned iron. Front, Bolts, Strike: Cast bronze, polished.

Cylinders: Bronze. Keys: Nickel silver.

Hub: Bronze, Nos. 1345, 1346, 1343, 1353 and 1354, ⅝ x ⅞ in. swivel and ⅞ in.

Nos. 1349½, 2349½, and 1349¼, ⅞ in.

Latch Construction: Nos. 1345 and 1346, anti-friction.

Nos. 1343, 1349½, 2349½, 1349¼, 1353 and 1354, easy spring.

Reversible: Nos. 1345, 1346 and 2349½, no. Specify hand and thickness of door.

Nos. 1343, 1349½, 1349¼, 1353 and 1354, yes.

Master Keying: Limited.

BITTED KEY MORTISE LOCKS FOR INTERIOR DOORS

These locks are for similar service. They all have an easy spring latch bolt operated by knob from both sides and a dead bolt operated by key from either side.

They differ in quality and weight of lock, key changes, master keying and flat or rabbeted face. They are arranged according to quality and master keying facilities.

High Grade Locks

No. 1376½—A heavy high grade lock with four tumblers. 2100 changes and master key.

Master Keying—In 6 sets of 350 each, or in 25 sets of 84 each, the 2100 all different with master key for each set and grand master key to pass all.

No. 1375½—A high grade lock similar to 1376½ but has 3 tumblers and is slightly smaller. Has 2184 changes.

Master Keying—In 6 sets of 364 each, or 26 sets of 84 each, the 2184 all different, with master key for each set and, when so ordered, with grand master key to pass all.

No. 1366½—Similar to 1376½ but with 640 changes and different class master key.

Master Keying—In 16 sets of 40 each, the 640 all different, with master key for each set and, when so ordered, grand master key to pass all.

No. 1366—Same as 1366½ but not master keyed.

No. 1365½—A good grade lock similar to 1375½ but a lighter lock with 640 changes and different class master key.

Master Keying—In 4 sets of 160 each, or 16 sets of 40 each, the 640 all different, with master key for each set and, when so ordered, with grand master key to pass all.

No. 1365—Same as 1365½ but not master keyed.

No. 1364½—Similar to 1365½ but with lighter and smaller case.

No. 1364—Same as 1364½ but not master keyed.

Medium Grade Locks

No. 795½—Similar to 1365, with 3 tumblers but is a less expensive lock having iron hub and cheaper construction. It is master keyed and has 250 changes.

Master Keying—In 5 sets of 50 each, the 250 all different, with master key to pass each set and, when so ordered, with grand master key to pass all.

No. 795¼—Same as 795½ but with 36 changes. Not master keyed.

No. 795—Same as 795¼ but with only 1 tumbler and 24 changes.

Inexpensive Locks

No. 785½—A good but inexpensive lock with small case, iron hub, 3 tumblers and 250 changes.

Master Keying—In 5 sets of 50 each, the 250 all different, with master key to pass each set and, when so ordered, with grand master key to pass all.

No. 785¼—Similar to 785½ but with 36 changes, not master keyed.

No. 785—Similar to 785¼ but with 1 tumbler and 24 changes. Not master keyed.

Rabbeted Face Locks

No. 2375½—Same as 1375½ but with ½-in. rabbeted front.

No. 2365½—Same as 1365½ but with ½-in. rabbeted front.

No. 2365—Same as 1365 but with ½-in. rabbeted front.

No. 2364½—Same as 1364½ but with ½-in. rabbeted front.

No. 2364—Same as 1364 but with ½-in. rabbeted front.

No. 2785½—Same as 785½ but ½-in. rabbeted front.

No. 2785¼—Same as 785¼ but ½-in. rabbeted front.

No. 2785—Same as 785 but with ½-in. rabbeted front.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolts, Strike: Cast bronze, polished.

PLATE 54

Illustrations one-fourth size

BITTED KEY MORTISE LOCKS FOR BEDROOM AND BATH ROOM DOORS

Locks with Latch Bolt and Single Dead Bolt

No. 0233½—The heavier and better lock. The latch bolt is operated by knob from either side at all times. The single dead bolt is operated by key from the outside and thumb knob inside. This lock has 4 tumblers and 640 changes.

Master Keying—In 16 sets of 40 each, the 640 all different, with master keys to pass each set and, when so ordered, is supplied with grand master to pass all.

No. 0233—Same as 0233½ but is not master keyed.

No. 233½—Similar to 0233½ but has 3 tumblers.

Master Keying—In 4 sets of 160 each, or in 16 sets of 40 each, the 640 different, with master keys to pass each set and, when so ordered, with grand master to pass all.

No. 233—Same as 233½ but is not master keyed.

Locks with Latch Bolt and Double Dead Bolt

No. 227½—A three bolt lock with a latch bolt operated by knob from either side at all times, and two dead bolts. The upper dead bolt is operated by key from either side and the lower one by thumb knob from the inside only.

Master Keying—In 4 sets of 160 each, or in 16 sets of 40 each, the 640 all different, with master keys to pass each set and, when so ordered, with grand master key to pass all.

No. 227—Same as 227½ but not master keyed.

No. 327½—Same as 227½ except key and changes.

Master Keying—In 5 sets of 50 each, the 250 all different, with master keys to pass each set and, when so ordered, with a grand master key to pass all.

No. 327—Same as 227 except key and changes.

No. 326—Same as 327 except tumblers and changes.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolts, Strike: Cast bronze, polished.

Keys: Nickel-plated steel.

Tumblers: Wrought.

BITTED KEY MORTISE LOCKS FOR COMMUNICATING AND BATH ROOM DOORS

These locks are not master keyed. They are satisfactory for residences and apartment houses and are also used for hotels. They do not give the hotel management the control of the rooms which the master keyed locks do.

See index for communicating door locks with key control.

Two types of locks are illustrated. They both have the

Locks with Split Dead Bolt

No. 159¾—A good grade lock for use between communicating bedrooms. The dead bolt is of the split type, each half controlled separately by thumb knobs on opposite sides of the door, one half dead locking against the other. This lock is not master keyed. Latch bolt is operated by knob from either side.

No. 159¼—Same control as 159¾ but a lighter and cheaper lock.

latch bolt operated by knobs from either side at all times. Those having the split dead bolt are for use between communicating bedrooms or between bedrooms and communicating bathroom, as the locks can be deadlocked from opposite sides. Those having single dead bolt are for use in bathrooms off of bedrooms or halls. They have the bolt controlled from the room side only.

Locks with Single Bolt

No. 159½—A good lock of the same grade as 159¾. It has a single dead bolt operated by thumb knob from one side only. Latch bolt is operated by knob from either side.

Nos. 0159 and 159—Lighter and cheaper locks than 159½. They are for the same service but 0159 has the dead bolt operated from the outside by an emergency key as well as by thumb knob from the inside.

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolts, Strike: Cast bronze, polished.

Key: No. 0159 only; nickel-plated steel.

Hubs: Nos. 159¾ and 159½, bronze, ⅝ and ⅞ in.

Nos. 159¼, 0159 and 159, iron, ⅝ and ⅞ in.

Reversible: Yes.

Latch Bolt: Easy spring, Nos. 159¾ and 159½, type D.

Nos. 159¼, 0159 and 159, type B.

Lock No.	Front		Case size, in.	Backset, in.		Strike, lip to center, in.	Spacing in.	Thumb knob cast bronze	Latch bolt	Price each

*Furnished with one key, class 359½. †Width of case ⅞ in. more than backset.

Illustrations one-fourth size

BITTED KEY NARROW MORTISE LOCKS FOR INTERIOR FRENCH DOORS*With French Spring Hubs for Carrying Lever Handles*

When handles are used on French doors a different type of lock from the regular knob lock is required. These locks are made with a latch bolt having a French spring

which offsets the tendency of the weight of the lever handle to unlatch the door. The locks for this service are made narrow to accommodate the usual narrow stiles of this type of door.

High Grade Locks

No. 01365 $\frac{7}{8}$ —A high grade substantial lock for use with either lever handles or knobs. The easy spring latch bolt has a French spring, controlling the hub. Latch bolt is operated by knob or lever handle from either side. The dead bolt is operated by key from either side. This is a 3 tumbler lock with 640 changes, master keyed.

**01365**

Master Keying—In 4 sets of 160 each, or in 16 sets of 40 each, the 640 all different, with master key for each set and, when so ordered, with grand master key to pass all.

No. 01365—Same as 01365 $\frac{7}{8}$ but is not master keyed.

No. 02365 $\frac{7}{8}$ —Same as 01365 $\frac{7}{8}$ but has $\frac{1}{2}$ -in. rabbeted front. State hand.

No. 02365—Same as 01365 but with $\frac{1}{2}$ -in. rabbeted front. State hand.

No. 0174—Also a high grade substantial lock and differs from 01365 in that the deadlock is operated by thumb knob from one side only instead of by key. The latch bolt is operated by knob or lever handle from either side. Hub has the French spring for lever handles.

**0174**

No. 0174 $\frac{1}{2}$ —Same as 0174 but has $\frac{1}{2}$ -in. rabbeted front. State hand.

Medium Grade Locks

These locks are lighter and less expensive than the previous group and with fewer key changes. They have the French spring hub but hub is made of iron.

No. 787 $\frac{7}{8}$ —Similar to 01365 $\frac{7}{8}$ but lighter and with fewer key changes. Latch bolt operated by knob or lever handle from either side and dead bolt by key from either side.

Master Keying—In 5 sets of 50 each, the 250 all different, with master key for each set and, when so ordered, with grand master key to pass all.

No. 787 $\frac{3}{4}$ —Same as 787 $\frac{7}{8}$ but has 36 changes. Not master keyed.

No. 787—Same as 787 $\frac{3}{4}$ but with 1 tumbler and 24 changes.

No. 2787 $\frac{7}{8}$ —Same as 787 $\frac{7}{8}$ but with $\frac{1}{2}$ -in. rabbeted front.

No. 2787 $\frac{3}{4}$ —Same as 787 $\frac{3}{4}$ but with $\frac{1}{2}$ -in. rabbeted front.

No. 2787—Same as 787 but with $\frac{1}{2}$ -in. rabbeted front.

**2383****Inexpensive Locks**

These locks are an inexpensive and lighter type. They have the French spring hub of iron.

No. 1283—Has 1 tumbler and 12 changes. The latch bolt is operated by knob or lever handle from either side and dead bolt by key from either side. Front is of wrought bronze.

No. 2383—Same as 1283 but with reversible rabbeted front.

No. 0173—Without key. Latch bolt is operated by knob or lever handle from either side, dead bolt by thumb knob from inside only.

No. 0173 $\frac{1}{2}$ —Same as 0173 but with $\frac{1}{2}$ -in. reversible rabbeted front.

**1283****GENERAL CONSTRUCTION**

Case: Japanned iron.

CYLINDER RIM NIGHT LATCHES

Case is made of cast iron, japanned, except Nos. 256 and 256 $\frac{1}{2}$ which are cast bronze, polished. All knobs are wrought bronze.

No. 456 $\frac{3}{8}$ —Has master cylinder and three piece latch. The trip in the center of latch bolt is held retracted by contact with the strike and prevents the latch from being forced when the door is closed. Operated by key from outside and knob inside. The stop deadlocks against the key or holds the bolt retracted.

No. 456 $\frac{3}{4}$ —Same as 456 $\frac{3}{8}$ but standard cylinder.

No. 472—Has a latch bolt with double throw to prevent forcing of the bolt. The screws in the case and strike are concealed and inaccessible when door is closed. Operation same as 456 $\frac{3}{8}$.

No. 474—Same as 472 except bolt has single throw.

No. 256 $\frac{1}{2}$ —Has single throw dead bolt and master cylinder. Case is cast bronze.

No. 256—Same as 256 $\frac{1}{2}$ but with standard cylinder, not master keyed.

No. 356 $\frac{1}{2}$ —Same as 256 $\frac{1}{2}$ but with cast iron case.

No. 356—Same as 356 $\frac{1}{2}$ but with standard cylinder, not master keyed.

MORTISE LATCHES

For Closet Doors

No. 90 $\frac{3}{4}$ —Heavy latch having $\frac{3}{4}$ -in. throw for fire doors. Approved by New York Board of Fire Underwriters.

No. 090 $\frac{1}{4}$ —Heavy latch for exit doors. Has auxiliary latch which prevents forcing.

No. 088 $\frac{1}{2}$ —Heavy latch with anti-friction latch bolt.

No. 048—Has French spring hub for lever handles.

No. 058—Same as 048 but with wrought bronze front.

No. 090—Heavy latch.

No. 049—Similar to 090 but of medium weight.

No. 88 $\frac{1}{4}$ —Somewhat heavier than 090 and has $\frac{1}{2}$ -in. rabbeted front.

No. 045—Light weight, inexpensive latch.

045

For Cabinet Doors

Nos. 68 $\frac{1}{2}$ and 68 $\frac{1}{4}$ —Have flat front and thumb knob.

Nos. 068 $\frac{1}{2}$ and 068 $\frac{1}{4}$ —Same without thumb knob.

No. 68 $\frac{3}{4}$ —Same as 68 $\frac{1}{2}$ but with $\frac{3}{8}$ -in. rabbeted front.

No. 068 $\frac{3}{4}$ —Same without thumb knob.

No. 69—For heavy cabinet door using regular knob.

68 $\frac{1}{2}$

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolt, Strike: Cast bronze, polished, except No. 048 wrought steel, plated front and strike and cast iron brass plated bolt, and No. 058 wrought bronze, polished front and strike and cast bronze polished bolt.

Hub: Nos. 90 $\frac{3}{4}$, 090 $\frac{1}{4}$, 088 $\frac{1}{2}$, 090, 049, 088 $\frac{1}{4}$ and 69, bronze $\frac{1}{8}$ in.

Nos. 68 $\frac{1}{2}$, 68 $\frac{1}{4}$, 068 $\frac{1}{2}$, 068 $\frac{1}{4}$, 68 $\frac{3}{4}$ and 068 $\frac{3}{4}$, bronze $\frac{1}{8}$ in.

Nos. 045, 048 and 058 iron, $\frac{1}{8}$ in.

Latch Construction: Easy spring.

Reversible: Yes.

COLONIAL RIM LOCKSETS FOR INTERIOR DOORS

These locksets have been developed for use in Colonial type dwellings and carry out on interior doors the spirit and motif of the Colonial design. The lock is mounted on the inside face of the door in the manner so general in houses built during the Pre-revolutionary Period. Four screws pass through the corners of the case to fasten the lock to the door. The knob and key escutcheon for the outside of the door carry out the Colonial idea.

No. 2370—Consists of lock 4551 one pair of cast bronze, polished knobs No. 1923, 1 $\frac{3}{4}$ in. in diam. and one rose

2370

and one cast bronze polished escutcheon No. 2667. Easy spring latch bolt is operated by knob from either side, dead bolt by key from either side and thumb bolt by thumb piece from inside.

No. 3370—Same as 2370 but with lock 551 of cast iron.

GENERAL CONSTRUCTION

Case: No. 2370, cast bronze, polished.

No. 3370, cast iron, japanned.

Bolts: Cast bronze.

Key: Nickel-plated bronze.

Latch Bolt: Easy spring.

Hub: No. 2370, bronze, $\frac{1}{8}$ in.

No. 3370, iron, $\frac{1}{8}$ in.

Reversible: Yes.

CYLINDER MORTISE DEAD LOCKS

Furnished with Rounded, Beveled or Armored Fronts

Large Heavy Locks

With Master Cylinder. Recommended for Large Master Keyed Jobs.

No. 133—A high grade lock with cylinder one side only. The bolt is thrown by key from one side only.

No. 133 $\frac{1}{4}$ —Same as 133 but with cylinder both sides. Operated by key from both sides.

No. 133 $\frac{1}{2}$ —Same as 133 but with cylinder outside and thumb knob inside.

No. 130—Similar to 133 but has dead bolt with 1-in. throw and hardened steel insert.

No. 130 $\frac{1}{4}$ —Same as 130 but with cylinder both sides.

No. 1333—Same as 133 but with $\frac{1}{2}$ -in. rabbetted face.

No. 1333 $\frac{1}{4}$ —Same as 133 $\frac{1}{4}$ but with $\frac{1}{2}$ -in. rabbetted face.

No. 1333 $\frac{1}{2}$ —Same as 133 $\frac{1}{2}$ but with $\frac{1}{2}$ -in. rabbetted face.

With Standard Cylinder. Recommended for Small Master Keyed Jobs.

No. 0141—Similar to 133 with standard cylinder one side only.

No. 141—Same as 0141 but with cylinder both sides.

No. 141 $\frac{1}{4}$ —Same as 0141 but with cylinder outside and thumb knob inside.

No. 140—Very heavy lock same as 141 but heavier.

Small Light Locks

With Master Cylinder. Recommended for Large Master Keyed Jobs.

No. 137—A high grade lock with small case and cylinder one side only. Bolt is thrown by key from one side only.

No. 137 $\frac{1}{4}$ —Same as 137 but with cylinder outside and thumb knob inside.

No. 137 $\frac{1}{2}$ —Same as 137 but with cylinder both sides. Operated by key from both sides.

With Standard Cylinder. Recommended for Small Master Keyed Jobs.

No. 138—Similar to 137 with standard cylinder one side only.

No. 138 $\frac{1}{4}$ —Same as 138 but with cylinder both sides.

No. 138 $\frac{1}{2}$ —Same as 138 but with cylinder outside and thumb knob inside.

No. 1138—Same as 138 but with $\frac{1}{2}$ -in. rabbetted front.

No. 1138 $\frac{1}{4}$ —Same as 138 $\frac{1}{4}$ but with $\frac{1}{2}$ -in. rabbetted front.

No. 1138 $\frac{1}{2}$ —Same as 138 $\frac{1}{2}$ but with $\frac{1}{2}$ -in. rabbetted front.

No. 158—Bolt is thrown by key from outside. Thumb knob will withdraw bolt from inside, but will not project it.

No. 158 $\frac{1}{4}$ —Same as 158 but with cylinder both sides. Bolt is thrown by key from either side. Thumb knob will withdraw bolt from inside but will not project it.

*Furnished with beveled, rounded (to 4-in. radius unless otherwise ordered) or armored when ordered.

Armored front size, 6 $\frac{1}{4}$ x $\frac{1}{4}$ in. *Armored front size, 4 $\frac{1}{2}$ x1 $\frac{1}{4}$ in. †Same as 253 $\frac{1}{2}$ except that it has long cam.

*Width of case 1 $\frac{1}{2}$ in. more than backset. **Width of case $\frac{3}{4}$ in. more than backset. ***Width of case 1 in. more than backset.

CYLINDER RIM DEAD LOCKS

Operated by key from outside and turn knob inside except 1434 $\frac{1}{2}$ which operates by key from either side.

No. 1432—Has standard cylinder and a double throw bolt to give protection against forcing. Bolt is steel, polished.

No. 1431—Similar to 1432 but with single throw bolt of cast bronze, polished.

No. 1434 $\frac{1}{2}$ —Has a heavy cast bronze bolt and a standard cylinder both sides.

No. 1434—Same as 1434 $\frac{1}{2}$ but with small cylinder outside and turnknob inside.

No. 360 $\frac{1}{2}$ —Has a master keyed cylinder on the outside and turn knob inside.

No. 360—Same as 360 $\frac{1}{2}$ but with small cylinder.

PLATE 60

MORTISE BITTED KEY DEAD LOCKS

Illustrations
one-fourth size

These Locks are All for the Same Service which is Similar to the Mortise Cylinder Dead Locks Previously Described

Heavy Locks

No. 0147½—With heavy bolt operated by key from either side. Master keyed with Asylum locks. Has 4 tumblers and 3360 key changes.

0147½

Master Keying—In 16 sets of 40 each, the 640 all different, with master key for each set and, when so ordered, with grand master key to pass all.

No. 0145—Same as 0145½ but not master keyed.

Light, Inexpensive Locks

No. 132½—A light dead lock operated by key from either side. Has 3 tumblers and 640 key changes.

Master Keying—In 4 sets of 160 each, or in 16 sets of 40 each, the 640 all different, with master keys for each set and when so ordered, with grand master key to pass all.

No. 132—Similar to 132½ but not master keyed.

No. 0132½—Similar to 132½ but lighter, with different key and fewer changes.

Master Keying—In 5 sets of 50 each, the 250 all different, with master key for each set, and when so ordered, with grand master key to pass all.

No. 0132—Same as 0132½ but not master keyed.

No. 0131—Similar type to 0132 but a cheaper lock. Has 1 tumbler and 200 key changes, not master keyed.

0131

Medium Heavy Locks

No. 144½—Similar in operation to 0145½ but lighter and with smaller bolt.

Master Keying—In sets same as 0145½.

No. 144—Same as 144½ but not master keyed.

No. 1144—Same as 144 but with ½-in. rabbeted front.

No. 1144½—Same as 144½ but with ½-in. rabbeted front.

No. 1372½—Similar to 144½ but has 3 tumblers and 2184 key changes and is master keyed.

Master Keying—In 6 sets of 364 each, or 26 sets of 84 each, the 2184 all different, with master keys to pass each set and, when so ordered, with grand master key to pass all.

Medium Heavy Locks with Thumb Knob

The locks in this group differ from those in the previous groups in that they have a thumb knob as well as a key. Dead bolt is operated by key from either side. When projected the bolt can be withdrawn by thumb knob from inside, but thumb knob will not project the bolt.

These locks are especially useful in hospitals for operating room and corridor doors to patients rooms for it is impossible to accidentally lock the door.

No. 149¼—Has 4 tumblers and 640 changes.

Master Keying—In 16 sets of 40 each, the 640 all different, with master key to pass each set and, when so ordered, with grand master key to pass all.

No. 148½—Same as 149¼ but with 3 tumblers.

Master Keying—In 4 sets of 40 each, the 640 all different, with master key to pass each set and, when so ordered, with grand master key to pass all.

148½

GENERAL CONSTRUCTION

Case: Japanned iron.

Front, Bolt, Strike: Cast bronze, polished.

Tumblers: Wrought.

Keys: Nickel-plated steel.

Hub: Nos. 149¼ and 148½, only bronze, ⅜ in.

Reversible: Yes.

Master Keying: See table and text.

SLIDING DOOR LOCKS—GARAGE LOCKS

Prefix Letters for Finish. Description of Finishes, Plate 3

PLATE 62

THREE-POINT LOCKS FOR HOLLOW METAL DOORS

**Strike for Top Bolt and Trip**

In ordering state thickness of door (A) and recess (B). If with trim state (C) and (D)

enter sockets in the rear edge of the door. This gives six points at which the door is securely bolted to the frame. The interval between these points, and the fact that the bolts and studs extend $\frac{3}{4}$ in. from the jamb, effectually prevent any possibility of door becoming unfastened by warping through heat.

**Strike for Latch Bolt****Strike for Center and Bottom Bolts**

This device is made for use in steel doors leading to stairways and elevator enclosures. It furnishes protection in case of fires by preventing warping from heat which may cause the door to open. Three bolts are distributed at intervals along the front edge and are supplemented by three steel studs which the door manufacturer supplies and attaches to the jamb, which

**Tubes for Screws Holding Escutcheons**

GENERAL CONSTRUCTION

Lock Case: Japanned iron.

Unit Plate and Parts: Wrought steel, galvanized.

Lock Front, Bolt, Strike: Cast bronze, polished.

Dead Bolts: Tool steel galvanized, $\frac{3}{4}$ in. diam., $\frac{3}{4}$ in. throw. Top bolt has anti-friction roller.

Spacing of Bolts: (Center to center) top to center bolt 27 in., center to bottom bolt 36 in., center to latch bolt 7 $\frac{1}{2}$ in.

Knobs: Cast bronze, polished, 2 $\frac{1}{2}$ in. diam., escutcheons 9x3 $\frac{1}{4}$ in. cast bronze polished.

Push Bar: No. 3001 cast bronze, polished.

Cylinder: Bronze.

Keys: Nickel silver, 3 class 27.

Hub: Swivel $\frac{3}{8}$ in.

Latch Bolt: Broad and heavy, 1 $\frac{1}{4}$ in. wide, $\frac{3}{4}$ in. throw.

Reversible: No. Specify hand, thickness of door and width of stile which should be not less than 5 in. No. 3001 specify also width of door.

Master Keying: In sets as desired with other Corbin, master-keyed, cylinder locks.

Installation—All parts are mounted on a steel unit plate and adjusted for use before leaving the factory. The device is slipped into the hollow stile of the door and attached by eight machine screws in the edge of the door. The front of the lock, the three bolt heads and the trip are the only parts visible. The screws which fasten escutcheon to door enter tubes which reach from one side of interior to the other preventing bending of the metal stile when screws are tightened.

No. 3000—Furnished with one pair of knobs and two escutcheons all cast bronze, polished. Operates by knob from either side. Key in cylinder outside locks outside knob and has no other function. All bolts are retracted simultaneously by knobs and are automatically projected by closing the door.

No. 3001—Furnished with one exit push bar, one knob and one escutcheon all cast bronze polished. Operated by knob from outside and exit bar inside. Exit bar inside is always operative. Key and bolt functions same as in 3000.

PLATE 63**THREE-POINT LOCKS**

Prefix Letters for Finish. Description of Finishes, Plate 3

CORBIN FIRE EXIT DEVICES

Corbin Automatic Exit Fixtures

These fixtures provide a ready exit and can be operated at all times from the inside even when locked against entrance. They yield to a light pressure so that a child can operate them with ease. They are applied to doors opening outward.

Originally designed to prevent loss of life through panics, they are now required upon exits of buildings wherever people congregate. They are especially adapted for theatres, schools, churches, office and public buildings, loft buildings and factories.

EXIT PUSH BARS FOR SINGLE DOORS AND MOVABLE LEAF OF PAIR OF DOORS

For Use with Locks on Exit and Entrance Doors

These bars are all for the same service. Pressure on the horizontal bar retracts the latch bolt of the lock allowing the door to open. They cannot be used when top and bottom bolts are desired.

No. 2351½—A neat fixture made to fit close to the door. Lock is operated in the same manner as if thumb piece was used.

This design is not made to match with exit bolts for use with double doors.

2351 ½

GENERAL CONSTRUCTION

Fixture: Cast bronze, polished, wrought bronze bar.

Escutcheon: 8½x2¼ and 4x2¼ in.

Horizontal Bar: ¾-in. tubing.

Reversible: No, state hand.

Price, each: \$22.00.

INSIDE VIEW

OUTSIDE VIEW WITH KNOB AND ESCUTCHEON

OUTSIDE VIEW WITH SECTIONAL HANDLE

OUTSIDE VIEW WITH OUT OUTSIDE TRIM

No. 02352½—Heavy bar which matches with exit bolts and may be used on movable leaf of double doors. Latch bolt can be held in retracted position by means of special key.

All bronze, polished.

No. T02352½—Same but unpolished.

No. 03352½—Same but all iron, plated.

No. D03352½—Same but all iron, dead black finish.

02352 ½

GENERAL CONSTRUCTION

Fixture: All bronze: Nos. 02352½ and T02352½.

All iron: Nos. 03352½ and D03352½.

Brackets: 5½x2¾ in. and 2½x2¾ in. Requires stiles at least 4½-in. wide.

Horizontal Bar: 1-in. tubing.

Reversible: No, state hand.

Price, each: No. 02352½, \$22.00; No. T02352½, \$18.35.

No. 03352½, \$16.00; No. D03352½, \$13.35.

EXIT PUSH BARS

Prefix Letters for Finish. Description of Finishes, Plate 3
For Other Items and Complete Details, see Corbin General Catalogue

PLATE 64

AUTOMATIC EXIT SETS FOR SINGLE DOOR, AND PAIR OF DOORS WITH ONE DOOR ACTIVE

These sets are a combination of 02352 and 02352½. No. 02352 has the push bar with top and bottom bolt for use on the inactive door. No. 02352½ has the push bar with lock for use on the active entrance door. Sectional handle or knob and escutcheon are furnished for use on the outside of this door with locks No. 1386, 1387 and 1380. Door Pull is used with lock No. 1385. Locks furnished with these sets for double doors have open back strike, allowing either door to open independently of the other.

For complete details and sets with iron fixtures, see Corbin General Catalogue.

For General Construction, see plates 64 and 66.

Operation by Key and Sectional Handle or Knob from Outside

Operation of Sets for Single Doors—By exit push bar from inside at all times. Knob or thumb piece outside is controlled by key in inside cylinder. When knob is locked, entrance may be had by turning key in outside cylinder, which retracts the latch bolt but does not release the knob. The auxiliary latch prevents forcing of the latch bolt when door is closed, but does not prevent key or push bar from operating latch bolt.

Operation of Sets for Pair of Doors—Similar to the above except that push bar operates both doors from inside at all times, and key in outside cylinder operates only the active door.

Operation by Door Pull from Outside When Bolt Is Held Retracted by Key

On these sets latch bolt can be locked in a retracted position and door operated by door pull from the outside. A door check of the proper size should be used with these sets to hold the door closed when latch bolt is held in the retracted position.

75286

Operation of Sets for Single Doors—By exit push bar from the inside at all times. Key in cylinder outside retracts the latch bolt and auxiliary latch and holds them retracted. When latch bolt is held retracted, door can be operated from outside by door pull.

Operation of Sets for Pair of Doors—Similar to the above except that push bar operates both doors from inside at all times and key in outside cylinder operates only the active door.

PLATE 65

EXIT BOLTS AND SETS

Prefix Letters for Finish. Description of Finishes, Plate 3

EXIT BOLTS FOR SINGLE AND PAIR OF DOORS

Have top and bottom bolts which are retracted by pressure on horizontal bar, allowing the door to open. Bolts held in retracted position as long as the door is open. When the door closes, the bolts are automatically projected into the strikes except when they are locked in retracted position by means of the key.

For Exit Only

No. 02352—Used without lock or outside trim on doors for exit only. May be used on both leaves of double doors or on standing leaf with 02352½ on moving leaf. All bronze, polished.

No. T02352—Same as 02352 but unpolished.

No. 03352—Same but all iron, plated.

No. D03352—Same but all iron, dead black finish.

02352
02354
03352
03354

Operation by Key and Knob from Outside

No. 02354—Similar to 02352 but with unit type knob on outside which retracts bolts so that the door may be used for entrance. A complete turn of the key (A) makes the knob inoperative. The knob should always be used to retract the bolts from the outside as the key (A) is furnished to lock and unlock the knob only. May be master keyed with any Corbin master keyed cylinder lock. All bronze, polished.

Knob and Escutcheon for 02354 and 03354

Escutcheon, 6x3 in.
Knob, 2½ in. diam.

Key (A)

No. 03354—Same but iron, plated, with knob and escutcheon cast bronze, polished.

No. D03354—Same but iron, dead black finish, with knob and escutcheon cast bronze, polished.

GENERAL CONSTRUCTION

Fixture: All bronze: Nos. 02352, T02352 and 02354.
Iron: Nos. 03352, D03352, 03354 and D03354.

Bolt Rods: ⅝-in. diam.

Horizontal Bar: 1-in. tubing.

Brackets: 5½x2½ in. and 2½x2½ in.; Nos. 02352 and T02352 require stiles at least 3½ in. wide and No. 02354 requires stiles at least 4 in. wide.

Top Case: 5¼x2½ in.

Top Strike: With return for stop ½ in. thick.

Height of Bar: 38 in. above floor.

Reversible: No, state hand.

Price, each: No. 02352, \$38.30; No. T02352, \$21.50; No. 02354, \$56.00; No. 03352, \$19.35; No. D03352, \$16.10; No. 03354, \$34.65; No. D03354, \$30.65.

Operation by Key, Lever and Door Pull from Outside

Bolts are retracted at top and bottom by lever from the outside. A complete turn of key (A) in the lever makes the lever inoperative. A complete turn of key (A) in the opposite direction again releases the lever.* The lever should always be used to retract the bolts from the outside as the key (A) is furnished to lock and unlock the lever only and should not be used to operate the bolts.

Pressure on the horizontal bar on the inside automatically retracts bolts at top and bottom, at all times, in which position they are held as long as the door is open. When the door closes, the bolts are automatically projected into the strikes, except when they are locked in retracted position by means of key (B), during which time the door operates as a free door.

No. 02344—Used with lock and outside trim on doors for both exit and entrance. May be used on single door, both leaves of double doors or on standing leaf of double doors with 02352½ on moving leaf. All bronze, polished.

No. 03344—Same as 02344 but iron, plated, with lever, pull and plate cast bronze, polished.

No. D03344—Same as 02344 but iron, dead black finish, with lever, pull and plate cast bronze, polished.

Sets for Pair of Doors—The above sets are for use on single doors. When sets for double doors are desired, the above sets are used in combination with other bolts, namely: 02344x02352

03344x03352
D03344xD03352

Lever, Pull and Plate

Plate, 16x3½ in.
Lever, 3 in.
Grip, 10½ in. c.toc.
Projection, 2¾ in.

GENERAL CONSTRUCTION

Fixture: All bronze: No. 02344.

Iron: Nos. 03344 and D03344.

Bolt Rods: ⅝-in. diameter.

Horizontal Bar: 1-in. tubing.

Brackets: 5½x2½ in. and 2½x2½ in. Require stiles at least 4½ in. wide.

Top Case: 5¼x2½ in.

Top Strike: With return for stop ½ in. thick.

Height of Bar: 38 in. above floor.

Reversible: No, state hand.

Master Keying: With any Corbin master keyed cylinder lock.

Keys: 3 nickel-silver keys (A), Class 27.

Price, each: No. 02344, \$56.00; No. 03344, \$34.65; No. D03344, \$30.65.

PLATE 66

EXIT PUSH LEVERS

Made for the same service as the Exit Push Bars but are less expensive.

For Use with Lock

No. 02357 $\frac{3}{4}$ —Cast Bronze, polished. For use with the same locks and latches as 02352 $\frac{1}{2}$. Constructed the same as 02352 $\frac{1}{2}$ but has a push lever which is mounted on one stile of the door only instead of the bar which extends all the way across the door.

02357 $\frac{3}{4}$

Pressure on the lever automatically retracts the latch bolt of the lock and allows the door to be opened from the inside at all times. The latch bolt may be held in the retracted position by means of the key.

No. T02357 $\frac{3}{4}$ —Same as 02357 $\frac{3}{4}$ but unpolished.

No. 00357 $\frac{3}{4}$ —Same but all iron, plated.

No. D03357 $\frac{3}{4}$ —Same but all iron, dead black finish.

GENERAL CONSTRUCTION

Fixture: All bronze: Nos. 02357 $\frac{3}{4}$ and T02357 $\frac{3}{4}$.

All iron: Nos. 00357 $\frac{3}{4}$ and D03357 $\frac{3}{4}$.

Bracket: 5 $\frac{1}{2}$ x 2 $\frac{1}{2}$ in.

Price, each: No. 02357 $\frac{3}{4}$, \$8.65; No. T02357 $\frac{3}{4}$, \$6.65

No. 00357 $\frac{3}{4}$, \$6.55; No. D03357 $\frac{3}{4}$, \$5.55

For Use with Bolts

No. 02357 $\frac{1}{4}$ —All bronze, polished. Has top and bottom bolts constructed the same as 02352 but with push lever instead of bar.

Pressure on the push lever automatically retracts the top and bottom bolts, in which position they remain as long as the door is open. When the door closes the bolts are automatically projected into the strikes except when they are locked in the retracted position by means of the key. Stock size for doors 8 ft. 6 in. high; can be fitted to shorter doors by sawing off top bolt.

No. T02357 $\frac{1}{4}$ —Same but unpolished.

No. 03357 $\frac{1}{4}$ —Same but all iron, plated.

No. D03357 $\frac{1}{4}$ —Same but all iron, dead black finish.

GENERAL CONSTRUCTION

Fixture: All bronze: Nos. 02357 $\frac{1}{4}$ and T02357 $\frac{1}{4}$. All iron: Nos. 03357 $\frac{1}{4}$ and D03357 $\frac{1}{4}$.

Bolt Rods: $\frac{1}{2}$ in. diam.

Bracket: 5 $\frac{1}{2}$ x 2 $\frac{1}{2}$ in.; requires stile at least 3 $\frac{1}{2}$ in. wide.

Top Case: 5 $\frac{1}{4}$ x 2 $\frac{1}{2}$ in.

Top Strike: With return for strike $\frac{1}{2}$ in. thick.

Price, each: No. 02357 $\frac{1}{4}$, \$29.50; No. T02357 $\frac{1}{4}$, \$22.35; No. 03357 $\frac{1}{4}$, \$18.35; No. D03357 $\frac{1}{4}$, \$15.35

02357 $\frac{1}{4}$

STOP AND STRIKE FOR EXIT BOLTS

A special form of combination door stop and bolt strike is furnished for use with automatic exit bolts. It is applied off center as shown in the plan view and acts as a stop for both doors and as a strike for the bolt or bolts when used on both doors.

GENERAL CONSTRUCTION

Stop: No. 639 $\frac{1}{2}$, cast bronze, polished.

No. 639, cast iron, dead black finish.

Size: 2 $\frac{3}{8}$ x 6 in.

Price, each: No. 639 $\frac{1}{2}$, \$2.50

No. 639, \$0.60

EXIT BOLT FOR TOP OR BOTTOM OF STANDING LEAF OF PAIR OF DOORS

No. 2358 exit bolt used at top and bottom of standing or inactive door of a pair of doors instead of exit bolts No. 02352 or 02357 $\frac{1}{4}$. Made of polished cast bronze with gun metal bolt heads and roller.

When the active door is open, pressure on the standing door, releases bolt head from strike. When both doors are closed, latch bolt cannot be retracted, movement of latch bolt being prevented by the auxiliary bolt coming in contact with the strike plate on the edge of the active door. Closing the door causes the bolt head to ride over the lip and into the socket of the strike.

GENERAL CONSTRUCTION

Fixture: Cast bronze polished.

Case: 8 x 1 $\frac{1}{2}$ in.

Offset: 1 $\frac{1}{2}$ x 3 in.

Stop Plate: 1 x 1 $\frac{1}{2}$ in.

Box Strike: 2 x 3 $\frac{1}{2}$ in.

Price, each: \$13.35

Note: State hand and thickness of door.

CYLINDER MORTISE EXIT DOOR LOCKS

Made Especially for Use with Exit Push Bars or Levers

No. 1387—For use with knob outside. Has auxiliary latch, anti-friction latch bolt and two large master cylinders. For single or pair of doors.

The exit push bar or push lever operates the latch bolt from the inside at all times. Knob outside is controlled by key in inside cylinder. When knob is locked, entrance may be had by turning key in outside cylinder which retracts the latch bolt but does not release the knob. The auxiliary latch prevents forcing of the latch bolt when door is closed but does not prevent key or push bar from operating latch bolt.

1387

No. 1386—Same as 1387 but for use with handle and thumb piece instead of knob outside. Has the same operation as 1837 but thumb piece outside may be locked instead of knob.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolt, Strike: Cast bronze, polished.
Cylinders: Bronze.
Keys: Nickel silver.
Hub: Bronze, $\frac{7}{8}$ in. for No. 1387.
Latch Construction: Anti-friction.
Reversible: No, state hand and thickness of door and whether for single or double door.
Master Keying: With any Corbin master keyed cylinder lock.

Lock No.	Front		Case size, in.	Backset, in.		Strike, lip to center, in.	Spacing, in.	Cylinders	Keys class	Master keying	Changes	Latch bolt	Price, each

†Inside cylinder has short cam.

BITTED KEY MORTISE EXIT DOOR LOCKS

Made Especially for Use with Exit Push Bars or Lever

No. 1380—For use with knob outside. Has auxiliary latch and anti-friction latch bolt. For single or pair of doors.

Latch bolt operated by exit push bar or push lever at all times from the inside and by knob from the outside. Outside knob may be locked by key from either side. Auxiliary latch automatically locks latch bolt so that it cannot be forced back when the door is closed, but does not prevent exit bar or knob from operating latch bolt.

Master Keying—In 4 sets of 160 each, or in 16 sets of 40 each, the 640 all different, with master key for each set and, when so ordered, with grand master to pass all.

No. 1383—Same as No. 1380 but with different key and fewer changes.

Master Keying—In 5 sets of 50 each, the 250 all different, with master key for each set and, when so ordered, with grand master to pass all.

No. 1382—Similar to 1380 but for use with handle and thumb piece instead of knob outside. Then the same operation as 1380 but thumb piece outside may be locked instead of knob.

Master Keying—Same as 1380.

1380

No. 1381—Similar to 1380 but for use with doorpull instead of knob or handle and thumb piece outside. Latch bolt may be locked in retracted position by key from inside only.

Can be used for entrance, only by means of door pull when latch bolt is locked in retracted position by key from inside. Operated by push bar or push lever from inside at all times. Through bolt of door pull, if used on outside, passes through round hole in steel hub. Hub has no operating functions.

Master Keying—Same as 1380.

GENERAL CONSTRUCTION

Case: Japanned iron.
Fronts, Bolt, Strike: Cast bronze, polished.
Tumblers: Wrought.
Keys: Nickel-plated steel.
Hub: Nos. 1380 and 1383 bronze, $\frac{7}{8}$ in.
Latch Bolt: Anti-friction.
Reversible: No, state hand and thickness of door and whether for single or double doors.
Master Keying: See table and text.

MORTISE EXIT DOOR LATCHES

For Use with Exit Fixtures Having Push Bar or Push Lever

No. 0176—For use without outside trim. Has auxiliary latch and easy spring latch bolt. For single or pair of doors.

Latch bolt operated by exit push bar or push lever from the inside at all times. Auxiliary latch automatically locks latch bolt, so that it cannot be forced back when the door is closed, but does not prevent exit bar from operating latch bolt.

No. 176—Similar to 0176 but does not

0176

have auxiliary latch and can be operated by knob from outside.

Used where access is desired from the outside by knob and a lock is not necessary, yet it can be operated from the inside by push bar or push lever.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolt, Strike: Cast bronze, polished.
Hub: No. 176, bronze $\frac{7}{8}$ in.
Latch Bolt: Easy spring.
Reversible: Yes.

Prefix Letters for Finish. Description of Finishes, Plate 3

PLATE 68

CORBIN CAST AND WROUGHT BRONZE BUTT HINGES

Corbin Bronze Loose Pin Butt Hinges

Made of both cast and wrought bronze in standard or templet styles. The grade of bronze used has proven by tests to give the greatest wear possible for the class of work that butts are called on to perform.

Friction wear is reduced by the use of lubricating washers, steel bushings or ball bearings.

These are assembled in the butt in such a manner that they will not fall out when the leaves are separated.

Lubricating Washers—Made of hardened steel, these washers minimize excessive wear and strain at the joints.

They are used on the lighter grade of cast bronze butts where the work imposed is not heavy.

Lubricating Washer

Full Size Section of Ball Bearing

Steel Bushings—Similar to the steel washers except that they extend the full length of the pin and are used on wrought bronze butts.

Ball Bearings—The ball bearings and runways are snugly enclosed to prevent dust and moisture from working in. They are used when silent operation of heavy doors is required as in hospitals, etc., and where exceptional frequency of operation may be expected.

Furnished on the heavier types of both cast and wrought bronze butts.

Button Tips—Corbin butts are regularly furnished with ball tips, but when so ordered can be furnished with button tips as illustrated.

Button Tip

Cast Bronze with Non-rising Steel Pins

No. 61—Cast bronze, polished, with hardened steel lubricating washers.

No. 61½—Same as No. 61 but heavier.

No. 061½—Heavy cast bronze, polished, with ball bearing.

No. 061¾—Same as No. 061½ but extra heavy.

No. 71½—Templet type for metal doors. Heavy cast bronze, polished, with hardened steel lubricating washers.

No. 071½—Same as No. 71½ but with ball bearing instead of washer.

No. 071¾—Same as No. 071½ but extra heavy.

CORBIN CAST IRON BUTT HINGES

The long wearing qualities of cast iron butts have been known for some time. However, an exhaustive and authoritative test was recently made by the U. S. Bureau of Standards to determine the relative wearing quality of cast iron butts and butts of other materials. The accompanying diagram is a reproduction of the graph made by the bureau from these tests. A pamphlet on the comparative values of cast iron butts and those of other materials will be sent on request.

On account of the nature of its composition, cast iron is a metal which is practically wearproof, and for that reason becomes ideal for butts. After the wearing surfaces have been in contact with each other for a short time they become glazed and highly polished,

and consequently are only slightly affected by constant usage. The graphite in the iron furnishes all the lubricant necessary.

For ordinary usage, Corbin Cast Iron Butts are practically everlasting. They are made of a special grade of iron which chemical analysis and repeated tests have proven to have a superior wearing quality. This iron is also to some extent ductile and is comparatively free from brittleness.

Fine finishes are possible due to the close grain of the metal which takes a high polish. These butts can be plated in bronze and brass in any of the regular Corbin finishes, or in colors to match any other metal fixtures used.

160, 161½ and 161¾

Loose Pin Standard Butt Hinges

These butts are non-rising steel pin type not made to template. Furnished with brass pins when so ordered.

No. 160—Heavy cast iron in plated finishes. Also furnished plain, which costs slightly less.

No. 161½—Heavy cast iron, polished and plated.

No. 161¾—Extra heavy cast iron, polished and plated.

PLATE 70

DOOR CHECKS AND SPRINGS

Door Check and Spring

It is very generally recognized that the Corbin door check meets all the conditions of difficult and exacting requirements. It is this recognition which has led to the adoption of the Corbin door check for the entrances of the largest terminal stations of the country where throngs pass in and out and strong draughts are encountered; in public and office buildings where the cost of up-keep and trouble of frequent attention are carefully considered, and in many other places where the requirements are severe.

It is mechanically correct, well made, generous in its design, and contains features of unusual merit which have warranted the favor it has received.

It is right or left hand without change; can be used upon any door and can be easily applied by following the simple instructions packed in each box. It is not affected by extremes of temperature, and by a turn of a screw can be adjusted to any draught. Special adaptations fit it to unusual installations, and it responds satisfactorily to all demands. The

sizes recommended have a large margin of capacity for the work assigned.

There are but four moving parts.

Spring—Is light, long and resilient. The tension is evenly distributed over twenty coils of flat wire which are so made that they do not touch each other, eliminating internal friction and permitting the full power of the spring to be exerted in performing its function.

Rack and Pinion—Keep the door under checking control from the moment the motion of closing begins until the door touches the stop noiselessly and is held in close contact with it.

Valve—Is liberally designed, permitting the passage of a goodly amount of liquid and giving a correspondingly large range of adjustment and a freedom from clogging. The bypass is so formed that the movement of the door is rapid at the beginning, gradually becoming slower until the door touches the stop.

Liquid—Is a special Corbin compound of the proper viscosity and not affected by extremes of temperature. Under tests, it functions perfectly at 59° F. below zero.

Door Check and Spring

Three-point Holder Door Check

Holds door open at 20, 55 or 90 deg. Cast iron, Columbian bronzed.

No. 723 for inside doors to 7x3½ ft.

Price, each: \$17.35.

No. 724 for inside doors to 7½x4 ft.

Price, each: \$21.00

Door Check and Spring with Fusible Link

Equipped with hold-back attachment and fusible link for fire doors. Link melts in case of fire, releasing the hold-back and causing check to close doors. Cast iron, Columbian bronzed.

No. 523 for inside doors to 7x3½ ft. Price, each: \$28.35

No. 524 for inside doors to 7½x4 ft. Price, each: \$31.00

Approved by the National Board of Fire Underwriters

SIZE AND CLASSIFICATION OF DOOR CHECKS

Size	Classification
1	For light doors such as screen doors, coupon booth doors, etc.
2	For heavy pantry doors, outside or kitchen doors, heavy coupon booth doors, inside or office doors not over 7x3 ft.
3	For vestibule doors, heavy inside doors, outside doors not over 7x2½ ft.
4	For large interior doors, store doors, outside doors not over 7½x3 ft.
5	For doors not larger than 7½x4 ft.
6	For extra large doors or doors subject to heavy drafts, such as are used in public buildings, stores, hotels, railroad depots, etc.

STYLE AND FINISHES

Size	Catalogue number—Cast iron					
	Regular style		With automatic hold-back attachment		Coupon booth style	
	Unpolished Columbian bronzed	Polished and plated	Unpolished Columbian bronzed	Polished and plated	Bronzed	Plated

Double-action Door Check No. 303

Reversible. Furnished with interlocking pivot to keep doors in alignment. Cast iron, Columbian bronzed.

Price, each: \$17.50.

No. 01

No. 010

Screen Door Checks

Right or left hand without change. Cast iron, Columbian bronzed.

No. 01 requires only 3-in. space between doors and can be applied to top rail as narrow as 3½ in.

No. 010 is applied to outside for use where space between doors will not permit use of No. 01.

Price, each: \$5.00.

CONCEALED CASEMENT OPERATOR

For Windows Opening Out

Made of galvanized wrought steel and cast iron with crank handle and rose of cast bronze, polished.

Turning the crank handle will open or close the sash without interference with curtains or window screens. The sash is securely locked at any point from closed to wide open.

The concealed casement operator can be applied to either right or left hand sash. A simple reversal of parts will change the hand.

The only visible parts are the crank handle and rose. The crank handle can be made detachable if desired.

Price: \$11.35.

PLATE 80

TRANSOM LIFTERS

Corbin Transom Lifters are made for top, bottom and center hung transoms opening in or out. They are the sliding rod type and are securely held in a true line by plates and guides. Transoms are thus opened and closed smoothly and noiselessly.

The arrangement is simple and small enough to be placed on narrow trims, yet powerful enough to easily control heavy transoms.

The transom lifter grips are furnished in two types: Button and Pincher. The

Button
Grip

Pincher
Grip

button grip consists of a tension spring which holds the clamp against the rod when the button is released. To move the rod up or down the button is pressed which releases the clamp. The pincher grip has two lips in each of which is a hole through which the rod runs. When released, the two holes are staggered and the rod is held by friction. When the lips are pinched toward each other the holes are brought into line and the rod slides freely. A small spring keeps the lips apart when released.

CONCEALED TRANSOM OPERATORS

These Lifters will operate a transom of any size or height, are applied in casing at hinge side of door and can be applied to either wood or metal trim and in partitions as thin as 2 in. All parts except T-handle and Rose are entirely concealed when operator is applied.

The sash is operated by merely turning the T-handle;

$3\frac{3}{4}$ revolutions of handle opens the transom to 45 degrees. The sash is securely locked at any point from closed to wide open.

The standard rod applied to a 24-in. transom over a 7-ft. door and a 3-in. transom bar, will bring the operating box or T-handle 4 ft. from the floor.

For top-hung transoms,
opening in

Details—All working parts are attached to a steel back plate, allowing the device to be attached as a unit.

The T-handle and Rose can be adjusted to varying backsets, from $1\frac{1}{2}$ to $2\frac{3}{8}$ in. from unit plate to center of T-handle. When space is less than $2\frac{3}{8}$ in. low gear box is used and backset from unit plate to T-handle is $1\frac{1}{8}$ in.

The standard rod applied to a 24-in. transom over a 7-ft. door and 3-in. transom bar, brings the operating box or T-handle 4 ft. from the floor. Any length rod will be furnished to order.

Full instructions for installing are packed with sash lifters.

Material and Finish—Operator is made of wrought steel with galvanized finish. T-handle and Rose are of cast bronze with polished finish as standard but can be furnished in any finish.

Ordering Information—Size and thickness of transom, height of door, hand of operator, full size section of transom bar, jamb and trim. Butts must be ordered separately.

Hardware

Hardware is made in a great variety of designs and of different materials to suit all pocketbooks.

Solid brass or bronze hardware is indisputably the best.

All good door knobs, latches, knockers, mail boxes, lighting fixtures, railings, door closers, hooks,

The scientific knowledge and practical experience of our Research and Building Service Departments are at your disposal. We will be glad to consult with you on all problems pertaining to the uses and applications of Copper, Brass and Bronze.

catches, plates—in fact, all good pieces of outdoor hardware—are made of solid brass or bronze.

Leading manufacturers publish illustrated catalogues giving complete lists of their products. This Association will be glad to furnish names of manufacturers who make solid brass or bronze hardware.

Solid Bronze Door Check

Brass Knob and Escutcheon of Special Design for a Fine Building

Brass Door Knocker in Use More Than 50 Years

The Unsightliness of Corroded Hardware

The illustration below shows the marring effect of corrosion which has not only spoiled the appearance of the plated hardware used but has also streaked and stained the surrounding woodwork. It is a good example of the unsightly results of trying to save a few dollars on the cost of outdoor hardware.

Plated hardware, at best, is but temporarily attractive. Because of the severe service to which door knobs,

knockers, latches, door checks, catches and all such pieces are constantly subjected, the plating soon wears off, the corrodible base becomes exposed and the whole piece starts to go, becoming unsightly itself and staining all the surrounding woodwork. This is especially distasteful from the architect's point of view when it is realized that every house he builds must stand as an example of his work.

THE W. IRVING FORGE, INC.

Hand Forged Wrought Iron Hardware

TELEPHONE
CALEDONIA 2485, 2940

326-328 East 38th Street, NEW YORK, N. Y.

Products

COLONIAL, ENGLISH, SPANISH and ITALIAN HARDWARE of HAND FORGED WROUGHT IRON, BRASS and MONEL METAL; DOOR and SHUTTER HARDWARE, reproduced from authentic hand forged specimens in the W. Irving Collection.

Also manufacturers of Lighting Fixtures, Fireplace Fittings, etc.

Description

Two things must be present in a true piece of hand forged wrought iron hardware; design and craftsmanship. Only when wrought iron designs are faithfully reproduced by the same methods the smiths of olden time used in creating them, can the product be honestly called *hand forged wrought iron hardware*. When the design is copied the result is merely imitative and not real.

Door Hardware

Knobs, lever handles, pull handles, etc., are also reproduced in a combination of brass and iron or all brass.

Finishes

Dead Black—As the name implies, this finish gives a dull, flat black appearance to the iron.

Half Polish Iron—This finish brings out the hammer marks in relief as shown in the majority of the reproductions on this page.

Brass—All standard finishes regularly applied to brass and bronze.

Rustproofing—All hardware exposed to the weather is subjected to a special process of cadmium plating before finishing which resists rust.

Preserving the True Hand Forged Character

Here at THE W. IRVING FORGE, INC., something is done which we do not believe is being done elsewhere today.

Hand forged wrought iron hardware is made just as it was made a century and a half ago by unhurried smiths in the Irving way, and the result justifies all the extra trouble it may take.

The holly leaf trade-mark is the pledge of the painstaking execution—"free from the hallmark of rolling mill."

Service

We can develop any ideas submitted by architects, decorators or builders. We also work from architects' drawings and specifications.

Foreword

The Company and Its Reliability

THE RUSSELL & ERWIN MFG. CO. has been making RUSSWIN Distinctive Hardware since 1839. During this time it has supplied hardware for buildings of every type and description, from inexpensive residences to the most ornate and monumental buildings.

A Complete Hardware Line

In offering our hardware to the Architectural profession, we can assure a varied and complete selection of hardware of RUSSWIN manufacture. The line includes locks of every description, trim, butts, fire door hardware, garage hardware and all other finished hardware necessary for a complete installation.

Special Hardware Service for the Profession

The experience gained in designing and supplying hardware to best fulfill various requirements enables us to offer a complete service for all types of buildings.

This experience also enables us to be of assistance to the architect in offering suggestions as to the selection of hardware which will best answer the requirements of the building under consideration. This applies especially to the proper locking arrangements for specific services. Suggestion for trim, which will be consistent with the character of the building in regard to cost, design and use, will also be given when requested.

A highly specialized department is maintained at the general offices, as well as in the New York and Chicago offices, for the purpose of assisting architects by scheduling their requirements in builders' hardware.

Requests for this type of service should be accompanied by preliminary drawings and the approximate cost of the building. With this information at hand, complete layouts will be furnished, including a schedule of the trim hardware required, properly specified, based on the individual contract.

DISTINCTIVE
BUILDERS' HARDWARE

*A Hardware Catalogue from the
Architect's Angle*

This catalogue was prepared by a committee of architects collaborating with the hardware specialists of this company. It has been their endeavor to present the subject in a clear, concise manner, not from the viewpoint of the manufacturer but from that of the user of hardware. The information has been tabulated and condensed so that comparisons may be easily made between similar types. The locks have been classified in regard to their uses and a number of lists of locks for various types of buildings have been included.

For Description of Finishes, see Page 3

RUSSWIN**RUSSWIN STANDARD FINISHES****REFERENCES**

Skilled and experienced workmen are employed in the production of our finishes, and the greatest possible care is always exercised to obtain the best results and the same harmony of coloring throughout. It should be understood, however, that the same results cannot be obtained on plain and ornamental hardware, nor on a design having a matted surface as on one having a large area of polished surface. This is especially true of the oxidized, statuary and verde antique finishes. Designs having very little ornament will differ slightly in coloring and shading from those having

a great deal of ornamental surface. Owing to the special process employed in developing finishes 10W, 11W, 16½ and 36, slight variations will occur in two pieces of the same pattern, thus conveying to each piece an individuality of its own.

All finishes except 4, 10W, 11W, 11Z, 24, 34, 44, 45B, 45H, 45R, 46, 47 and japanned have a coating of transparent lacquer which is applied to preserve the finish. If finishes 10, 11, 11C and 11D are wanted without lacquer suffix "NL" to these numbers.

RUSSWIN STANDARD FINISHES

Arranged in Numerical Order According to RUSSELL & ERWIN MANUFACTURING Co.'s Symbol Numbers with Comparative Symbols Established by the U. S. Bureau of Standards, Descriptions and References

R. & E. Symbols	U. S. Symbols	Surface	Description Color or Shade	Reference	Description of Reference Letters	
					Letters	Description
2	US20	Dull	Statuary Bronze	A	A	We advise and urge the use of this finish on bronze metal only.
2D	US20A	Dull	Statuary Bronze, Dark	A		
02	US21	Sanded	Statuary Bronze, Medium	A	B	We advise and urge the use of this finish on brass metal only.
4	US14	Buffed	Nickelplated	B	C	Can be used on brass, iron or steel.
7½	US 8	Buffed	Antique Copper	C	D	Limited to use on cast brass metal only.
8C	US23	Dull	Silver Plated, Oxidized, Relieved	D	E	Limited to ornamental design goods, for plain goods use Finish 9.
9	US 4	Dull	Natural	C	F	Limited to ornamental design goods, for plain goods use Finish 09C.
9C	US 5	Dull	Brass, Oxidized, Relieved	C-E	G	Limited to ornamental designs or goods with rough surfaces.
9E	Special	Dull	Antique Brass (Old English)	D	H	These finishes are treated with a heavy black oil, which causes a gradual oxidization varying with age, temperature and exposure, the shade or color thus produced depending on one or the other, or all three of these conditions. It is therefore characteristic of these finishes not to be uniform in either shade or color.
09B	US 7	Sanded	Brass, Oxidized, Relieved, High Lights Polished	C-F	I	Limited to ornamental design goods, for plain goods use Finish 11D.
09C	US 6	Sanded	Brass, Oxidized, Relieved	C	J	This finish is treated with wax, which causes a gradual oxidization varying with age, temperature and exposure, the shade or color thus produced depending on one or the other or all three of these conditions.
10	US 3	Buffed	Natural	B	K	Limited to ornamental design goods, for plain goods use Finish 14.
10W	Special	Natural	Brass, Relieved, Oil Rubbed	B-G-H	L	Limited to plain brass goods with flat surfaces.
11	US 9	Buffed	Natural	A	M	Limited to brass or bronze metal.
11C	US11	Dull	Bronze, Oxidized, Relieved	A-I	N	Limited to articles regularly catalogued in cast brass or bronze, with the exception of wrought butts (No. 80 Line). Furnished on <i>Special order</i> and then only in quantities. This finish is produced by the base metal, which is of a uniform shade or color throughout, and when buffed or polished is very similar to RUSSWIN Finish 4. As the finish does not change with wear, it is greatly superior to Finish 4 (nickelplate) and is therefore especially suited for hardware used in lavatories, bathrooms, swimming pools, etc.
11D	US10	Dull	Natural	A		
11W	Special	Natural	Bronze, Oxidized, Relieved, Oil Rubbed	A-G-H	O	Limited to cast iron or steel. This is a Black Finish commonly known as Rustproof. It is not a finish that will stand exposure to the weather in damp climates, and for that reason is recommended particularly for inside work. Under ordinary conditions in dry climates, either for inside or outside use, it is substantially rustproof.
11Z	Special	Dull	Statuary Bronze, Light, Waxed	A-J	P	Limited to iron or steel.
011C	US12	Sanded	Bronze, Oxidized, Relieved	A	Q	Goods furnished in these finishes are indicated by the number of the article and need no symbol.
13	Special	Dull	Statuary Bronze, Light	A	R	Limited to cast RUSSWIN metal.
14	US15	Dull	Nickelplated	C		
14C	Special	Dull	Nickelplated, Oxidized, Relieved	C-K		
16½	Special	Dull	Imitation Half Polished, Iron	C		
19	US24	Dull	Gold Plated	D		
22	Special	Fine wheel	Brass, Natural (Ship Finish)	L		
24	US26	Buffed	Chromium Plate	A		
34	US260	Dull	Chromium Plate	A

SINCE 1839

For Unit Locks, see Pages 40 to 43, inclusive

MODERN SCHOOL**Cast Brass or Bronze**

The following designs were developed especially for use in commercial and public buildings and offer a complete line from which to select high grade trim for such buildings.

They are listed under this heading on account of answering the special requirements demanded for buildings of this character.

The hardware is of the highest grade cast bronze and the designs are simple and dignified. They have a character which recommends them for commercial and public buildings of all classes where a high grade product is desired. They are made extra heavy to withstand the years of constant hard use to which such hardware is subjected.

TYPES OF SHANKS FOR ATTACHMENT OF KNOBS TO SPINDLES

Plain Shank

Simplex Shank 2000 Series

Screwless Shank 3000 Series
(Patented)

Plain Shank Knobs—Fastened to a plain spindle by side knob screws in the side of the shank, by which with the aid of knob washers the proper adjustment is obtained.

The shank fits into the cup or thimble of the rose or escutcheon, which permits a little loose play.

Simplex Shank Knobs—Designed to overcome the looseness described above, which is common of all plain shank knobs, and to give a closer adjustment without the use of washers. These knobs are fastened to a threaded spindle by the means of side knob screws at each end. When the knobs are screwed up to the proper position, the screws are set in the groove of the spindle. This type of mounting permits a close fit with entire freedom of action, the shank resting

on a turned thimble rather than fitting loosely in it as on the plain shank type.

Screwless Shank Knobs—Have all the advantages of the simplex type, with the following additional features which make them the ideal knobs to use.

The outside knob is fastened to the spindle by the means of a pin which is held in place and concealed by the thimble when in use; the inside knob has an adjustable shank which is set up on the spindle by the means of wrench, thus affording the most accurate and closest possible adjustment.

These knobs also rest on a turned thimble, and are so made that there is no lost play or possibility of the knobs working loose or coming apart from the spindle.

For Description of Finishes, see Page 3

RUSSWIN

LOCK SECTION

GENERAL INDEX FOR CYLINDER MORTISE LOCKS

For Cylinder Mortise Locks Grouped According to Backset, see Page 35

FOR USE ON HINGED DOORS

These locks have japanned iron cases, cast bronze fronts and bolts, cast and wrought bronze strikes, brass hubs, and include cylinders with Number 852 key-way, which permits the same to be either master keyed in sets or keyed alike with locks in this chart, as well as any other RUSSWIN Cylinder Lock with the same kind of cylinder. Numbers with either "M" or "EM" suffixed indicate master or emergency master keyed feature.

Locks with beveled fronts have the standard bevel of $\frac{1}{8}$ in. on 2 in. and are not reversible. Locks with flat fronts are reversible, except where indicated by an "*" and when thus indicated the hand must be speci-

fied. This is also necessary in ordering rabbeted and beveled front locks. For hands of doors see page 38.

Flat front locks can be furnished with beveled fronts $\frac{1}{8}$ in. on 2 in. Any other bevel is special on all locks.

Special backsets as indicated below can be furnished. Most locks are 1 in. wider than the backset. There are exceptions, however, and this should be carefully checked with the text covering each particular lock.

Locks requiring turn knobs are packed with No. 066 $\frac{1}{2}$ when sold separately.

RUSSWIN

STANDARDIZED TEMPLATE CYLINDER LOCKS FOR HOLLOW METAL DOORS

We are now prepared to furnish Cylinder Locks in accordance with Commercial Standard No. 9 issued by the U. S. Department of Commerce. Certain maximum face dimensions have been set up on Cylinder Locks that will come under this standardized program.

Locks within this classification have a standard front 8x1¼ in., a maximum thickness of front of ¾ in., and take machine screws ½ in.—No 12/24. The strike has a standard dimension of 5¾x1¼ in. and the lip of the strike has a standard height of 3½ in. The strike is flat without any box; the box being provided by the door manufacturers who have adopted this program. The spacing between the cylinder hole and knob hole will vary in the different types of Cylinder Locks and no standard has been adopted for this difference in dimension.

These are not the only Cylinder Locks that we will furnish for template work, as special occasions will arise when it will be necessary to furnish other locks to template. The adoption of these standards is for the purpose of assisting the Metal Door Manufacturers in carrying a greater quantity of stock doors and, also, in eliminating the necessary detail that goes with the application of hardware.

When this type of standardized hardware is required, the following clause should be included in the hardware specifications:

"All mortised hardware for use with hollow metal doors and trim shall be made complete in accordance with the Commercial Standard No. 9 issued by the U. S. Department of Commerce, except where hardware thus constructed is not yet commercially available. Where minor changes in design of specifications will permit the use of such hardware, the manufacturer shall take the matter up with the architect before proceeding with the work."

The Hollow Metal Door Association have provided each member with certified template drawings of these locks. We will keep the association informed of any changes that we make, that they in turn may notify their members and issue new drawings if necessary. Under these conditions it will

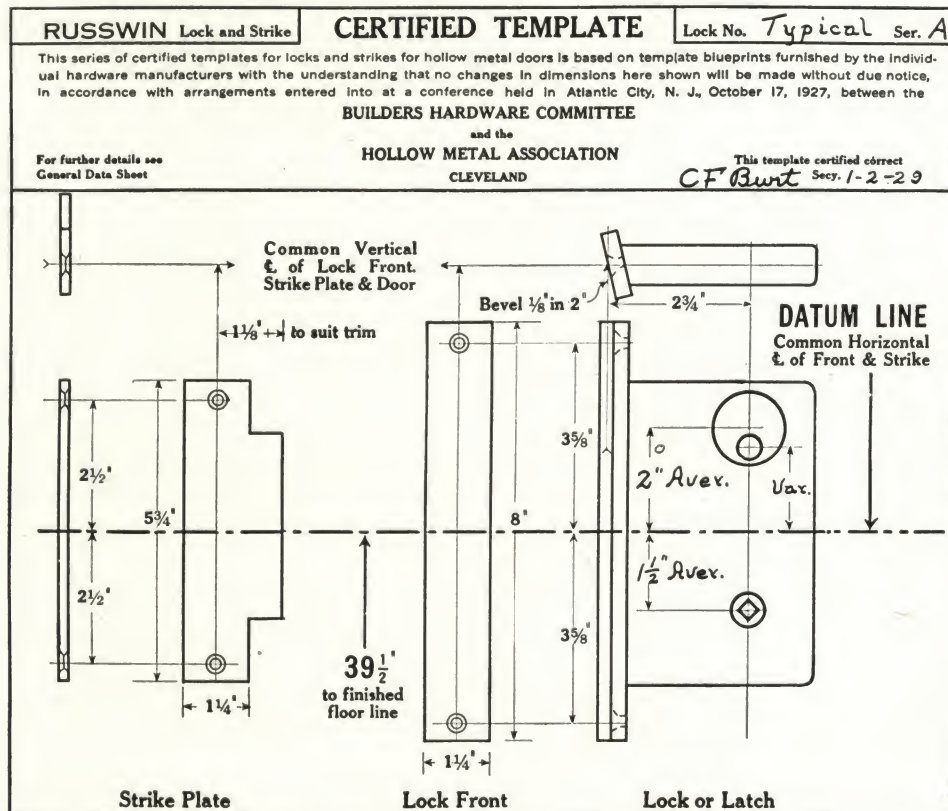

be unnecessary to provide these manufacturers of hollow metal doors with template drawings for each and every job. This will save unlimited time in the transmitting of information.

We have out at the present time a number of templates under the old program. To secure Cylinder Locks under the new program, it will be necessary to specify "Government Standard Template."

GENERAL INDEX FOR MORTISE BITTED KEY LOCKS

R&E
SINCE 1839

For Mortise Bitted Key Locks Grouped According to Backset, see Page 35

LOCKS, LATCHES AND DEAD LOCKS ARRANGED NUMERICALLY

These locks have japanned iron cases, cast bronze fronts and bolts, cast and wrought bronze strikes, but can be furnished with brass fronts and cast and wrought brass strikes. They are furnished with solid steel nickelplated keys, and locks operated by keys of the same class can be master keyed together. Locks with either "M" or "EM" suffixed indicate master or emergency key feature.

Locks with beveled front have the standard bevel of $\frac{1}{8}$ in. on 2 in., and are not reversible. Locks with flat fronts are reversible, except where indicated by an "*" and when thus indicated, the hand must be

specified. This is also necessary when ordering rabbeted and beveled front locks.

For hand of doors, see Page 38.

Flat front locks, grade of No. 380 $\frac{3}{4}$ and better can be furnished with beveled fronts $\frac{1}{8}$ in. on 2 in. Any other bevel is special on all locks.

Special backsets as indicated in this chart can be furnished. Most locks are 1 in. wider than the backset. There are exceptions, however, and this should be carefully checked with the text covering each particular lock.

Lock No.	Illustrated on Page	Name or type of lock and purpose for which best suited	Front		Case			Backset, in.		Spacing, in.	Strikes		Turn-bblers	Changes	Latch hub		Key	Bolt hub, in.	Latch construction

RUSSWIN

THE DETERMINING FACTORS IN QUALITY OF RUSSWIN LOCKS

R&E
SINCE 1829

The lock constructions herewith shown cover practically the entire RUSSWIN line, and are for purpose of comparison only.

The three essential qualities of a lock are:

1st. That its bolt should be guarded against operation by keys other than those to which it has been fitted.

Security is obtained by—

(a) The number of tumblers.

(b) Different sections of keyway.

(c) Wheel wards which are small lugs on the inside of the lock, in the path of the key, obstructing any key except the one to which it has been fitted.

Note: Security is impaired directly as any one of the above is eliminated.

2nd. That the latch should be controlled by an independent spring, of a resilience and ease of action, that the door may be closed easily against its resistance, when it comes in contact with the strike.

3rd. That the knob or lever handle mechanism should be controlled by springs of sufficient power to insure the return of same to their normal position.

Springs:

The types of springs used in a lock are arranged in a sequence of quality as follows:

French springs	} For use with lever handles only.
Gun springs	
Compression springs	} Used with knobs.
Tension springs	
Coil springs	
Lever springs	

BITTED KEY LOCKS

Lock 384 has double compression springs.

Lock 0370 has the extension easy spring.

Lock 0389 has compression and lever springs.

Lock 734 has semi-easy spring.

RUSSWIN

DEFINITIONS AND TERMS APPLIED TO RUSSWIN LOCKS

R&E
SINCE 1839

Anti-friction Latch—A small additional latch connected with the regular latch bolt in high grade cylinder locks, which engages the strike and retracts the regular latch.

It prevents friction between latch and strike, strain on the lock, and permits the door to close more easily.

Recommended for doors on which door closers are used.

Auxiliary or (Guard) Latch—A supplemental latch used for dead-locking locks which do not have dead bolts.

An auxiliary latch does not engage in, but rides on the surface of the strike. This holds the auxiliary latch

TYPES OF LATCHES

Anti-friction Latch →

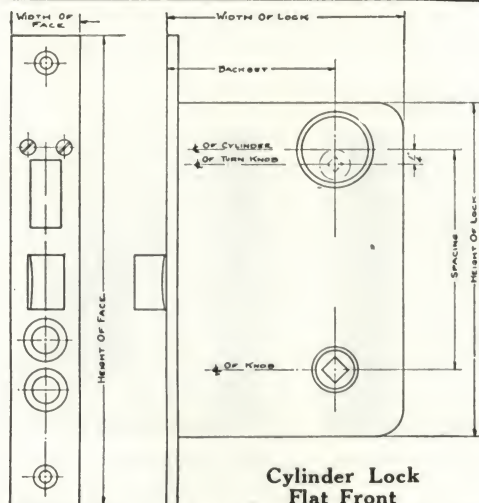

Auxiliary or Guard Latch →

depressed, and when the outside knob has been set, the regular latch bolt cannot be retracted by any means other than the key from outside and knob inside. It also prevents any manipulation of stops in face of lock when door is closed.

RUSSWIN Auxiliary Latches are of the improved swinging type, permitting the easy closing of door.

Swinging or Hinged Latch—In this type of construction the latch is hinged at the inner face of the lock front and swings into the lock case on contact with the strike. Affords the easiest action with the least friction.

**Cylinder Lock
Flat Front**

BACKSET SPACING AND FRONTS OF LOCKS

**Rabbeted Front
Locks**

**Bitted Key Lock
Flat Front**

Spacing—This is the vertical distance between the center of the knob hub and the center of the cylinder, keypost or turnpiece hub.

Backset—This is the horizontal distance from the face of a lock to the center line of its keyhole or hub.

Method of measuring backset of locks is as follows—

Flat Front Locks—Outside face of the front to the center of the keyhole or hub.

Beveled Front Locks—Center of the outside face of the front to the center of the keyhole or hub.

Rabbeted Front Locks—In this catalogue the short side measurement is given (see cut). When ordering special backsets, the number of the lock and the backset wanted should be specified. When backset is mentioned it will be interpreted as meaning the distance on the short side and that the regular depth of rabbet furnished with the lock specified is required. Locks having depth of rabbet other than regularly listed will be furnished to order. When ordering special depths of rabbet send full-size

detail of door stiles at the point where the lock and strike meet.

Rabbeted front locks are not reversible and hand of door should be specified.

Beveled Front Locks—The regular bevel is $\frac{1}{8}$ inch on 2 inches. All other bevels are special. Locks 380%, and all higher grade, will be furnished with fronts beveled $\frac{1}{8}$ in. on 2 in. Beveled front locks are not reversible and orders should specify the hand of lock wanted. See Page 38 for bevel and hand of doors. Reversible locks are beveled only to order.

Recessed Front Lock—One having an especially constructed front and strike which, when interlocked, guards or protects the latch bolt against attack through the crevice of the door. Especially adapted for use upon doors of insane asylums, and other doors opening outward (see cut).

Rounded Front Locks—Cylinder mortise dead locks can be furnished with rounded fronts of standard radius to conform to the edge of double-acting doors. Standard radius, $2\frac{1}{4}$ inches.

**Recessed
Front**

HUBS AND LATCH BOLT

Hubs—Brass Compensating—Our compensating hub is of the brass ball construction, which will allow compensation in any direction. The use of this type of compensating hub is a simple and effective means of relieving any cramping or binding of the knobs when the lock case is not applied in a line exactly parallel with the face of the door stile. It also permits the use of a flat front lock to a door having its edge slightly beveled (see cut).

French Spring—(see Page 36 for illustration)—This is a heavy type of spring which is usually applied to the hub of a lock, intended to offset the overbalancing effect of the lever handle, thereby relieving the strain which would otherwise be thrown on the sensitive spring of the latch bolt. Locks equipped with this type of spring are indicated by prefix "F."

TYPES OF SPRINGS

Gun Spring—(see Page 36 for illustration). A heavy flat spring of special construction specially adapted for use with lever handles. It is designed to give the full resiliency of the spring and will not break from crystallization. Locks equipped with this type of spring are indicated by prefix "G."

Latch Bolt—Easy Spring—Used in all good locks. The term *easy spring* when applied to a lock designates that the latch is operated by a separate spring from the knob. Formerly the knob and latch were actuated by one spring. This necessitated a heavy spring and made the closing of the door hard as the latch was stiff. With the introduction of two springs a lighter spring could be used on the latch and the latch operated easily, thus the term *easy spring*.

For Description of Finishes, see Page 3

RUSWIN**DEFINITIONS AND TERMS CONTINUED****R&E**
SINCE 1839**INDICATOR**

To indicate if room is occupied.

**Type B**

is occupied. For use with locks operated by key as Nos. 608 $\frac{1}{4}$ EM, 609 $\frac{1}{4}$ EM, 610 $\frac{1}{4}$ EM, 1230EM, 1232EM, 1234 $\frac{1}{2}$ EM, 1241 $\frac{1}{4}$ EM and 1246 $\frac{1}{4}$ EM.

Type B (Patented)—When locks are supplied with this indicating device, the outside escutcheon has a "push button" attachment.

When the door is locked from the inside by the key, the "push button" cannot be depressed, thus indicating that the room

**067 (Patented)****COMPENSATING TURN PIECE**

This turn piece is furnished with cylinder locks only when ordered with a combined rose and escutcheon requiring a turn piece.

The advantages are that it allows perfect alignment in application, thus insuring free action and reducing friction to a minimum.

A: Collar on escutcheon having a vertical adjustment of $\frac{1}{8}$ in.

B: Escutcheon.

C: Tension spring.

D: Washer.

E: Pin which fastens spindle F to the turn and allows both vertical and horizontal play of the spindle eliminating any tendency to bind.

THE HAND AND BEVEL OF DOORS**Left Hand****Right Hand****Left Hand Reverse Bevel****Right Hand Reverse Bevel****HAND OF DOOR**

The hand of a door is determined from the outside, except French doors on which the hand is taken from inside, when cremone bolts or casement fasteners are used.

The outside of an entrance door is the street side.

The outside of a room door is the hall side.

The outside of a closet is the room side.

The outside of a communicating door is the side from which when the door is closed, the butts can not be seen.

The outside of twin doors is the side between the two doors.

The inside of a French door is the side on which the cremone bolt is applied.

Standing outside the door if the butts are on the right it is a right hand door; if on the left it is a left hand door.

If, when standing outside, the door opens

from you, or inward, it takes a lock with regular bevel latch bolt; if it opens toward you, or outward, it takes a lock with reverse bevel latch bolt (see illustration above).

Locks described as "reversible" can be used on doors of either hand, except when the door is beveled. In this case the hand and bevel of door must be given.

BEVEL OF DOOR

A door is beveled when its edge is not at right angle with the surface.

Mortise locks for such doors require fronts beveled to correspond to the door.

Bevel is determined by placing square on the door.

State thickness of door and the distance that one edge is back of the other.

The standard bevel is $\frac{1}{8}$ in. on 2 in.

RUSWIN ADJUSTABLE CYLINDERS**Patented**

The RUSWIN adjustable cylinder No. 8 allows the use of a single cylinder which can be adapted to doors from 1 $\frac{3}{4}$ to 4 in. thick. The adjustment is made by an adjusting screw

at the back of the cylinder. This adjustable cylinder does away with the necessity of ordering special cylinders to fit each thickness of door on the job.

**Cylinder Not Extended****Cylinder Extended**

For Description of Finishes, see Page 3

RUSSWIN

DESCRIPTIONS OF MASTER KEYS AND THEIR OPERATIONS

R&E
SINCE 1839

Applying to both RUSSWIN cylinder and bitted key locks, but only to such locks as are described as adapted to the various key systems

Guest or Change Key—Operates only the lock to which it is fitted.

Closet door locks in rooms can be constructed, when desired, so that they are controlled by the guests, or change key only. In this case they are subject to a closet door master key when cylinder locks are used and the grand master or emergency key when bitted key locks are used.

Maids' Master Key—Operates one group of locks.

Grand Master Key—Operates a number of groups of locks, each group being under control of a maids' master key.

Master Guard Key—Used only with bitted key locks. Operates any locks subject to the maids' master, grand master or display keys. It is so constructed that when used on locks ordered subject to a guard key, it makes inoperative the maids' master, grand master and display keys, but does not act against an emergency key.

Emergency Key—Operates any lock in the system which has been locked by the guests', maids' master, grand master, master guard or display keys. It controls the functions of the lock the same as the master guard key and in addition

will operate when bolt is thrown from the inside even though the guests' key remains in the lock. This key can also be used to make inoperative all keys except the master guard key. It can also be used as a master guard or shut out key.

The Display or Individual Guard Key—This is a guests' key so constructed that it makes inoperative the maids' master and grand master keys. Only the emergency key will then operate. It is designed for rooms requiring special protection and assures the holder absolute security against any key except the emergency key.

Note: Attention is called to the fact that the guests' key or the turn piece will always operate to unlock the door from the inside even when it has been locked from the outside by any one of the various types of master keys.

When ordering master keyed locks the name of the building on which they are to be used should be given so that a proper record of the key system furnished may be kept on file.

Orders should specify the quantity of master keys, of the various types, required.

Duplicate master keys are furnished to sample, and then only upon receipt of proper requisition from the owner or authorized agent.

Russwin Cylinder locks are master keyed and grand master keyed without the use of a supplemental cylinder. Both regular and master keyed cylinders are interchangeable in the same lock.

MAISON SYSTEM

The Maison and Maison Master systems are applicable only to Russwin Cylinder locks.

Under the Maison system one or more locks are subject to all the keys of other locks in the building. As used in apartment house work the locks to the various apartments are all different but each one acts as a master key upon the entrance door locks.

No extra charge is made for locks except for those subject to the master key.

The Maison Master system is identical with the Maison system except that all locks in the building are subject to a master key.

Locks ordered for entrance doors under the Maison system should be ordered grand master keyed.

CYLINDER MASTER KEYS

This Type of Key Regularly Furnished

This Type Furnished Only When Specified

MASTER KEYABLE BITTED KEY LOCKS

Locks Having Same Master Key can be Master Keyed Together in Sets. Master Keys 647 and 677 will interchange.

For Description of Finishes, see Page 3

RUSWIN**THE RUSSWIN UNIT LOCK SETS**

(Patented)

The Unit Lock offers everything to be desired in a lock. It represents the height of the art of lock making. It is easily applied, requiring no mortising. A rectangular hole only 1 3/4 in. deep is cut into the stile of the door with a saw and one hole is bored to receive the knob.

The inside and outside escutcheons are mechanically doweled together assuring perfect alignment, eliminating the binding of the knob which so frequently occurs with the ordinary lock set.

The long swinging latch is actuated by a phosphor bronze spring and the knobs by a separate phosphor bronze spring. This allows the use of a light spring for the latch, insuring easy action, and a heavy spring in the knobs, bringing them firmly back to a normal position and preventing rattling.

The knobs are seamless solid bronze castings. The shanks are self-lubricating and absolutely screwless, each

being fitted to long bracket bearing thimbles of the supporting type. The self-lubricating shanks reduce friction to a minimum.

The lock is controlled by a cylinder located in the concave of the knob, thereby giving security and the assurance of finding the key hole easily.

All parts of the Unit Lock—knobs, escutcheons and lock frame, are solid bronze metal castings, with the exception of the locking mechanism, which is of heavy hard rolled brass formed in dies, insuring uniformity and imparting the greatest possible strength.

Attention is called to the two types of safety devices. The auxiliary latch safeguards against outside manipulation and the deadlocking plunger safeguards the latch and prevents operation of the stops when the door is closed.

Master Keying—The cylinders used in Unit Locks are identical with the Russwin Ball Bearing Cylinders, and are also subject to the same master keying systems.

Important Note Regarding Designs

Unit Lock Trim can be obtained in the following designs: Camden, Copley, Fidelity, Granby, Madison, Niantic Pyramid; see Page 43.

The illustrations show general type only.

Phantom View of Construction and Parts of the Russwin Unit Lock Set; Horizontal Type

To install the lock, the small amount of cutting required (only 1 3/4 ins.) of the stile, does not impair its strength.

A Vertical Type or 2800 Line Unit Lock Installed

Note difference between this lock and the horizontal type as illustrated in phantom view

UNIT LOCKS FOR RESIDENCE FRONT DOORS**2850 Upright and 2150 Horizontal Type**

Latch bolt can be operated by knobs from either side except when outside knob is set by stops in face of lock. When knob is set, latch can be operated by key only from outside, and by knob from inside.

In addition it has a dead bolt operated by key from outside and by turn knob from the inside. A continuous turn of key on outside will operate both dead and latch bolts.

Master Keying—Can be master keyed in sets as desired with other RUSSWIN Cylinder Locks.

No.	Type	Cylinder
2850	Upright	One
2150	Horizontal	One

UNIT LOCK FOR VESTIBULE OR OFFICE DOORS**2856 Upright and 2156 Horizontal**

Latch bolt can be operated by knobs from either side except when outside knob is set by stops in face of lock. When outside knob is set, latch can be operated by key only from outside and by knob from inside.

2866 Upright and 2166 Horizontal—In addition to the above they have deadlocking plunger, automatically deadlocking and safeguarding the latch bolt, preventing it from being retracted by any instrument inserted between face of lock and strike. It also prevents manipulation of stops when door is closed, thus making lock absolutely secure against entrance except by key.

Master Keying—Can be master keyed in sets as desired with other RUSSWIN Cylinder Locks.

FOR ENTRANCE DOORS TO APARTMENT HOUSES, SCHOOLS AND PUBLIC BUILDINGS**2859¹/₂ Upright and 2159¹/₂ Horizontal Types**

Latch bolt can be operated by knobs from either side except when outside knob is set by master (or janitor's) key through the inside cylinder. When knob is set, latch can be operated by change or master key only from outside, and by knob from inside. The auxiliary latch automatically deadlocks and safeguards latch bolt, preventing retrac-

tion by any instrument inserted between lock face and strike.

The janitor or custodian has absolute control over the outside knob, as the change or master key in retracting the latch bolt does not disturb the deadlocking mechanism of the outside knob.

Especially adapted for use on double doors.

2859¹/₂

No.	Type	Cylinder	No.	Type	Cylinder
2859 ¹ / ₂	Upright	Two	2159 ¹ / ₂	Horizontal	Two

Can be furnished reverse bevel for doors opening out.

FOR PUBLIC BUILDINGS**2816 Upright and 2116 Horizontal Types**

Latch bolt can be operated by key only from outside, by knob from inside. The outside knob is always rigid.

This lock can be equipped with a dead locking plunger which will deadlock and safeguard latch bolt, preventing retraction by any instrument inserted between lock face and strike. When plunger is desired, prefix "P" to number.

When equipped with plunger, this lock can be furnished reverse bevel for single doors opening out. For use on double doors opening out, it can be furnished with auxiliary latch which serves the same purpose as plunger. When auxiliary latch is desired, prefix "A" to number.

UNIT LOCKS FOR DOUBLE DOORS

For Rabbeted Doors—Fig. 1 shows the RUSWIN Unit Lock applied to rabbeted doors with Double Trim. It may be applied in the same manner without the double trim. These locks are for doors with 1/2-in. rabbet. All numbers and designs of Unit Locks will be furnished when so ordered, equipped with strike for use with rabbeted door.

Specify Lock Set Number, Name of Design and suffix "Rabbeted."

For Dummy Trim—Fig. 2 shows Unit Lock with Dummy Trim applied. All Unit Locks can be furnished, when so ordered, fitted with Dummy Trim. Locks so ordered will be fitted with full pair of dummy knobs and escutcheons; knobs rigid, for both sides of Inactive Door.

Specify Lock Set Number, Name of Design and suffix "Dummy Trim."

Half Double Trim—Same as for Dummy Trim except with only one dummy knob and escutcheon for use upon one side of Inactive Door. Knob made rigid.

Showing rabbeted front locks

Fig. 2. View from Outside of Door
Showing flat front locks

UNIT LOCKS FOR COUPON BOOTH DOORS

2196 Horizontal—Latch bolt can be operated by key only from outside, by knob from inside.

The door is held open when the booth is not occupied, by a special stop or stay attached to the door. Stop is placed in position by the attendant to hold the door open, releasing automatically when patron opens the door. A closer closes the door which is always locked when in the closed position. The keyhole is concealed by a revolving disc which has been thrown in position by the attendant.

The occupant on leaving opens the door by turning the inside knob. This operation releases the circular disc, which revolves automatically and exposes the keyhole, indicating to the attendant in charge that the booth is vacant.

As the door is closed by means of the closer, after the departure of the patron, the booth is secure against other patrons of the institution until it has been inspected by the attendant who can examine the booth for any valuables left by the last occupant. He then places the door stop in position and throws the disc over the keyhole; the booth now being ready for the next patron.

Left-hand Reverse Bevel

COUPON BOOTH DOOR LOCK AND HOLDER

Set 01297 Lenox

Automatic Door Holder No. 68

No. 68 Applied Door Held Ajar

01297—Latch bolt can be operated by key only from outside, by knob from inside. The outside knob is always rigid and acts as a pull.

The door of the booth is held open when unoccupied by the Automatic Door Holder. The client entering the booth releases the door holder and the door, controlled by a closer, closes quietly and locks. The occupant merely turns the knob to leave. The turning of the knob operates a red indicator on the outside escutcheon, indicating to the attendant that the booth is now vacant. As the door has been closed, after the departure of the client by means of the closer, the booth is secure against other patrons until it has been inspected by the attendant. After inspecting, he then throws the indicator back and sets the door holder, leaving the door ajar for the next occupant.

No.	Type	Knob	Escutcheons, in.	Cylinder
2196	Horizontal	One	Inside, 3 1/8 x 4 7/8 Outside, 4 3/4 x 4	One special (under disc)

For full description of the operation and functions of these locks, see Page 40.

Can also be furnished in the upright type, as other designs shown herewith.

Note: If the exact thickness of the doors is given the locks will be machined and especially fitted for the thickness of door specified. Unit locks will be furnished, if so ordered, adjustable for doors of the following thicknesses: $1\frac{1}{2}$ to 2, 2 to $2\frac{1}{2}$, $2\frac{1}{2}$ to 3 in. Minimum and maximum thicknesses should be specified as 1 set locks No. 2850 Lenox, $1\frac{1}{2}$ to 2 in.

RUSWIN**LOCKS FOR PUBLIC BUILDINGS****R&E**
SINCE 1839BANKS
FRATERNALLIBRARIES
CHURCHESGOVERNMENTAL
MUSEUMSCLUBS
HOSPITALSSTORES
FACTORIESINSTITUTIONS
WAREHOUSES*See special classification for Office Buildings, Hotels, Apartment Houses, Schools and Residences*

Public buildings of the above types, on account of the services to which they are put, demand hardware that must have as first consideration extreme durability and reliability. The design and finish of this hardware must be attractive and durable, as it is subject to the use and scrutiny of great numbers of people and in most cases receives hard usage.

Special Hardware Requirements

Almost every building of a public character such as those noted above has special requirements, especially in regard to the locking arrangements, which need special attention. Each type of building has its own requirements. Even in buildings of a similar type the locking arrangements may be very different. For this reason separate lists of hard-

ware are not given in this catalogue for some of these buildings.

Before Writing Specifications

Supplying public buildings with hardware for years has furnished the Company with a wealth of experience. This experience is all at the service of the architect, and will assist him greatly in the problems confronted by him.

We therefore suggest, whether our hardware is finally selected or not, that before starting to write the hardware specification, we should be consulted. A hardware expert from one of our offices or agencies, will be glad to advise as to the hardware which will best meet the requirements of the building under consideration. This will be done without obligating the architect in any way.

LOCKS FOR OFFICE BUILDINGS

All of the locks in Group One, listed below, are of the Unit Type and embody the best features obtainable in the art of lock-making today. See Pages 40 to 43.

The locks on the corridor doors should be subject to the keys of individual and private offices.

Locks on the lavatories of each floor should be subject

to the keys of all the individual office door locks of their respective floors only.

All office door locks may be master keyed by floors or in sets as desired for janitor service, with a grand master key for the entire building.

Keying systems for cylinder locks can be changed at any time to fit special conditions or requirement of tenants.

*Latch bolts have 3/4-in. throw to meet Underwriters' requirements.

CYLINDER KNOB LOCKS FOR ENTRANCE DOORS TO PUBLIC BUILDINGS**1228, 1228 1/2, 1225, 1225 1/2 Cylinder Locks for Heavy Entrance Doors****1228, 1228 1/2****066 1/2**

These locks are for similar services. The 1228 and 1228 1/2 are the heavier. The latch bolt which is of the anti-friction type, insuring easy action, can be operated from either side at all times.

The locks in addition have a dead bolt. The bolt in 1228 and 1225 is operated by a key from the outside and by turn knob from the inside. In 1228 1/2 and 1225 1/2 it is operated by key from either side. A continuous turn of the key withdraws both dead and latch bolts.

GENERAL CONSTRUCTION

Case: Japanned iron.

RUSWIN**CYLINDER LOCKS FOR ENTRANCE AND CORRIDOR OFFICE DOORS****Especially Adapted for Doors Opening Out**

No. 1457 (Latch bolt has $\frac{3}{4}$ in. throw) for Kalamein and other Fire Doors; No. 11456 has Standard Latch Throw

These are heavy locks for services noted above in high class buildings. Anti-friction Type Latch Bolt can be operated by knobs from either side except when outside knob is set by stop in face of lock. When knob is set, latch bolt can be operated only by key from outside and by knob from inside.

An Auxiliary Latch automatically dead locks and safeguards the latch bolt, preventing retraction by instruments inserted between the face of lock and strike. It also prevents manipulation of stops when door is closed, making the lock secure against entrance except by key.

GENERAL CONSTRUCTION

Case: Japanned iron. Fronts, Hub: Brass. For $\frac{1}{8} \times \frac{3}{8}$ in. swivel
Bolts, Strikes: Cast bronze. spindle.
Bevel: $\frac{1}{8}$ in. on 2-in. Latch Construction: 1457, CL;
Cylinder: Bronze. Keys: Liberty 11456, EC.
silver. Reversible: No. Specify hand.

LOCK FOR OFFICE DOORS GIVING ABSOLUTE PRIVACY

Cannot Be Opened from the Outside When Dead Locked

No. 1239 $\frac{1}{4}$ heavy lock for entrance and corridor doors. Anti-friction type latch bolt can be operated by knobs from either side except when outside knob is set by stop in face of lock. When knob is set, latch bolt can be operated only by key from outside and knob from inside. Latch bolt can be deadlocked by turnknob inside, making keys inoperative from outside. The lock then offers absolute security against intrusion.

INEXPENSIVE OFFICE DOOR AND VESTIBULE ENTRANCE LOCKS WITH DEAD LOCKED LATCH BOLT FOR USE WITH KNOBS AND HANDLE

These locks can be used when an inexpensive lock is desired for the doors of offices or the vestibule entrance of apartment houses. They afford only the protection from the outside of a dead locked latch.

For locks offering greater protection for vestibule entrance to apartment houses see 1458 $\frac{1}{2}$, 1258 $\frac{1}{2}$ and 9152 $\frac{1}{2}$.

1239 $\frac{1}{2}$ 1248 $\frac{1}{2}$ 

1223

1239 $\frac{1}{2}$ and 1248 $\frac{1}{2}$ For Knobs Both Sides—Which operate the latch bolt except when outside knob is dead locked by stops in face of lock, then by key only from outside. Latch bolt can always be operated by knob from inside.

1223 For Handle With Thumb Piece Outside and Knob Inside—The control is the same as for 1239 $\frac{1}{2}$ and 1248 $\frac{1}{2}$.

GENERAL CONSTRUCTION

Case: Japanned iron. Fronts, Bolts, Strikes: Cast bronze.
Bevel: $\frac{1}{8}$ in. on 2-in.
Cylinder: Bronze. Keys: Liberty silver.
Hub: Brass. For $\frac{1}{8} \times \frac{3}{8}$ in. swivel spindle.

Latch Construction: 1239 $\frac{1}{2}$, EC; 1248 $\frac{1}{2}$, CL; 1223, CSL.
Reversible: 1239 $\frac{1}{2}$, No; 1248 $\frac{1}{2}$, Yes; 1223, Yes.
Lock Width: 1239 $\frac{1}{2}$ and 1248 $\frac{1}{2}$, 1 in. more than backset; 1223, $1\frac{1}{8}$ in. more than backset.

RUSSWIN**LOCKS ESPECIALLY USEFUL
FOR SCHOOL HOUSES****R&E**
SINCE 1839

The locks illustrated or listed below are especially adaptable for school house work. All these locks whether for exterior or interior doors can be operated at all times from the inside.

Exterior door locks are used in connection with Fire Exit Bolts, thus insuring absolute safety to the occupants of the building. Doors so equipped can always be operated

from the inside, but prevent entrance from the outside by unauthorized persons.

All locks in a building or in a system of schools may be master keyed in one set with a grand master key over all. Where bitted key and cylinder locks are used together, a separate master key system must be employed for each type of lock.

INDEX TO LOCKS FOR SCHOOLS

Index and suggested layout of locks arranged in groups, horizontally according to choice and vertically according to quality and use. Group 1 is the highest grade.

CYLINDER LOCKS FOR ENTRANCE OR CORRIDOR DOORS

When high grade cylinder locks are desired for entrance or corridor doors see table above for lock and page number.

As the locks noted are used for other services they are not repeated here.

BITTED KEY LOCKS FOR CORRIDOR DOORS

These locks are especially designed for corridor or classroom doors as they allow free operation at all times from the classroom side without having to unlock the lock but afford required protection from entrance from the corridor side.

444 3/4—Has easy spring latch bolt operated by knobs from either side. Inside knob is free to operate at all times. Outside knob can be locked by key from either side. Also has auxiliary latch which is automatically released when outside knob is locked and safe guards the latch bolt, preventing it from being retracted by any instrument inserted between face of lock and strike. When outside knob is unlocked the auxiliary latch is held retracted. Lock is regularly furnished master keyed; if this feature is not desired it must be so specified.

00125—Operates the same as 444 3/4. Latch bolt is protected, from being retracted by any instrument inserted between face of lock and strike, by recessed front instead of auxiliary latch.

GENERAL CONSTRUCTION

Case: Japanned iron. Front, Bolts, Strikes: Cast bronze.
Tumblers: Lever. Keys: Nickelplated steel.
Hub: Brass. For 1/8 x 3/8 in. swivel spindle.

Latch Construction: CL.
Reversible: 444 3/4 and 00125, no; specify hand.
Master Keying: 3 sets 100 each or 300 all different.

Lock No.	Front		Size case in.	Backset, in.		Strike lip, to center, in.	Spacing, in.	Tumblers	Keys	Changes	Turn knob	Latch bolt
	Type	Size, in.		Std.	Spec.							
444 3/4	Flat	7 3/8 x 1 1/8	5 1/2 x 3 3/4 x 3/8	2 3/4	2 1/2	1 1/4	2 5/8	Lever	One	48	None	Easy spring

BITTED KEY LOCK FOR CLOSET DOORS

Suitable locks for closet doors are noted in the index and as full information in regard to them is given on the

pages to which they are referred—they have not been repeated under this heading.

LOCKS FOR STORE DOORS USING HANDLES

These locks are designed for use on the entrance doors to stores where a double swinging door is not used. They are used when a handle and thumb piece is desired on both sides of the door.

9118, 9119, 9132, 9098 and 9098 1/2

9118 and 9119 are similar in construction. The latch bolt for both locks is operated by thumb piece from either side, except when outside thumb piece is set by stops in face of lock, when it can be operated by key from outside and thumb piece from inside. In addition a dead bolt is operated in 9118 by key from both sides and in 9119 by turn knob from inside, and key from outside. A continuous turn of key from outside will withdraw both dead and latch bolt.

9132 and 9098 are similar in construction. Latch bolt is operated by thumb piece from either side at all times. In addition they have a dead bolt operated by key from either side. 9132 is heavier than 9098.

9098 1/2 same as 9098 but has rabbeted face.

GENERAL CONSTRUCTION

Case: Japanned iron. Front, Bolts, Strikes: Cast bronze.
Cylinder: Bronze. Keys: Liberty silver.
Latch Construction: SC.

Reversible: 9118, 9119 and 9098, yes; 9132 and 9098 1/2, no; specify hand.
Lock Width: 1 in. more than backset.

Hotel Locks

We recommend locks in Groups 1-2-3 and 4 in the order shown as being the most satisfactory equipment yet devised in the way of hotel room locks.

In selecting equipment for locking hotel room doors, three important things should be considered.

1. Absolute privacy for the guest when room is occupied, and the exclusion of unauthorized persons when unoccupied.

2. Some means of indicating room is occupied, without disturbing the guest.

3. Means of entering room by maid when room is unoccupied, and the ability of the Management to enter room at all times in case of emergency.

RUSSWIN Hotel Locks as listed in Groups 1-2-3 and 4 combine all these features.

Note: Corridor Locks automatically locked when door is closed. 1446EM, 1447EM, 1448EM, 1449EM, 1233REM, 1233AEM, 1246½EM.

Corridor Locks which must be locked by key after closing door. 1232EM, 609½EM, 608½EM, 610½EM, 611½EM, 0015½EM.

Lock Group 1

Cylinder Locks (indicated by daggers) in Group 1 cannot be master keyed with the bitted key locks under this head-

ing. The corridor and closet doors are usually arranged under one system and the communicating and bathroom locks under another control, the master key in such cases being retained by the room clerk. Under this arrangement rooms may be rented ensuite or separately, with or without bathrooms.

We recommend Cylinder Locks for corridor and closet doors. Communicating and bathroom locks are bolted by means of turn knobs, made operative or inoperative by a bitted master key under the control of the management. No cylinders are required.

Lock Group 2-3-4-5 and 6

All locks listed in Groups 2-3-4-5 and 6, with the exception of those which do not have or require keys, may be master keyed in the same manner, i.e., in two systems or can be master keyed in one system.

When two systems are used locks shown for corridor and closet doors in one group may be used in connection with locks for the other types of doors in another group. This should be avoided if possible, and is not necessary, as in some instances a choice of four locks is given.

Corridor locks shown in Groups 5 and 6 are not strictly Hotel Locks, and do not have all the functions which a corridor lock should have. They are suitable for use however, in small Inns and Hotels with a limited number of rooms.

For Description of Finishes, see Page 3

RUSSWIN**THE IMPORTANCE OF THE HARDWARE IN THE SATISFACTORY OPERATION OF A HOTEL****R&E**
SINCE 1839

It is a well known fact that the character of the hotel depends to a very large extent on the locking system and the amount of control the hotel management has over the locking system.

This is especially true of the locking system on communicating doors between rooms. Unless the management has absolute control of this type of room, the

hotel cannot be kept up to standards of the highest character.

A good lock for the guest room doors to corridor and closets is a good investment. It will save the management many dollars for the adjustment of claims from theft. It will give the guest a feeling of privacy and security from intrusion which is highly desirable.

The Advice of Hotel Hardware Specialists

It is hoped that the diagram and index to locks will be of assistance in the selection of the proper locks, for various services. We also urge that the expert services of the hotel specialists of the company be called upon. A highly specialized department has been created at the general offices,

for the purpose of giving architects the benefit of years of experience in solving problems that arise in connection with the hardware equipment of hotels.

Russwin Hardware for hotel use conforms to all the codes formulated for the protection of patrons.

TABLE OF COMPARATIVE FEATURES AND FUNCTIONS OF HOTEL CORRIDOR LOCKS

1233AEM	2 3/4	x	x	x	x	x	x	x	x

Corridor Door Lock with Double Safety Feature

1448EM Lock—This lock is designed to guarantee absolute privacy to guest—when in room. The closing of the door automatically locks it from outside; it can then only be opened by key. Outside knob is rigid at all times and has no connection with operation of lock. When guest is in room and desires absolute privacy, the door is deadlocked by key-locking the inside cylinder. The inside key-locking disengages the outside cylinder from the locking mechanism. The emergency key is then the only key that will engage or operate lock from outside of room—all other keys revolve freely without engaging. An auxiliary latch safeguards the latch bolt from being retracted and the forcing of door by insertion of sharp instrument between face of lock and strike.

066 1/2

As an additional safeguard there is a dead bolt operated by cylinder on inside and emergency key, only, on outside. Furnished with Indicator B, if desired. (Page 38.)

The door when locked, but not deadlocked, is subject to following keys: guest's, maid's master, grand master, display and emergency; when deadlocked, to emergency key only.

The revolving feature of cylinder, when deadlocked, stops attempted forcing of lock, thus saving wear and tear on locks and twisting and breaking of keys.

1449EM—Same as 1448EM except that it has turn knob in place of inside cylinder.

**1448EM
1449EM****Corridor Door Lock with Single Safety Feature**

1446EM—When door is closed the latch bolt is automatically deadlocked, and lock can be operated by key only from outside and by knob from inside. Outside knob is rigid at all times. Auxiliary latch automatically deadlocks and safeguards the latch bolt, preventing it from being retracted by any instrument inserted between the face of the lock and strike. It can also be locked by key from inside, then all keys are made inoperative from the outside except the emergency.

When thus locked, the outside cylinder is disengaged from the locking mechanism and any key, except the emergency on the outside, revolves freely without engaging any part of the locking mechanism, indicating that the room is occupied.

This feature eliminates strain of any kind on the lock and prevents the twisting and breaking of keys by maids.

Can also be furnished with Indicator B if desired (see Page 38).

The latch cannot be deadlocked when door is open, thus preventing any damage to the lock when latch bolt comes in contact with strike.

When not locked by key on inside, the lock is subject to guest's, maid's master, grand master, display and emergency keys.

1447EM—Same as 1446EM except that it has turn knob in place of inside cylinder.

066 1/2

RUSWIN**CYLINDER LOCKS FOR HOTEL CORRIDOR DOORS****R&E**
SINCE 1839

1234½EM—This lock has no turn knob. Latch bolt can be operated from either side at all times. In addition it has dead bolt operated by key from both sides. The dead bolt has a direct throw; the key turns in the direction in which it is desired to throw the bolt.

1234½EM
1233REM
1232EM

066½

Can be furnished with guest's, maid's master, grand master, display and emergency keys.

1233REM—When door is closed it is automatically locked, and lock can be operated by key only from outside and by knob from inside. Outside knob is rigid at all times. In addition it has a dead bolt operated by turn knob on the inside and by emergency key only from outside. When deadlocked the outside cylinder is disengaged from the locking mechanism and any key, except the emergency, on the outside, revolves freely without engaging any part of the locking mechanism indicating that the room is occupied.

This feature eliminates strain of any kind on the lock and prevents the twisting and breaking of keys.

When not deadlocked, the lock is subject to guest's, maid's master, grand master, display and emergency keys.

1233AEM—This lock is similar to 1233REM except that the front is flat and the lock is reversible. The operation is exactly the same as 1233REM and is for the same uses.

1250SM—Type of 1233AEM but without deadbolt. Not reversible; specify hand. Latch bolt operated by knobs from either side except when outside knob is set by stops and then by key only from outside and knob inside. When turn knob is thrown, knobs are rigid and latch bolt is deadlocked.

1246¾EM

1232EM—Latch bolt can be operated by knobs from either side at all times. In addition it has a dead bolt operated by turn knob from inside, and key from outside. When deadlocked by turn knob from inside all keys except the emergency are made inoperative. When dead bolt has been thrown by turn knob on inside, indicator shows room is occupied.

Can be furnished with guest's, maid's master, grand master, display and emergency keys.

1246¾EM—When door is closed it is automatically locked, and lock can be operated by key only from outside and by knob from inside. Outside knob is rigid at all times. In addition the latch bolt can be deadlocked by turn knob inside, making all keys inoperative except the emergency. If indicator is desired, specify Indicator B (see Page 38). When latch bolt is deadlocked, indicator shows that room is occupied.

066½

Can be furnished with guest's, maid's master, grand master, display and emergency keys.

Indicator—If indicator is desired on above locks, specify Indicator B (see Page 38).

GENERAL CONSTRUCTION

RUSWIN**MORTISE BITTED KEY LOCKS FOR HOTEL CORRIDOR DOORS****R&E**
SINCE 1839

The locks illustrated are designed especially for use on the door from corridor to guest room. They offer the greatest security to the guest and are the highest development in the bitted key type of lock. The locks have two dead bolts operated from opposite sides.

When the inside bolt is thrown by the guest by means of a key the only key which can operate the lock is the emergency key. This gives the guest absolute privacy from operation of the lock by maid's or other regular master keys.

Bitted Key Corridor Door Locks Offering the Greatest Security to the Guest Can Be Opened Only by Emergency Key When Locked on Inside

608 $\frac{1}{4}$ EM—High Grade Corridor Door Lock—Latch bolt can be operated by knobs from either side at all times.

In addition it has two dead bolts, operated thru separate keyholes. The lower bolt is operated by key from inside at all times, and when thrown all keys except the emergency are made inoperative from outside. The upper bolt is operated by keys from outside. Can be furnished with guests', maid's master, grand master, master guard, display and emergency keys.

If indicator is desired, specify Indicator "B" (see Page 38). When lower bolt is thrown indicator shows that room is occupied.

Master Keying—Can be furnished in one set of 4000 locks, all different, or subdivided into 20 sets or less, with master key for each set and grand master key for all.

609 $\frac{1}{4}$ EM—This lock is similar to 608 $\frac{1}{4}$ except that it is lighter and has less master keying facilities.

Master Keying—Can be furnished in one set of 2160 all different, or subdivided into 24 sets or less, with master key for each set and grand master key for all.

610 $\frac{1}{4}$ EM—This lock is similar to 609 $\frac{1}{4}$ EM including master keying except that it does not require an indicator. When the lower bolt is thrown from the inside, the outside knob is made inoperative, indicating that the room is occupied.

Inexpensive Bitted Key Lock for Corridor Doors

0015 $\frac{1}{4}$ EM—This is a lighter lock for corridor doors than those illustrated above. Latch bolt can be operated from either side by knobs at all times.

In addition it has two dead bolts. The upper bolt can be operated by key only from outside. The lower bolt by turn knob from inside. Turn knob will also withdraw upper bolt when thrown from outside by key. When locked from inside by turn knob all keys except the emergency are made inoperative. The emergency key will operate at all times to retract the upper and lower bolts, but will not protect the lower bolt, therefore cannot function as a guard key.

**0015 $\frac{1}{4}$ EM****066 $\frac{1}{2}$**

Can be furnished with guests', maids' master, grand master and emergency keys.

Master Keying—Can be master keyed in one set of 300 or less, all different, or subdivided into 6 sets or less, with master key for each set, and grand master key for all.

RUSWIN**MORTISE BITTED KEY LOCKS FOR HOTEL COMMUNICATING DOORS****R&E**
SINCE 1833

Two different sets of locks are shown for different services. 1121 $\frac{3}{4}$ M and 1133 $\frac{3}{4}$ M are for single doors between communicating bed rooms or rooms in suites which can be rented separately, see diagram and table Page 47. The split dead bolt, which can be made inoperative in either the locked or unlocked position by the management by means of a master key, is the special feature of these locks.

1122 $\frac{3}{4}$ M and 1134 $\frac{3}{4}$ M are for single doors as between bed rooms and living or for bath room door or for use on double or twin communicating doors between bed rooms which can be rented separately. They have a single bolt operated from one side only. This bolt can also be made inoperative in either a locked or unlocked position by master key of the management.

1121 $\frac{3}{4}$ M066 $\frac{1}{2}$ **Locks with Split Dead Bolt**

1121 $\frac{3}{4}$ M High Grade—Latch bolt can be operated by knobs from either side at all times. In addition it has split dead bolts operated by turn knobs from opposite sides. When either half bolt is thrown from one side it can not be retracted from the opposite side. Master or grand master key will deadlock turn knob when dead bolts are either thrown or withdrawn.

Change keys are not required and not furnished unless specified.

Master Keying—One set of 1000 or less, all different, or subdivided into 20 sets or less with master key for each set, and grand master for all.

1133 $\frac{3}{4}$ M Medium Grade—This lock has the same functions as 1121 $\frac{3}{4}$ M. Can only be master keyed in one set of 300 or less or 6 sets of 50 with master key for each and grand master for all.

1133 $\frac{3}{4}$ M066 $\frac{1}{2}$ **Locks with Single Dead Bolt**

1122 $\frac{3}{4}$ M High Grade—Latch bolt can be operated by knobs from either side at all times. In addition it has a single dead bolt operated by turn knob from one side only. Master and grand master key will deadlock turn knob when dead bolt is either thrown or withdrawn.

Change keys are not required, and not furnished unless specified.

Master Keying—One set of 1000 or less, all different, or subdivided into 20 sets or less, with master key for each set, and grand master key for all.

1134 $\frac{3}{4}$ M Medium Grade—This lock has the same func-

tions as 1122 $\frac{3}{4}$ M. It can only be master keyed in one set of 300 or less or 6 sets of 50 with master key for each and grand master for all.

MORTISE BITTED KEY LOCKS FOR HOTEL CLOSET DOORS

These locks can be and are usually made to be controlled by the guests individual corridor (or rooms) door key.

When so controlled they are not subject to any of the

various master keys except the emergency, thus affording the guest protection from petty theft.

This control can also be used for 384 $\frac{3}{4}$ GM, 380 $\frac{3}{4}$ GM, 0370 $\frac{3}{4}$ when used with Hotel Corridor Bitted Key Locks.

1387 $\frac{3}{4}$, 387 $\frac{3}{4}$, 1384 $\frac{3}{4}$
—These locks are similar in function, differing in quality and weight of lock.

Latch Bolt can be operated by knobs from either side at all times. In addition have dead bolt operated by key from either side. 1387 $\frac{3}{4}$ and 1384 $\frac{3}{4}$ have the key for dead bolt above knobs.

RUSWIN**LOCKS FOR APARTMENT HOUSES
AND DORMITORIES****R&E**
SINCE 1839

Apartment house hardware has many of the characteristics of both hotel and residential hardware. It draws much from both types, and yet has distinctive features of its own.

Apartment houses equipped with RUSWIN hardware and master keyed in that system, afford to the occupants the privacy of the residential house, and the conveniences of the hotel. The same specialized service that is furnished on other types of buildings is supplied to the architect planning the new apartment house.

Apartment houses are of three general types:

1. The apartment hotel.
2. Two or more residences under one roof or otherwise grouped.
3. A combination of two first named.

For buildings referred to as Type One, see Hotel Locks, Pages 47 to 51.

For buildings as Type Two see Residential Locks, Pages

**JANITOR CONTROLLED LOCKS FOR ENTRANCE DOORS TO APARTMENT HOUSES,
SCHOOLS AND PUBLIC BUILDINGS**

These locks offer greater protection for vestibule doors than those with stops on the face of the lock controlling the setting of the outside knob. Stops can be operated by anyone, while the door is open, making the outside knob operative or inoperative.

With the locks illustrated below the outside knob can be made operative or inoperative, only by means of a master or janitor's key. This makes it impossible for unauthorized persons to manipulate the dead locking of the latch when the door is open.

1457 1/2M for Kalamein and Fire Doors (latch bolt has 3/4-in. throw for Underwriter Doors), 11458 1/2M (with standard latch throw) Have Knobs Both Sides—1457 1/2M and 11458 1/2M are similar except for throw of the latch bolt. Latch bolt can be operated by knobs from either side, except when outside knob is set by master (or janitor's) key through

the inside cylinder. When outside knob is set, latch bolt can be operated by key only from the outside and by knob from inside.

They also have the protection of an auxiliary latch, which automatically dead locks and safeguards latch bolt, preventing it being retracted by any instrument inserted between the face of the lock and strike. The regular change, master (or janitor's) keys will operate outside cylinder, but only the master (or janitor's) key will operate the inside cylinder, unless otherwise specified.

Latch bolts are of the anti-friction type insuring easy action.

11258 1/2M, Knobs Both Sides—Similar to 11458 1/2M except does not have the auxiliary latch.

9152 1/2M, Handle With Thumb Piece Both Sides—Similar to 11458 1/2M except that it is used with handles and thumb pieces both sides.

RUSSWIN**LOCKS FOR RESIDENCES****R&E**
SINCE 1839

Exterior cylinder locks for the front, rear and side entrances, and garage, may be keyed alike or all different, yet subject to the key of the front entrance door. This permits the use of various doors by different individuals as maid or chauffeur,

without the necessity of intruding on the privacy of the owner.

Bitted key locks cost less than cylinder locks and afford the requisite security on interior doors. If desired they may all be keyed alike or all different, subject to a master key.

MORTISE KNOB LOCKS FOR BATH AND COMMUNICATING ROOM DOORS FOR RESIDENCES ALSO APARTMENT HOUSES AND HOTEL BATH ROOMS

R&E
SINCE 1838

These locks have latch and dead bolts, the dead bolt being operated from the bathroom side by a turn knob. For communicating doors use locks with suffix $\frac{1}{2}$ as this indicates a lock with two turn knobs operating a split dead bolt, half of which can be operated from each side.

238, 236, 233, 223 Locks With Single Dead Bolt for Bathrooms—Latch bolt can be operated by knobs from

either side at all times. In addition they have a single dead bolt operated by turn knob from one side only. In case of necessity dead bolt can be operated from opposite side of door by square stem key.

238 $\frac{1}{2}$, 236 $\frac{1}{2}$, 233 $\frac{1}{2}$, Locks with Split Dead Bolt for Communicating Doors—Latch bolt operated by knobs from either side at all times. In addition they have split dead bolts operated by turn knobs from opposite sides. When bolt is thrown from one side it can not be retracted from the other.

GENERAL INFORMATION REGARDING PROPER LOCKS TO USE ON FRENCH DOORS

When French doors are used they generally have narrow stiles. This necessitates a different kind of lock and trim treatment from that on door having standard width stiles. If the stile is less than 4-in., lever handles should be used, as knobs would leave too little room to operate the latch without knocking the fingers on the door jamb.

Lever handles should never be used on a lock designed for use with knobs as the constant weight of the lever handle would spoil the regular spring. The locks as listed for French doors are designed especially for use with lever handles. They are made with two types of springs, French Spring and Gun

Spring. These springs are designed to offset the weight of the lever handle.

Backsets of varying dimensions are listed to take care of almost any width of stile. The backset plus 1 in. will give the full width or depth of lock case.

On the illustration of various handles, on Page 29, the projection of the handles are given. This should be taken into consideration especially if two doors come together as on exterior and screen doors. If there is not sufficient room between the doors for the handles to clear, the screen door hardware should be raised to stagger the hardware.

NARROW MORTISE CYLINDER LOCKS FOR EXTERIOR FRENCH DOORS

Designed especially for use on exterior French doors and can be master keyed on the same system as the regular cylinder locks in other parts of the building.

F1247 Flat and F1277 Rabbeted Face with Cylinder Lock and Dead Bolt—F1247 $\frac{1}{2}$ Flat and F1277 $\frac{1}{2}$ Rabbeted Face with Cylinder but without Dead Bolt—F1247 and F1277 are alike except for face of lock. Latch bolt can be operated by lever handle from either side, except when outside handle is set by stops in face of lock, then the latch bolt can only be operated by key from outside and lever handle inside. In addition these locks have a dead bolt operated by key from outside

F1247

066 $\frac{1}{2}$

and by turn knob from inside. A continuous turn of key will withdraw both dead and latch bolt.

F1247 $\frac{1}{2}$ and F1277 $\frac{1}{2}$ are similar to F1247 and F1277 except they do not have the dead bolt feature.

Note: All these locks have the French Spring Type of easy construction, which gives a strong action on the hub and an easy action on the latch, making it especially adapted for use with lever handles.

GENERAL CONSTRUCTION

Case: Japanned iron. Front, Bolt, Strikes: Cast bronze.

Keys: Liberty silver.

Cylinder: Bronze.

Hub: Brass. For $\frac{1}{8}$ x $\frac{3}{8}$ -in. swivel spindle.

Latch Construction: French Spring Type F.

Reversible: No, specify hand.

Lock Width: 1-in. more than backset.

RUSSWIN

MORTISE CYLINDER LOCK FOR EXTERIOR FRENCH DOORS

F1238 Flat Face With Cylinder Lock and Dead Lock—This lock is somewhat similar to Lock F1247 except that the case is wider and cannot be used on doors with narrow stiles. Latch bolt can be operated with knobs or lever handles both sides, except when outside knob or handle is set by stop in face of lock, then the latch bolt can be operated only by key from outside and knob or lever handle inside. In addition it has a dead bolt operated by key from outside and turn knob inside. A continuous turn of key will withdraw both latch and dead bolt.

This is a high grade cylinder lock for use on exterior French doors which do not have a stile less than 4-in. It can be used with knobs or lever handles.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front, Bolts, Strikes: Cast bronze.
Cylinder: Bronze.
Keys: Liberty silver.
Hub: Brass for $\frac{1}{8}$ x $\frac{3}{8}$ -in. swivel spindle.
Latch Construction: French Spring Type F.
Reversible: No, specify hand.
Lock Width: 1-in. more than backset.

Lock No.	Front		Size case, in.	Backset, in.		Strike, lip to center, in.	Spacing, in.	Cylinder	Keys	Changes	Turn knob	Latch bolt
	Type	Size, in.		Std.	Spec.							
F1238	Flat	8x1 $\frac{1}{4}$	5 $\frac{1}{2}$ x 3 $\frac{3}{4}$ x $\frac{3}{4}$	2 $\frac{3}{4}$	2, 2 $\frac{1}{2}$, 3	1 $\frac{1}{4}$	3 $\frac{3}{8}$	1	3	Unlimited	066 $\frac{1}{2}$	Easy spring

NARROW MORTISE BITTED KEY LOCKS FOR INTERIOR FRENCH DOORS

355 Flat and 358 Rabbeted Face Bitted Key Locks French Spring—These locks are similar except for difference in face. Latch bolt can be operated by knobs from either side at all times. In addition it has a dead bolt operated by keys from either side.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front and Strikes: Wrought brass.
Bolts: Cast brass.
Tumblers: Steel. Keys: Nickelplated steel.
Hub: Iron for $\frac{1}{8}$ -in. spindle.
Reversible: 355, yes; 358, no; specify hand.
Latch Construction: French Spring Type F.
Lock Width: 355, $\frac{7}{8}$ -in. more than backset; 358, $\frac{11}{8}$ -in. more than short side backset.

Note: The 358 lock has reversible rabbeted front.

Lock No.	Front		Size case, in.	Backset, in.		Strike, lip to center, in.	Spacing, in.	Tumblers	Keys	Changes	Latch bolt

355	Flat wrt. brass	5 $\frac{1}{4}$ x $\frac{7}{8}$	3 $\frac{5}{8}$ x 2 $\frac{1}{4}$ x $\frac{5}{8}$	1 $\frac{1}{2}$	1 $\frac{1}{4}$	1	2 $\frac{1}{8}$	1	1	12	French spring
358	Rab. wrt. brass	5 $\frac{1}{4}$ x 1 x $\frac{1}{2}$	3 $\frac{5}{8}$ x 2 $\frac{1}{4}$ x $\frac{5}{8}$	1 $\frac{1}{2}$	1 $\frac{3}{4}$	1	2 $\frac{1}{8}$	1	1	12	French spring

G381 $\frac{3}{4}$ Flat Face and G391 $\frac{3}{4}$ Rabbeted Face Bitted Key Locks With Latch and Dead Bolt, Gun Spring for Knobs or Lever Handle—For use with knobs or lever handles to operate latch bolt at all times. Lever handles should be used on outside.

In addition there is a dead bolt operated by key from either side at all times. The gun spring type of latch construction is especially adapted for use with lever handles.

Master Keying—Can be furnished in one set of 300, all different, or subdivided into 3 sets or less, with master key for each set and grand master for all.

G231 Flat Face and G291 Rabbeted Face Bitted Key Locks With Latch and Dead Bolt, Gun Spring, Lever Handle or Knob Inside—These locks have narrower backset than G381 $\frac{3}{4}$ and G391 $\frac{3}{4}$, requiring lever handle on outside and a lever handle or knob on inside to operate the latch at all times.

In addition there is a dead bolt operated by turn knob from one side only. The gun spring latch bolt construction makes it especially suited for use with lever handles.

GENERAL CONSTRUCTION

Case: Japanned iron.
Front and Bolts: Cast brass.
Strikes: Wrought brass.
Tumblers: G381 $\frac{3}{4}$ and G391 $\frac{3}{4}$, steel.
Keys: Nickelplated steel.
Hub: Brass. For $\frac{1}{8}$ -in. spindle.
Reversible: No, specify hand.
Latch Construction: Type G.
Lock Width: G381 $\frac{3}{4}$, G391 $\frac{3}{4}$ and G291, $\frac{3}{4}$ -in.; G231, $\frac{7}{8}$ -in. more than backset.

DISTINCTIVE RIM LOCKS

R&E
SINCE 1839

Cast Brass or Bronze

4500

4502

4501

4503

Numbers Indicate Lock Only; Specify Trim Desired

These RUSSWIN Rim Locks introduce in hardware a new interpretation of Old World design. Massive in appearance with a rugged durability, they are made—like all RUSSWIN Hardware—of the finest metals, brass or bronze, combined with RUSSWIN craftsmanship to insure a lifetime of trouble-free service.

The four designs shown herewith are the latest development of RUSSWIN, which for almost a century has been the pioneer of the “new” in hardware for the home.

In our concealed screw method of attaching to

the door you will not find any unsightly screws to mar the surface of these locks.

Operation—The latch bolt can be operated by knobs from either side at all times. In addition there is a dead bolt operated by key from either side.

GENERAL CONSTRUCTION

Case: Cast brass or bronze.

Bolts: Cast brass.

Strike: Box, cast brass or bronze.

Key: Brass.

Hub: Brass for $\frac{5}{8}$ -in. spindle.

Latch Construction: Type EC.

Reversible: No, specify hand.

CREMONE BOLTS

Cast Brass or Bronze

FOR DOORS OR WINDOWS
OPENING IN OR OUT

The illustrations show the bolts in a locked position as applied to doors or windows opening in or out, when the conditions permit of the use of the strikes shown. The bolts securely fasten the doors or windows at both top and bottom. A half turn of the knob or lever releases and withdraws both the top and bottom bolts.

Cremone bolts are priced on the basis of 8½-ft. doors and are regularly furnished with two end guides and two center guides.

SIZES OF CREMONE BOLTS

Handle, case, guides and strikes are cast brass or bronze.

Rods are solid brass or bronze.

Cat. No.	Type of handle	Rods, half oval, in.	Plates, width, in.
0737	Knob	½	1⅝
0737¼	Lever	½	1⅝

APPLICATION AND STRIKES

Strikes Shown Are for ⅝-Inch Rods to Meet Special Conditions

These strikes will be furnished, to order, in place of the regular strikes shown with bolts above. Can also be furnished, to order, for ½ inch rods.

When Ordering Specify—

- (1) Hand of sash.
- (2) Height of sash.
- (3) If sash opens in or out.
- (4) Width of stiles or astragal.

- (5) Distance from bottom of sash to proposed center of knob or lever.

Unless otherwise ordered, strikes as shown with the bolts above will be furnished. If special strikes are required, send full-size section of head, sill and meeting stiles.

The hand of cremone bolts should be taken from inside. Specify whether sash is hung on right or left-hand side and if opening in or out.

When used on French doors, between rooms, specify hand taken from the side on which bolt is to be applied.

Type	Description	Material	For sash	At	Type	Description	Material	For sash	At
B	Flat mortise	Cast brass or bronze	Opening in	Top	E	Angle mortise	Cast brass or bronze	Opening out	Top or bottom

RUSSWIN

DOOR CLOSERS

Features of Russwin Liquid Door Closer

Ease of Application—Can be applied to either a right-hand or left-hand door without reversing either the arm or spring, thus avoiding possibility of mistake in re-assembling.

Method of Attachment—Can be applied so that it will operate satisfactorily under almost every possible condition of construction.

The Spring—A flat wire-coil spring replaces old type round spring, thereby nearly doubling spring area.

The Valve—This gives a checking action which takes effect when the door is open at an angle of 90°.

The speed of the door is constant from 90° to closing point.

The Liquid—This is a non-freezing liquid in which the main working parts are immersed. Leakage is impossible.

Working Parts—All are malleable iron and drop forge steel.

The Piston—Piston is operated by crank and link construction which gives a perfectly smooth and even action.

Guarantee—It is guaranteed against faults in workmanship and imperfections in material.

Sizes, Finishes

Size A. For screen and light inside doors.

Russwin Door Closer

Size B. For inside doors not exceeding 3 feet in width.
Size C. For outside and vestibule doors, etc., not exceeding 2½ feet in width.

Size D. For outside doors not exceeding 3 feet in width.

Size E. For heavy outside doors exceeding 3 feet in width and large doors operated against strong draughts.

Size F. For extra heavy outside doors.

Size RC. Especially constructed for use on railroad car doors.

Note: The above specifications apply to doors under normal conditions. If the door is unusually heavy or is subject to very strong draught use one size larger than is specified.

Finishes—Regular finish: maroon bronze, symbol MB; silver bronze, symbol SB; dead black, symbol DB; olive green, symbol OG, and mahogany, symbol M. Maroon bronze furnished if not otherwise specified. Closers not furnished in oil paint finishes.

Sizes—Made in cast iron, unpolished in the following Nos.: A, B, C, D, E, F and RC.

Made in cast bronze or brass, unpolished in the following Nos.: AB, BB, CB, DB, EB, FB.

Weights—A, 42 lb.; B, 65 lb.; C, 84 lb.; D, 77 lb.

Closers can be made to templet, with machine screws. Also furnished with valve operated by key.

SPECIAL ARMS FOR RUSSWIN LIQUID DOOR CLOSERS

Russwin Automatic Friction Hold Open Arm—1

Can be applied to the regular Russwin Closer, eliminating the use of floor stops, hooks, or other devices generally used to hold the door open.

The holding device is located in the end of the arms and can be adjusted to hold the door at any desired angle. For either a right or left-hand door, same as the regular arm.

Section of Hold Open Arm—1

The main arm "A" has a friction surface "A-A" which comes in contact with the cam "B" attached to the loop or forearm "H." A brass disk inserted between these two friction surfaces prevents corrosion. The two surfaces are brought together when the door is opened and the cam "B" wedges between the arm "A" and the cam plate "C."

For closers with automatic friction hold open arms, suffix number dash one; i.e., 1, as A-1, B-1, etc.

For Fire Doors—RUSSWIN Closers for fire doors are furnished in sizes A1 to E1 with fusible equipped arms tested to operate at a low melting point.

For closers with fusible equipped arms, suffix "F" to number (thus A-1F).

Automatic Friction Hold Open Arm with Soffit Post Bracket

This hold open arm is for use on the *inactive* leaf of a pair of doors. It is made in three sizes only: for B, C and D closers.

Special Length Arms for Door Closers

Closer No.	Regular length of arm, in.	Special length arms, in.	Closer No.	Regular length of arms, in.	Special length arms, in.
A	8	10, 12	D	11	12, 14, 20
B	9	10, 12	E	12	14, 16, 20
C	10	12, 16, 20	F	13	14, 16, 20

Parallel Arms for Use with Storm or Screen Doors

Closer with parallel arms No. 34 is required when the closer is to be used in a narrow space, as for instance, between two doors. When closers are used in this manner hand of door must be given as they are not reversible.

The minimum space occupied by a closer when used in this manner is as follows:

Closer, size	A	B	C	D	E	F
Space, in.	4¼	4½	5	5½	6%	6%

Closer with Parallel Arms No. 34

For Description of Finishes, see Page 3

RUSSWIN**DOOR CLOSER BRACKETS****R&E**
SINCE 1839

Always Have the Closer Indoors Where Possible

Fig. 1

Fig. 1 shows the closer, as regularly furnished, applied on the inner or hinge side of door. This method of applying is recommended wherever the conditions permit.

Blocking Bracket No. 33—Should be used where the door is recessed $\frac{7}{8}$ in. or more beyond the surface of the casing. This bracket is furnished regular for doors recessed from $1\frac{1}{4}$ to $1\frac{3}{8}$ in. If recess is greater, same must be so specified. Where required and used the closer occupies its normal position and insures its satisfactory operation. (Same application as Fig. 1.)

Size	A	B	C	D	E	F
Bracket No.....	33A	33B	33C	33D	33E	33F

Soffit Bracket No. 27—Used where the door opens outward or where conditions are such that the closer can not be applied to the hinge side of door. Minimum space required for attaching is as follows:

Size	A	B	C	D	E	F
Space, in.....	$1\frac{3}{8}$	$1\frac{1}{2}$	$1\frac{5}{8}$	$1\frac{3}{4}$	$1\frac{5}{8}$	$1\frac{3}{4}$
Bracket No.....	27A	27B	27C	27D	27E	27F

Corner Bracket No. 28—Used under same conditions as described for No. 27. Does not require as much space as No. 27. is fastened at both the top and side, each angle securely braced gives a greater solidity to the closer. Minimum space required for attaching is as follows:

Size	A	B	C	D	E	F
Space, in.....	$\frac{7}{8}$	$\frac{7}{8}$	$1\frac{1}{8}$	$1\frac{1}{4}$	$1\frac{1}{8}$	$1\frac{1}{8}$
Bracket No.....	28A	28B	28C	28D	28E	28F

Flush Bracket No. 29—Used where soffit is not wide enough to furnish suitable footing for brackets No. 27 or 28.

Size	A	B	C	D	E	F
Bracket No.....	29A	29B	29C	29D	29E	29F

Straight Jamb Bracket No. 30—Used on segment, circle or gothic head doors where intermediate rails will permit, or if panel is thick enough to withstand strain. Similar to No. 27 closer, must be applied below point of radius. If insufficient headroom use Bracket No. 31 or No. 32.

Size	A	B	C	D	E	F
Bracket No.....	30A	30B	30C	30D	30E	30F

Half Circle Bracket No. 31—Suitable for use only on half circle or segment head doors when door is flush with or not recessed more than $1\frac{1}{4}$ in. beyond casing, and when top of door does not have an irregular radius. Not reversible, specify hand. Detail required where recess is greater than noted.

Size	A	B	C	D	E	F
Bracket No.....	31A	31B	31C	31D	31E	31F

Curved Jamb Bracket No. 32—For circle and gothic head doors, opening outward or where the conditions will not permit the closer to be applied to hinge side of door. Not reversible, specify hand. Detail required showing exact radius and location of closer indicated.

Size	A	B	C	D	E	F
Bracket No.....	32A	32B	32C	32D	32E	32F

Maroon Bronze furnished unless otherwise specified.

RUSSWIN SCREEN DOOR CLOSER No. 7

The RUSSWIN Screen Door Closer No. 7 resembles in appearance our regular line of door closers. It requires only $3\frac{1}{4}$ in. between the house door and the screen door. The width of rail required for inside application being $3\frac{1}{2}$ in. and for outside application $2\frac{1}{2}$ in.

The RUSSWIN Closer is reversible for either a right- or left-hand door, and can be applied inside, between the house door and screen door or on the

Closer No. 7 Applied on Outside of Door

outside, by simply removing the arm and placing it on the closer for the desired application as explained in the direction sheets and templates packed with each closer.

The speed of the door can be readily and accurately governed by means of the adjusting screw or valve, a turn to the left increasing, and a turn to the right decreasing its speed.

Maroon Bronze furnished unless otherwise specified.

RUSSWIN**AUTOMATIC GRIP TRANSOM LIFTERS**

Length—To determine the proper length of a transom lifter, deduct 5 ft. from the distance between the floor and the center of transom.

Reach—Nos. 30 to 55½: The distance from center of transom rod in position to center of transom rail.

Recess—The distance from face of door casing to face of transom.

Clearance—The distance from back of rod in position to face of door casing.

Width of bracket base is the measurement required on face of transom rail for attaching bracket.

Width of rod base is the measurement required on face of door casing for attaching rod guides and grip boxes.

Orders for transom lifters requiring "reach," "recess,"

"clearance," width of bracket base and width of rod base, other than the regular distance, should give these measurements.

If any mouldings or projections stand in the path of the transom lifter, a sketch showing position and projection of such obstructions will be necessary for making special guides, or risers and grip boxes.

RUSSWIN**GARAGE HARDWARE****R&E**
SINCE 1839

RUSSWIN Garage Hardware includes Adjustable Cylinder Locks for hinged and sliding doors, Self-latching Door Bolts, Self-adjusting Holders or Hold

Open Arms with or without shock absorbers, Extra Heavy Wrought Steel Strap Hinges and Door Pulls. The items are sold separately or in complete sets.

HARDWARE EQUIPMENT FOR GARAGE DOORS

For lasting satisfaction in the way of Garage Door equipment we recommend and suggest the following specifications:

Hinged Garage Doors—

Furnish and apply to each pair of Hinged Garage Doors:
1 RUSSWIN Adaptable Cylinder Lock No. 200.

2 pr. ball bearing extra heavy wrought steel strap hinges, 24 in.

1 pr. ball bearing extra heavy wrought steel strap hinges, 18 in.

1 only RUSSWIN Self-Latching and Adaptable Garage Door Bolt No. 1.

1 pair RUSSWIN Garage Door Holders or Hold-Open Arms with Shock Absorbers No. 3.

OR

RUSSWIN Garage Door Holders or Hold-Open Arms No. 2.

2 only RUSSWIN Door Pulls No. 2900.

Sliding Garage Doors—

Furnish and apply to each Single or Pair of Sliding Garage Doors:

1 only RUSSWIN Adaptable Cylinder Sliding Door Lock No. 300.

CYLINDER LOCKS FOR HINGED AND SLIDING DOORS**Hinged Garage Door Lock No. 200**

Size, in.	Backset, in.	Case and strike (protected)
5 5/8 x 4	3	Cast iron, dead black

**Inside View of No. 300****Adaptable Cylinder Garage Door Lock No. 200**

Self-latching hinged latch bolts with RUSSWIN adjustable unit cylinders for use on either right or left hand reverse bevel doors.

The feature of this lock is its adaptability to any position the door may assume, as a result of the natural tendency of wide heavy doors to sag.

The broad latching face on the strike affords a safe "grip" irrespective of the amount of sag that may take place on either door.

The case is of cast iron, size 4½ in. x 4 5/8 in. and has a stop to hold the latch retracted when desired. The backset is 3 in. The cylinder and cylinder collar are of bronze metal, and when applied to the door are flush with the stile, preventing any operation of the same, except by the regular change or master key to which it is subject.

The application is very simple—requiring only the boring of a 1½ in. hole through the door.

The cylinders of these locks may be master keyed or

grand master keyed with any other RUSSWIN cylinder locks, thus making it possible to have a number of garages under the control of one key, or the lock on the garage door may be made subject to the key of the residence lock.

Adaptable Cylinder Sliding Door Lock No. 300

Self-latching, broad-faced, hinged malleable iron latch bolts, which engage with the strike irrespective of any sag of the door.

The case is of cast iron size 5 5/8 in. x 4 in., and has a stop to hold the latch retracted when desired. A feature of this lock, which is exclusively RUSSWIN, is that the latch bolt when withdrawn by the key from the outside remains in a retracted position as long as the key remains in the lock, thus allowing the use of both hands for the operation of the door. The application and master keyable features are the same as the No. 200 lock.

For Description of Finishes, see Page 3

RUSWIN**SELF-ADJUSTING DOOR HOLDERS**

For Right or Left Hand Reverse Bevel Doors

R&E
SINCE 1830

Self-Adjusting Door Holder No. 2

Locked

Unlocked

(Hold-Open Arms)**No. 2 and No. 3**

Have the advantage of other door holders of this type, in that the self-adjusting feature provides for any sag of the door.

All working parts have been planned to allow perfect freedom and positive locking action, even on doors which have sagged.

The operation of either of these devices is as follows: A slight pull on the chain tilts the arm, disengages the locking lug and allows the arm to slide through the strike. When pressure is removed from the chain, the arm and locking lug drop into a locked position by gravity (see cut).

The No. 3 Holder is like the No. 2 with the addition of a shock absorbing spring, which takes the strain from the hinges as well as the holders, when doors are forcibly thrown open by either manual or wind pressure.

Finish—Wrought steel dead black.

Self-Adjusting Door Holder No. 3

Locked

Unlocked

SELF-LATCHING DOOR BOLT No. 1 (Patented)

For Right or Left Hand Reverse Bevel Doors

①

②

All and more than the name implies. The application is very simple, requiring but very little time to apply, and no mortising except for the bottom strike.

The contact of the latch at the top of the door with the strike throws the latch in a position whereby the bolt falls by gravity into the strike at the bottom of the door, and at the same time locks the lifting handle (see cuts 1 and 2) and also locks the lifting handle (see cut 4).

Each bolt has an adjustable telescopic rod which can be lengthened or shortened to the exact height of the door permitting an adjustment of 6½ in. and are regularly furnished suitable for doors measuring from 7 ft. 11½ in. to 8 ft. 6 in. in height (see cut 3).

Bolts can be fitted to doors less than 7 ft. 11½ in. in height by cutting off bottom of rod.

When the door is closed and locked in position, the act of lifting the handle automatically disengages the latch from the top strike, and the bolt from the bottom strike, and lifting the handle also holds the bottom bolt and the top latch in a retracted position until the latch again comes in contact with the strike.

The feature of this bolt is that one manual operation is all that is required on the RUSWIN self-latching bolt against four, when chain and foot bolts are used.

RUSSWIN**FIRE EXIT DEVICES****R&E**
SINCE 1838

RUSSWIN Fire Exit Devices comprise Automatic Fire Exit Bolts with strikes of various types, Auto-

matic Door Holders and Mortise Locks arranged for operation by the fire exit bolts.

RUSSWIN FIRE EXIT BOLTS**General**

RUSSWIN Fire Bolts are designed for use on exterior and interior doors in auditoriums, dormitories, halls, schools, theaters and any building where a *safe and sure exit* is desired at any time.

They are automatic in action, the slightest pressure, a light touch, on the bar or lever on the inside of the door, automatically and instantly releases the lock and the bolts, at all times.

Outstanding Features and Advantages

RUSSWIN Fire Exit Bolts have the rotary action, a strictly RUSWIN feature, permitting the positive operation of the locking devices under either a *very slight pressure* or a *great or unusual pressure*.

This feature, together with the fact that the bar operates the locking mechanism, *either from a pull or a push*, assures immediate opening of the door under the worst panic conditions.

Being automatic and sure in action they furnish the same protection afforded by the employment of two or more watchmen or doormen, with the added assurance that their services are constant and uninterrupted.

They are on duty twenty-four hours a day, never tire, and are always ready when the occasion demands.

The use of these bolts which are automatic in action, makes it unnecessary for exit doors to be left open or unlocked at such times as is required by many city ordinances.

On school buildings the janitor can lock the latching bolts or locking devices in a retracted position, thus preventing children from playing with same during recess period.

Bolts used for exit only, that are in daily use, as for example on theater exit doors, have self-latching bolts, which, after closing a door, automatically locks it. No particular care and inspection is required to be certain that the doors are properly locked after being used, as the bolts function automatically.

The fact that RUSWIN Fire Exit Bolts are automatic

and are held in a retracted position, until the doors are closed, makes it possible to use standard strikes on all types. This eliminates the necessity of detailing sills and head jambs and the furnishing of special strikes.

Types and Finishes

RUSWIN Fire Exit Bolts may be obtained for single or double doors used both for entrances as well as exits, and for exits only with the following equipment:

Those which are described for use on entrance doors are equipped with either handles or knobs, controlled by keys on the outside to match in design and keyed alike or master keyed with other RUSWIN locksets.

For exit doors only, furnished without trim on the outside. See Pages 74, 75 and 76.

Any of these bolts may be supplemented with the following:

Bar locking devices for holding the bar in a depressed position; recommended for school buildings. See Page 76.

Dustproof, self-closing bottom strikes. See Page 76.

Automatic door holders. See Page 76.

All RUSWIN Fire Exit Bolts may be obtained in both brass and bronze, polished and unpolished, in a variety of finishes.

General Notes on Construction

All RUSWIN Fire Exit Bolts have compensating bottom latches on the bottom rods, working independently of the rod. This feature prevents intrusion from the outside even when the bottom latch has been worked out of the bottom strike or keeper, or in the event of the keeper being plugged or filled and preventing the latch from engaging in it.

Bolts with which locks Nos. 9452, 9458, 0444 $\frac{3}{4}$ or 0440 are used should have stiles at least 4 $\frac{1}{2}$ in. wide.

We recommend split astragals, as per sketch below, on all pairs of doors equipped with RUSWIN Fire Exit Bolts, except on the numbers covering bolts equipped with a connecting crossbar.

On bolts with connecting crossbars a T astragal should be used.

Information for Specifying

Specify number of bolt and finish, also:

- (1) Width of door between stops.
- (2) Height of door between threshold and stop.
- (3) Width of stile.
- (4) Thickness of door.
- (5) Give detail of astragal.
- (6) Specify if for right or left hand reverse bevel door taken from *outside*.
- (7) When sill is not flat show section through it with relation to door.
- (8) Distance from floor to center of crossbar should be 38 in.
- (9) If pairs of doors are used specify hand of door on which lock is applied.

RUSWIN**DOUBLE ACTING BARS FOR DOUBLE DOORS****R&E**
SINCE 1839**Top and Bottom Latching Bolts for One Standing and One Active Leaf with Trim Outside**

Operation—From inside; a touch or pull on the bar instantly releases both bolts at all times. No. 65 is operated from outside by knob except when knob is deadlocked by key, through cylinder on outside. Can be unlocked from outside by means of the key. Can be master keyed, grand master keyed in sets, or keyed alike with other RUSWIN cylinder locks.

No special lip strikes are required as the bolts, when withdrawn, are automatically held retracted. Bolts are thrown when trip on top of case contacts with the strike.

No. 63x65

Bolt No.	Dimensions, in.				Wt., lb.	Lock type	Outside trim
	Bar	Rods	End cases	Center case			
63x65	1	1/2	1 1/2 x 2 1/8	8 1/2 x 2	32	Cylinder	Cast bronze knob and escutcheon

Top and Bottom Latching Bolts for Exit Only with no Trim Outside—Operate from Inside Only

A touch or a pull on the bar instantly releases both bolts, at all times.

These bolts have top and bottom latching feature only, require no lock, are operated from inside only and do not have any outside trim. The bolts are operated by the crossbar on both doors.

For these types of bolts, use "T" astragals.

Not suitable for doors having flat-faced meeting stiles or doors equipped with split astragals.

No. 260

Bolt No.	Dimensions, in.				Weight, lb.
	Bar	Rods	End cases	Center case	
260	1	1/2	1 1/2 x 2 1/8	8 x 2	24

Not reversible; specify hand of door. For information to determine hand of door see Page 38.

SINGLE ACTING BAR FOR SINGLE DOOR**Side Latching Rim Bolt**

Especially suitable for hollow metal doors or wood doors too thin for mortise lock.

Operation—From inside; a touch on the bar at any point instantly releases the latch bolt at all times. Can be unlocked from outside by means of key only. Can be master keyed, grand master keyed in sets or keyed alike with other RUSWIN Cylinder Locks. Equipped with locking device in active case which holds bar in rigid, depressed position and thus holds latch bolt retracted. Latch bolt is of the easy closing, swinging construction with 3/4-in. throw.

Lip of strike furnished 1/4 in. beyond thickness of door unless otherwise specified.

Outside Trim

No. 556

Bolt No.	Dimensions, in.			Outside trim	Weight, lb.
	Bar	End case	Center case		
556	1	4 1/2 x 1 3/4	7 1/4 x 2 3/4	Door pull 627 Enfield, cut for 1290 night latch cylinder	7 1/2

Not reversible. Specify hand and thickness of door.

For Description of Finishes, see Page 3

RUSSWIN**FIRE EXIT BOLTS FOR SINGLE EXIT
AND ENTRANCE DOORS****R&E**
SINCE 1899**DOORS OPERATE FROM INSIDE OR OUTSIDE AS SHOWN—HAVE CENTER CATCH****Push Lever Type**No. 96
OutsideNos. 97 and 98
OutsideNo. 99
OutsideNos. 96, 97,
98 and 99
Inside

No. 99

Bolts Nos. 96, 97 and 98 can be operated from the outside, by knob or handle, except when it is deadlocked by key on outside. Bolt No. 99 requires no lock, is operated from inside only and has no outside trim.

Bolt No.	Case, in.	Lock No.	Outside trim
96	8x2	9452	Cast bronze handle
97	8x2	9458	Cast bronze knob and escutcheon
98	8x2	0444½	Wrought bronze knob and escutcheon
99	8x2	0440	None

DETAILS OF TOP AND BOTTOM STRIKES AND LOCKS**TOP STRIKE**

Top strike No. 1T is so designed as to eliminate the necessity for any special detailing of head jambs, and is standard for all Russwin fire exit bolts.

When the bar of any Russwin top and bottom latching fire exit bolt is depressed and the door

Top Strike 1T
for Bolt 60

Unlocked

Locked

**Top Strike
and Top Bolt
in Operation**

opened, the bolt is automatically held retracted; thus no special lip strikes are required.

When the bar is released and the door closes, the trips on the top case contacts with the strike and throws the bolts into the locked position again. These operations are clearly shown in the accompanying illustrations.

BOTTOM STRIKES, STOPS AND SIDE LATCH STRIKEBottom Strike 1B
for Bolt 60Flanged Bottom Strike
for Double Doors
No. 5BStop for Bottom of an
Active Door
No. 2BDustproof Bottom Strike
for Single Doors
No. 4BDustproof Bottom Strike
for Double Doors
No. 3B

These strikes require no special arrangement for their installation on the threshold, except where a bronze threshold is used.

Strike No. 2B is furnished with bolts 66, 67, etc., and strike No. 5B with 60, etc., only when orders specify for double doors; otherwise strikes as illustrated with the bolts will be furnished.

Open Back
Lock Strike**BAR LOCKING DEVICES WITH KEY****FOR LOCKING BAR IN DEPRESSED POSITION—USED PRINCIPALLY FOR SCHOOLS**

The bar locking device No. 81 is especially designed for use in schools.

It is made of bronze in natural and lacquered brass and bronze finishes; also nickel, brass and bronze plated finishes. It consists of a locking mechanism and lever which can be dropped down to hold the bar in a depressed position until released by unlocking.

Bar Unlocked

Bar Depressed and
Locked**Bar Lock No. 81**

For Description of Finishes, see Page 3

When ordering specify number of bolt for which required.

Center Case Locking Device—All Russwin fire exit bolts, with horizontal bar, can be equipped with center case locking device, without extra charge.

We recommend No. 81 device where conditions will permit its use.

RUSSWIN**AUTOMATIC DOOR HOLDERS****R&E**
SINCE 1839**1010****IRON BASE DOOR HOLDER**

Holder, No.	Height, in.	Base, in.	Strike, in.	Finish	
				Base	Latch and strike
1010	9 1/2	7x6 1/8	4 3/8 x 3 1/8	Iron Finish 47	Cast brass, unpolished

Packed with steel lag screws and expansion shields for base, and screws for strike.

Designed for use on doors equipped with fire exit bolts and door checks, and for installation on the floor.

They are of heavy construction, nicely finished and operate in such a way as to engage and hold the door firmly.

**104 3/8 to 110 1/4****CAST BRONZE DOOR HOLDERS**

Holder No.	Height, in.	Base, in.	Strike in.
104 3/8	4 3/8	6x5	4x2 3/8
106 1/2	6 1/2		
109 3/4	9 1/4		
110 1/4	10 1/4		

Bronze lag screws and expansion shield for base, and screws for strike.

MORTISE LOCKS FOR USE WITH FIRE EXIT BOLTS

These mortise locks are especially designed for use on RUSSWIN fire exit bolts, described on the preceding pages.

The fire exit bolts operate the latch bolts with a rotary motion, insuring instant and certain action.

Cylinder Lock No. 9452 and 9458 are for entrance doors

and can be master keyed in any RUSSWIN cylinder lock system. The latch bolts on these locks can be held retracted by means of the key.

Lock No. 0444 3/4 is for entrance doors and can be master keyed in RUSSWIN bitted key system.

Lock No. 0440 is for exit doors only.

**Lock No. 9452****Lock No. 9458****Lock No. 0444 3/4****Lock No. 0440**

Operation—Lock 9452—Latch bolt can be operated from inside at all times by the slightest pressure on bar or lever pad, and by the thumb piece from outside, except when it is deadlocked by key. The thumb piece is automatically deadlocked when latch bolt is withdrawn by key and remains so until unlocked by a reverse throw of key. To hold latch bolt in a retracted position, first withdraw latch bolt by thumb piece, and lock it by turning key toward face of lock. Auxiliary latch automatically deadlocks and safeguards latch bolt, preventing it from being retracted by any instrument inserted between face of lock and strike.

Operation—Lock 9458—Similar in every detail to lock 9452, except operated by knob on outside.

Operation—Lock 0444 3/4—Latch bolt can be operated from inside at all times by the slightest pressure on bar or lever pad, and by knob from outside, except when it is deadlocked by key. When knob is unlocked the auxiliary latch is held in a retracted position. When knob is locked the auxiliary latch is released, and it automatically deadlocks and safeguards the latch bolt, preventing it from being retracted by any instrument inserted between face of lock and strike.

Operation—Lock 0440—Latch bolt can be operated from inside at all times by the slightest pressure on bar or lever pad.

If outside trim is used, latch bolt can be operated from outside at all times by knob.

Case: Japanned iron.

Fronts, Bolts, Strikes: Cast bronze.

Cylinder: (Bronze, Locks 9452 and 9458.)

GENERAL CONSTRUCTION

Keys: Locks 9452 and 9458, liberty silver; Lock 0444 3/4, bitted, nickelplated steel.

Hub: Brass.

Reversible: No, specify hand.

Hardware Works of Sargent & Company at New Haven, Conn., U. S. A.

Selection of Hardware

Hardware is a necessary part of the equipment of every building. No single detail of architecture is of more importance; nothing in the building gets so much use. It attracts the eye strongly because in color and material it furnishes the element of contrast, making harmony very essential; its constant use and prominence emphasize the importance of care in its selection. We have endeavored to list on the pages that follow various designs and styles of Sargent Artistic Hardware which we trust will be a practical guide to the Architect, Specification Writer, Contractor and Builder in the selection of suitable hardware trimmings.

Trade Marks

All numbers, letters and fanciful or non-descriptive names, originally and arbitrarily applied by us to articles of Hardware for the purpose of identifying the goods as of our manufacture, are our Trade Marks.

These Trade Marks have been acquired by us by arbitrary adoption and use, by due advertising, by the general acquiescence of the trade, and have been confirmed to us whenever tested by suits at law.

We caution all persons against using any of our Trade Marks except when used for the purpose of indicating that the goods with which they are associated were manufactured by us.

Prices

The prices used in connection with each article are printed for a comparison of value and should not be used otherwise.

SARGENT**Description of Finishes**

The Finish Letters Given Below Should Be Prefixed to the Numbers of the Goods Wanted

The U. S. Numbers, Which Are Also Printed, Should Not Be Used in Ordering

FINISHES ON IRON AND STEEL

Prefix finish letters	U. S. numbers	Description of finishes
Iron and Steel		
No prefix	US1B	Japanned
No prefix	US2	Galvanized
No prefix	Copper plated
J	US1D	Dead black japanned
T	Tuscan bronzed
BN	US19	Sanded dull black

"Rustproof Iron" Finish

BB	US18	Rustproof black. This is a black finish, so durable as to be commonly known to the trade as rustproof, but it is not a finish that will stand exposure to the weather in damp climates or localities, and for that reason it is recommended particularly for inside work. Under ordinary conditions in dry climates, either for inside or outside use, it is substantially rustproof.
----	------	--

Bronze Finishes

P	US9	Bright bronze plated.
OP	US10	Dull bronze plated.
RP	US12	Sanded bronze plated, oxidized and relieved.
R8P	US13	Sanded bronze plated, oxidized and relieved. Raised ornamentation polished. Not suitable for plain goods. Use RP finish for plain goods to match.
A*	US20	Statuary bronze plated.
RA*	US21	Sanded statuary bronze plated.
AB	US8	Antique copper plated.
A3B*	US20A	Statuary bronze plated, dark.
A5B	US8	Antique copper plated, oxidized and relieved.

Brass Finishes

B	US3	Bright brass plated.
OB	US4	Dull brass plated.
OE	US5	Dull brass plated oxidized and relieved. Not suitable for plain goods. Use OB finish for plain goods to match.
RD	US6	Sanded brass plated, oxidized and relieved.
R7D	US7	Sanded brass plated, oxidized and relieved raised ornamentation polished. Not suitable for plain goods. Use RD finish for plain goods to match.

Nickel Finishes

N	US14	Bright nickel plated.
LN	US15	Dull nickel plated.
L5N	US15	Dull nickel plated oxidized and relieved. Not suitable for plain goods. Use LN finish for plain goods to match.
RN*	US16	Sanded nickel plated.
R7N	US17	Sanded nickel plated raised ornamentation polished. Not suitable for plain goods. Use RN finish for plain goods to match.
HF*	US spec.	Dark nickel plated, imitation half polished iron, oxidized and relieved. Iron and steel goods except steel butts can be furnished in HF finish.

Enameled Finishes

E	White enameled. Suitable only for goods so listed.
EA	Statuary bronze enameled.
EN	Aluminum bronze enameled.
EOB	Dull brass enameled.
EOP	Dull bronze enameled.
ERD	Oxidized brass enameled.
ERP	Oxidized bronze enameled.
EVA	Verde antique enameled. Suitable only for door closers.

FINISHES ON BRONZE AND BRASS

Prefix finish letters	U. S. numbers	Description of finishes
Bronze Finishes		
P	US9	Bright bronze.
NLP*	Bright bronze not lacquered.
OP	US10	Dull bronze.
O3P	US spec.	Dull bronze, oxidized and oil rubbed.
O6P	US11	Dull bronze, oxidized and relieved.
RP	US12	Sanded bronze, oxidized and relieved.
R8P	US13	Sanded bronze, oxidized and relieved. Raised ornamentation polished. Not suitable for plain goods. Use RP finish for plain goods to match.
A*	US20	Statuary bronze.
RA*	US21	Sanded statuary bronze.
OF*	US spec.	Statuary bronze, dark oxidized and oil rubbed.
AB	US8	Antique copper.
A3B*	Statuary bronze, dark.
A5B	US8	Antique copper, oxidized and relieved.

Brass Finishes

B	US3	Bright brass.
NLB*	Bright brass not lacquered.
OB	US4	Dull brass.
O3B*	US spec.	Dull brass oxidized and oil rubbed.
OE	US5	Dull brass oxidized and relieved. Not suitable for plain goods. Use OB finish for plain goods to match.
RD	US6	Sanded brass, oxidized and relieved.
R7D	US7	Sanded brass, oxidized and relieved. Raised ornamentation polished. Not suitable for plain goods. Use RD finish for plain goods to match.

Nickel Finishes

N	US14	Bright nickel plated.
LN	US15	Dull nickel plated.
L5N	US15	Dull nickel plated oxidized and relieved. Not suitable for plain goods. Use LN finish for plain goods to match.
RN	US16	Sanded nickel plated.
R7N	US17	Sanded nickel plated raised ornamentation polished. Not suitable for plain goods. Use RN finish for plain goods to match.
HF	US spec.	Dark nickel plated, imitation half polished iron oxidized and relieved. Particularly suitable for door handles. Particularly suitable for push buttons.

Miscellaneous

BN*	US19	Sanded dull black.
NF	Nubian, forge finish.
VF	Verde finish, dark green.
VA*	US22	Verde antique.
LS*	US23	Dull silver plated, oxidized and relieved.
G*	US24	Dull gold plated.
EM*	US25	White bronze.
DEM*	Dull white bronze.
CM*	Chromium plated (furnished on brass or bronze only).
DCM*	Dull chromium plated (furnished on brass or bronze only).

Finishes marked with an asterisk () are seldom used and we do not carry them in finished stock. There will be a delay in furnishing and orders are taken with the understanding that the goods must be made after receipt of order.

Proprietary Design Hardware

Door Knob and Escutcheon
Made for Union Trust
Building, Detroit,
Mich.

The two designs illustrated are proprietary designs conceived by architects for individual buildings. They are examples of special work we are prepared to undertake.

Union Lock Set Made for Fisher Building,
Detroit, Mich.

MP Design
Union Lock Sets

Special Design Hardware

For large and important work, we are prepared to co-operate with architects in the production of hardware in special designs to harmonize with the architectural style of the building and carrying out the ideas of the architect.
